Contents	2		
Index of Tables	3		
Introduction	2		
Basis of disclosure	2	CCR risk approach	77
Governance and Management Attestation	2	Credit valuation adjustment risk	83
Regulatory framework	2	Securitisations	85
Comparative figures	2	Valuation and accounting policies	85
Disclosure requirements changes in 2025	2	Regulatory capital methodology	85
Disclosure requirements changes as of 2026	2	Investor securitisations	85
Scope of consolidation	3	Sponsor securitisations	86
Capital requirement	5	Originator securitisations – liquidity and funding purposes	86
Economic and Regulatory Capital	5	Originator securitisations – risk and regulatory capital purposes	86
Capital Adequacy	5	Securitisation Exposure	87
Key Metrics	7	Market Risk	94
Output floor	9	Prudent Valuation Adjustments	105
Countercyclical buffer	10	Funding and liquidity risk	106
Own funds	15	Asset encumbrance	106
Leverage ratio	18	Liquidity requirements	109
TLAC and MREL	22	Environmental social and governance risk	116
Credit Risk	26	Environmental Risk	116
Basis and scope of presentation	26	Social Risk	119
Credit risk management objectives and policies	26	Governance Risk	121
Credit risk approach	27	Climate change Transition risk	122
Credit risk capital	27	Climate change physical risk	130
Credit risk measurement	28	Other risks	138
Credit risk tools	28	Non-financial risk	138
Credit quality	31	Crypto assets	140
Credit risk mitigation	43	Compliance risk	140
Counterparty Credit Risk	77	Remuneration	141
		Introduction	141
		Qualitative information	141
		Quantitative information	146

Appendices	149	Disclaimer	179
Appendix B: EU LI 3: Outline of the differences in the scopes of consolidation (entity by entity)	149		
EU CCA: Main features of regulatory own funds instruments and eligible liabilities instruments, at 31 December 2025	161		
TLAC: Other TLAC eligible instruments' main features, at 31 December 2025	166

Type	Template	Template description	Page / location
Scope of consolidation	EU LI1	Differences between the accounting scope and the scope of prudential consolidation and mapping of financial statement categories with regulatory risk categories	<u>3</u>
	EU LI2	Main sources of differences between regulatory exposure amounts and carrying values in financial statements	<u>4</u>
	EU LI3	Outline of the differences in the scopes of consolidation (entity by entity)	<u>149</u>
Capital requirements	EU OV1	Overview of total risk exposure amounts	<u>6</u>
	EU KM1	Key metrics template	<u>7</u>
	EU CMS1	Comparison of modelled and standardised risk weighted exposure amounts at risk level	<u>9</u>
	EU CMS2	Comparison of modelled and standardised risk weighted exposure amounts for credit risk at asset class level	<u>10</u>
	EU CCyB1	Geographical distribution of credit exposures relevant for the calculation of the countercyclical buffer	<u>11</u>
	EU CCyB2	Amount of institution-specific countercyclical capital buffer	<u>14</u>
Own funds	EU CC1	Composition of regulatory own funds	<u>15</u>
	EU CC2	Reconciliation of regulatory own funds to balance sheet in the audited financial statements	<u>18</u>
	EU CCA	Main features of regulatory own funds instruments and eligible liabilities instruments, at 31 December 2025	<u>161</u>
Leverage ratio	EU LR1	LRSum: Summary reconciliation of accounting assets and leverage ratio exposures	<u>19</u>
	EU LR2	LRCCom: Leverage ratio common disclosure	<u>19</u>
	EU LR3	LRSpl: Split-up of on balance sheet exposures (excluding derivatives, SFTs and exempted exposures)	<u>21</u>
TLAC	EU KM2	Key metrics – MREL and, where applicable, G-SII Requirement for own funds and eligible liabilities	<u>22</u>
	EU TLAC1	Composition – MREL and, where applicable, the G-SII Requirement for own funds and eligible liabilities	<u>23</u>
	EU TLAC3	Creditor ranking – resolution entity	<u>25</u>
Credit in general	EU CR1	Performing and non-performing exposures and related provisions	<u>32</u>
	EU CR1-A	Maturity of exposures	<u>34</u>
	EU CR2	Changes in the stock of non-performing loans and advances	<u>34</u>

	EU CQ1	Credit quality of forborne exposures	<u>35</u>
	EU CQ3	Credit quality of performing and non-performing exposures by past due days	<u>37</u>
	EU CQ4	Quality of non-performing exposures by geography	<u>39</u>
	EU CQ5	Credit quality of loans and advances by industry	<u>42</u>
	EU CR3	CRM techniques overview: Disclosure of the use of credit risk mitigation techniques	<u>44</u>
	EU CQ7	Collateral obtained by taking possession and execution processes	<u>44</u>
	EU CR8	RWEA flow statements of credit risk exposures under the IRB approach	<u>45</u>
	EU CR6-A	Scope of the use of IRB and SA approaches	<u>45</u>
Credit risk and CRM in the IRB approach	EU CR6	IRB approach – Credit risk exposures by exposure class and PD range	<u>47</u>
	EU CR7	IRB approach – Effect on the RWEAs of credit derivatives used as CRM techniques	<u>57</u>
	EU CR7A	IRB (specialised lending and equities)	<u>58</u>
	EU CR9	IRB approach – Back-testing of PD per exposure class (only for PD estimates according to point (f) of Article 180(1) CRR)	<u>62</u>
Equity exposures under the simple risk weighted approach	EU CR10.5	Specialised lending and equity exposures under the simple risk weighted approach	<u>69</u>
Credit risk and CRM in the standardised approach	EU CR4	Standardised approach – Credit risk exposure and CRM effects	<u>71</u>
	EU CR5	Standardised approach	<u>73</u>
CCR	EU CCR3	Standardised approach – CCR exposures by regulatory exposure class and risk weights	<u>77</u>
	EU CCR4	IRB approach – CCR exposures by portfolio and PD scale	<u>78</u>
	EU CCR5	Composition of collateral for CCR exposures	<u>79</u>
	EU CCR8	Exposures to CCPs	<u>80</u>
	EU CCR6	Credit derivatives exposures	<u>80</u>
	EU CCR1	Analysis of CCR exposure by approach	<u>81</u>
Credit Valuation	EU CVA1	Credit valuation adjustment risk under the Reduced Basic Approach (R-BA)	<u>82</u>
	EU CVA3	Credit valuation adjustment risk under the Standardised Approach (SA)	<u>83</u>
	EU CVA4	RWEA flow statements of credit valuation adjustment risk under the Standardised Approach (SA)	<u>83</u>
Securitisations	EU-SEC1	Securitisation exposures in the non-trading book	<u>86</u>
	EU-SEC3	Securitisation exposures in the non-trading book and associated regulatory capital requirements - institution acting as originator or as sponsor	<u>88</u>

	EU-SEC4	Securitisation exposures in the non-trading book and associated regulatory capital requirements - institution acting as investor	<u>89</u>
	EU-SEC5	Exposures securitised by the institution - Exposures in default and specific credit risk adjustments	<u>91</u>
Market risk	EU MR1	Market risk under the standardised approach	<u>92</u>
	EU MR2-A	Market risk under the IMA	<u>93</u>
	EU MR2-B	RWA flow statements of market risk exposures under an IMA	<u>93</u>
	EU MR3	IMA values for trading portfolios	<u>95</u>
	EU MR4	Consolidated trading HVaR	<u>96</u>
	EU IRRBB1	Interest rate risks of non-trading book activities	<u>97</u>
	EU IRRBBA	Qualitative information on interest rate risks of non-trading book activities	<u>98</u>
	EU PV1	Prudent valuation adjustments (PVA)	<u>101</u>
Asset encumbrance	EU AE1	Encumbered and unencumbered assets	<u>102</u>
	EU AE2	Collateral received and own debt securities issued	<u>103</u>
	EU AE3	Sources of encumbrance	<u>104</u>
	EU AE4	Accompanying narrative information	<u>104</u>
LCR	EU LIQ 1	Quantitative information of LCR	<u>106</u>
	EU LIQB	Qualitative information on LCR	<u>108</u>
	EU LIQ2	Net Stable Funding Ratio	<u>109</u>
Environmental social and governance	ESG 1	Banking book- Climate Change transition risk: Credit quality of exposures by sector, emissions and residual maturity	<u>119</u>
	ESG 2	Banking book - Climate change transition risk: Loans collateralised by immovable property - Energy efficiency of the collateral	<u>123</u>
	ESG 3	Banking book - Climate change transition risk: Alignment metrics	<u>124</u>
	ESG 4	Banking book - Climate change transition risk: Exposures to top 20 carbon-intensive firms	<u>125</u>
	ESG 5	Banking book - Climate change physical risk: Exposures subject to physical risk	<u>127</u>
Operational risk	EU OR1	Operational risk own funds requirements and risk-weighted exposure amounts	<u>136</u>
	EU OR2	Business Indicator, components and subcomponents	<u>136</u>
	EU OR3	Operational risk own funds requirements and risk exposure amounts	<u>136</u>
Remuneration	EU REM1	Remuneration awarded for the financial year	<u>143</u>
	EU REM2	Special payments to staff whose professional activities have a material impact on institutions' risk profile (identified staff)	<u>143</u>

	EU REM3	Deferred remuneration	<u>145</u>
	EU REM4	Deferred remuneration	<u>144</u>
	EU REM5	Information on remuneration of staff whose professional activities have a material impact on institutions' risk profile (identified staff)	<u>146</u>

Introduction

Basis of disclosure

The information in this report relates to ING Groep N.V. and all of its subsidiaries (hereafter ING) on a consolidated basis as required by Capital Requirements Regulation (EU) No 575/2013 on prudential requirements for credit institutions and investment firms (Part Eight) and the final draft Implementing Technical Standards (ITS) on public disclosures by institutions of the information referred to in Titles II and III of Part Eight of Regulation (EU) No 575/2013.

Governance and Management Attestation

The Pillar III disclosures have been subject to our internal control framework, to ensure compliance with laws and regulations. The Disclosure Committee (DisCom), responsible for all our disclosures, assesses the accuracy of the content before reporting its conclusions to the Audit Committee (AC) for review and submission to the Supervisory Board for final approval. This report has not been audited by our external auditor.

Throughout the year, ING maintains disclosure controls and procedures to support the appropriateness of the Pillar 3 disclosures. In line with the ITS and the mapping tool as provided by EBA, the templates in this report have been aligned to other supervisory reporting and reconciliation was executed against regulatory reporting to ECB such as Corep, Finrep and TLAC.

Regulatory framework

CRR III entered into force on 1 January 2025, aligning EU prudential rules with Basel III. The EBA published revised ITS in June 2024, introducing new disclosure formats aimed at improving transparency and comparability. Pillar 3 complements Pillar I (minimum capital requirements) and Pillar II (ICAAP/ILAAP under the Supervisory Review and Evaluation Process), supporting market discipline through enhanced disclosures.

ING's Additional Pillar III Report provides information on regulatory capital, credit and counterparty credit risk, securitisations, market risk, liquidity risk, non-financial and compliance risks, as well as exposure and RWA developments. Templates follow EBA ITS requirements, and the report should be read alongside the Annual Report's Risk Management section. ING prepares the Pillar III report in accordance with the CRR III.

Comparative figures

Comparative Figures ING provides prior-year comparatives where relevant and explains year-on-year movements. Where disclosures have been enhanced, or are new, we do not generally restate or provide prior year comparatives. Wherever specific rows and columns in the tables prescribed by the EBA are not applicable or immaterial to our activities, we omit them and follow the same approach for comparative disclosures.

Disclosure requirements changes in 2025

Final draft ITS on public disclosures by institutions of the information referred to in Titles II and III of Part Eight of Regulation (EU) No 575/2013

In June 2024, the EBA final draft ITS was introduced with revised templates to align with Basel III implementation (Step 1). The main changes to the Pillar 3 framework included new templates and revisions to reflect the output floor and its impact on risk-weighted exposure amounts, updates to credit risk templates for both Standardised and IRB Approaches, and a major overhaul of market risk disclosures aligned with the Fundamental Review of the Trading Book (FRTB). New templates are introduced for credit valuation adjustment (CVA) risk and operational risk, which now rely on the Business Indicator Component (BIC).

First disclosures were due in March 2025 for large institutions, with most requirements applicable from June 2025.

Disclosure requirements changes as of 2026

In May 2025, the EBA launched a consultation on a new ITS focusing, among others, on ESG risks and equity exposures, aiming to improve transparency and comparability while reducing reporting complexity. The consultation paper draft ITS is expected to be applicable as of December 2026.

For ESG risks, disclosure scope will broaden to large non-listed institutions, SNCIs, other institutions and large subsidiaries. A proportionate framework introduces three template sets: comprehensive (large institutions), simplified (other listed institutions and large subsidiaries) and basic (SNCIs and other non-listed institutions). The proposal aligns with the EU Taxonomy Regulation and includes transitional measures allowing adoption by end-2026. Existing ESG rules remain applicable for large listed institutions until year end 2026, except for GAR templates, which are suspended. In August 2025, the EBA issued a no-action letter confirming the postponement of ESG Templates 6–10 as well as related Climate Change Mitigation (CCM) columns in Templates 1 and 4. Consequently, these templates are not included in this publication.

The EBA expects to finalise and submit the ITS to the European Commission in 2026.

Scope of consolidation

The scope of consolidation for regulatory purposes is consistent with the scope of consolidation for accounting purposes as applied for IFRS, with the exception of subsidiaries consolidated under EU IFRS but active in other sectors than banking and finance. The approach for the scope of consolidation for accounting purposes is reported in the annual accounts in Note 1 'Basis of preparation and significant materiality'.

The following table shows the relationship between the categories in the financial statements and the regulatory risk categories in accordance with prudential requirements.

EU LI1 - Differences between the accounting scope and the scope of prudential consolidation and mapping of financial statement categories with regulatory risk categories

2025	Carrying values as reported in published financial statements	Carrying values under scope of prudential consolidation	Carrying values of items				Not subject to own funds requirements or subject to deduction from own funds
			Subject to the credit risk framework	Subject to the CCR framework	Subject to the securitisation framework	Subject to the market risk framework	
Breakdown by asset classes according to the balance sheet in the published financial statements							
Cash and balances with central banks	52,889	52,889	51,133				1,756
Loans and advances to banks	21,204	21,204	14,383	6,803			18
Financial assets at fair value through profit or loss	133,157	133,157	7,709	95,831		29,617	
Financial assets at fair value through other comprehensive income	56,662	56,662	56,662				
Securities at amortised cost	53,867	53,867	49,153		5,120		-406
Loans and advances to customers	721,705	721,705	707,620	5,085	13,443		-4,443

Investments in associates and joint ventures	1,607	1,671	1,671				
Property and equipment	2,478	2,478	2,478				
Intangible assets	1,510	1,510	313				1,197
Current tax assets	458	457	457				
Deferred tax assets	893	893	893				
Other assets	7,810	7,810	7,810				
Assets held for sale	164	164	164				
Total assets	1,054,405	1,054,468	900,447	107,720	18,563	29,617	-1,878
Breakdown by liability classes according to the balance sheet in the published financial statements							
Deposits from banks	18,517	18,517					18,517
Customer deposits	721,367	721,457					721,367
Financial liabilities at fair value through profit or loss	80,532	80,532			68,438		12,095
Current tax liabilities	411	411					411
Deferred tax liabilities	365	365					365
Provisions	941	913					913
Other liabilities	11,989	11,989					11,989
Liabilities held for sale							
Debt securities in issue	151,231	151,231					151,231
Subordinated loans	18,100	18,100					18,100
Total liabilities	1,003,452	1,003,515			68,438		934,988

A summary table with the main sources of differences between the accounting and regulatory scope of consolidation is below. As the table shows, the main causes for the deviation are the amount from the off-balance sheet items (+ €325 billion), the differences resulting from the various offsetting rules (+ €172 billion) and the application of credit conversion factors (- €226 billion).

EU LI2 - Main sources of differences between regulatory exposure amounts and carrying values in financial statements					
2025	Total	Items subject to			
		Credit risk framework	Securitisation framework	CCR framework	Market risk framework
Assets carrying value amount under the scope of prudential consolidation (as per template LI1)	1,056,347	900,447	18,563	107,720	29,617
Liabilities carrying value amount under the scope of prudential consolidation (as per template LI1)	68,438			68,438	
Total net amount under the scope of prudential consolidation	987,909	900,447	18,563	39,282	29,617
Off-balance-sheet amounts	325,250	317,680	7,570		
Differences in valuations					
Differences due to different netting rules, other than those already included in row 2	167,876	167,876			
Differences due to consideration of provisions	3,600	3,665	-65		
Differences due to the use of credit risk mitigation techniques (CRMs)	-1,931	-1,266	-665		
Differences due to credit conversion factors (CCF)	-226,355	-226,355			
Differences due to Securitisation with risk transfer	-3,216		-3,216		
Other differences	759	-19,852	8,099	12,512	
Exposure amounts considered for regulatory purposes	1,224,276	1,142,195	30,286	51,795	

The CRR requires ING to disclose an outline of the differences in the scopes of consolidation (entity by entity) in a specific format that was provided in the EBA Implementation Technical Standards. The EBA template LI3 and text on LIB are disclosed in the [appendix](#).

Capital requirement

Economic and Regulatory Capital

Economic Capital (EC) and Regulatory Capital (RC) are the main sources of capital allocation within ING. Both of these capital metrics are used to determine the amount of capital that a transaction or business unit requires to support the economic and regulatory-based risks it faces. The concept of EC differs from RC in the sense that RC is the mandatory amount of capital defined under Pillar I. At the same time, EC is the best estimate of Pillar II capital that ING uses internally to manage its own risk. EC is a non-accounting measure that is inherently subject to dynamic changes and updated as a result of ING's portfolio mix and general market developments. ING continuously recalibrates the underlying assumptions behind its EC model, which may have an impact on the values of EC going forward.

EC is defined as the amount of capital that a transaction or business unit requires in order to support the economic risks it takes. EC focuses on the bank activities on an ING Bank consolidated level only and is therefore available within that scope. In general, EC is measured as the unexpected loss above the expected loss at a given confidence level. The EC calculation is used as part of the CRR II/CRD V Pillar II Internal Capital Adequacy Assessment Process (ICAAP) and is subject to the Supervisory Review and Evaluation Process (SREP) that is performed regularly by the supervisor.

The following fundamental principles and definitions have been established for the model:

- ING Bank uses a one-sided confidence level of 99.90% and a one-year time horizon to calculate EC;
- It is assumed that all currently known measurable sources of risk are included;
- The best estimate risk assumptions are as objective as possible and, to the extent possible, based on statistical analysis;
- The EC calculations reflect known embedded options and the influence of customer behaviour in banking products;
- The EC calculations are on a before tax basis and do not consider the effect of regulatory requirements on capital levels; and
- The framework does not include any franchise value of the business, discretionary management intervention or future business volumes and margins.

Specific measurement by risk type is described in greater detail in the separate risk type sections. The tables below provide the EC and RC by risk type and business line.

During 2025, the total Market Risk EC increased by €1.3 bln to €13.1 bln. The increase has mainly been driven by the strategic growth of the HQLA portfolio, Customer Behaviour Risk EC model refinements and parameter updates, and the integration of CVA EC following CRR3 implementation.

ING Group: Economic and Regulatory Capital by risk type

		Economic capital		Regulatory capital	
		2025	2024	2025	2024
1	Credit risk	16,313	15,931	22,454	22,570
2	Market risk	13,081	11,765	1,182	1,047
3	Business risk	1,322	1,306		
4	Operational risk	3,104	3,080	3,623	3,080
5	Total	33,820	32,083	27,259	26,697

ING Group: Economic and Regulatory Capital by business line combination

		Economic capital		Regulatory capital	
		2025	2024	2025	2024
1	Wholesale Banking	12,604	11,132	11,885	12,172
2	Retail Banking	18,565	16,559	13,952	13,214
3	Corporate Line	2,651	4,407	1,422	1,311
4	Total	33,820	32,083	27,259	26,697

Capital Adequacy

The rules for required Regulatory Capital or Capital adequacy are defined by European Union regulations and directives.

The rules express the regulators' and legislators' opinion on how much capital a bank and other regulated institutions must retain in relation to the size and the type of risks it is taking, expressed in the form of Risk-Weighted Assets. The most significant component of the capital base is the shareholders' equity. In addition to equity, the institution may issue certain liabilities such as Tier 1 and Tier 2 instruments which can be included in the capital base. The legal minimum requirement (excluding buffers) stipulates that the capital base must correspond to at least 8% of the Risk-Weighted Assets (RWA).

ING's Internal Capital Adequacy Assessment Process (ICAAP) constitutes a fundamental component of the bank's risk governance framework and is subject to oversight at the highest organisational levels. The Supervisory Board (SB), acting through its Risk Committee, establishes and monitors ING's risk appetite and strategy, ensuring alignment with ICAAP objectives. In parallel, the Audit Committee provides complementary oversight by reviewing the bank's capital position and related assessments.

The ICAAP process is designed to be comprehensive and forward-looking, incorporating rigorous evaluations of risk models and emerging risk factors, including geopolitical developments and climate-related considerations. This approach ensures that ING's capital adequacy remains resilient under evolving market conditions and regulatory requirements.

A distinctive feature of ICAAP is its integration with recovery planning. Severe stress scenarios identified within ICAAP are directly embedded into ING's Recovery Plan, which undergoes annual review by the Risk Committee. This linkage enhances the bank's preparedness for adverse circumstances and reinforces overall financial resilience.

ICAAP also serves as the basis for ING's strategic capital targets. The bank seeks to maintain a Common Equity Tier 1 (CET1) ratio of approximately 13%, comfortably above regulatory minimums. This target reflects ING's internal assessment of capital adequacy and its commitment to maintaining financial stability.

The process is subject to close supervisory scrutiny by the European Central Bank (ECB), ensuring adherence to regulatory standards and prudent capital management. Capital distribution decisions—predicated on ICAAP conclusions that ING holds capital in excess of internal requirements—require explicit ECB approval. This confirms that ICAAP outcomes and related capital plans are communicated to and validated by supervisory authorities before execution.

Furthermore, the Supervisory Review and Evaluation Process (SREP) constitutes the ECB's formal mechanism for assessing ICAAP. The Supervisory Board regularly reviews the results and follow-up actions arising from the annual SREP, reflecting ongoing engagement with supervisory bodies. These interactions underscore that ICAAP results are systematically examined and integrated into supervisory processes.

Through this structured approach, ING ensures transparency, regulatory compliance, and resilience, reaffirming its commitment to maintaining robust capital buffers under both normal and stressed conditions.

The table below presents an overview of the Minimum capital requirements and the RWA at year-end 2025 per risk type and method of calculation. The amount of RWA increased in 2025 following the implementation of the CRR3 regulation. The largest part of the RWA is related to Credit risk (excluding counterparty credit risk). More information on credit RWA is given in the chapter "Credit risk".

EU OV1: Regulatory capital requirements					
		RWA amounts		Minimum capital requirements	
		2025	2024	2025	2024
1	Credit risk (excluding CCR)	266,143	266,272	21,291	21,302
2	<i>Of which the standardised approach</i>	45,454	28,283	3,636	2,263
3	<i>Of which the Foundation IRB (F-IRB) approach</i>	87,977		7,038	
4	<i>Of which slotting approach</i>				
EU 4a	<i>Of which equities under the simple risk weighted approach</i>		1,402		112
5	<i>Of which the Advanced IRB (A-IRB) approach</i>	94,040	202,666	7,523	16,213
6	Counterparty credit risk - CCR	10,056	12,592	804	1,007
7	<i>Of which the standardised approach</i>	7,532	9,853	603	788
8	<i>Of which internal model method (IMM)</i>				
EU 8a	<i>Of which exposures to a CCP</i>	533	344	43	28
9	<i>Of which other CCR</i>	1,991	2,395	159	192
10	Credit valuation adjustments risk - CVA risk	2,720	1,034	218	83
EU 10a	<i>Of which the standardised approach (SA)</i>	2,184	1,034	175	83
EU 10b	<i>Of which the basic approach (F-BA and R-BA)</i>	535		43	
EU 10c	<i>Of which the simplified approach</i>				
11	Not applicable				
12	Not applicable				
13	Not applicable				
14	Not applicable				
15	Settlement risk		5		
16	Securitisation exposures in the non-trading book (after the cap)	4,479	2,563	358	205
17	<i>Of which SEC-IRBA approach</i>	1,231		98	
18	<i>Of which SEC-ERBA (including IAA)</i>	1,012	749	81	60
19	<i>Of which SEC-SA approach</i>				
EU 19a	<i>Of which 1250% / deduction</i>				
20	Position, foreign exchange and commodities risks (Market risk)	12,054	12,742	964	1,019
21	<i>Of which the Alternative standardised approach (A-SA)</i>				

EU 21a	Of which the Simplified standardised approach (S-SA)	5,060	4,405	405	352
22	Of which Alternative Internal Model Approach (A-IMA)				
EU 22a	Large exposures				
23	Reclassifications between the trading and non-trading books				
24	Operational risk	45,288	38,500	3,623	3,080
EU 24a	Exposures to crypto-assets				
25	Amounts below the thresholds for deduction (subject to 250% risk weight)	11,412	11,230	913	898
26	Output floor applied (%)	50%			
27	Floor adjustment (before application of transitional cap)				
28	Floor adjustment (after application of transitional cap)				
29	Total	340,739	333,708	27,259	26,697

Key Metrics

According to CRR/CRD IV capital adequacy rules, the Common Equity Tier 1 ratio must be at least 4.5%, the Tier 1 ratio at least 6% and the total capital ratio at least 8% of all risk-weighted assets. This was not changed in the CRR III/CRD VI.

ING Group's Common Equity Tier 1 ratio at year-end 2025 of 13.1% is well in excess of the 11.03% Common Equity Tier 1 MDA level for ING Group in 2025. This requirement is the sum of a 4.5% Pillar 1 requirement, a 0.93% Pillar 2 requirement and a 5.6% Combined Buffer Requirement, consisting of a 2.5% Capital Conservation Buffer, a 2.0% O-SII Buffer that is applied to systemically important Dutch banks by the Dutch Central Bank (DNB) as macro-prudential supervisor, 0.16% (sectoral) systemic risk buffer and 0.93% Countercyclical Buffer (CCyB).

Output floor

The EBA introduced two new templates, CMS1 and CMS2, to implement Article 438(d) and (da) of CRR3 and align with Basel Pillar 3 standards. They aim to provide transparency on the impact of the output floor by comparing standardised and modelled risk-weighted exposure amounts (RWEA).

Template EU CMS1 discloses RWEA calculated using the full standardised approach versus the actual RWEA and shows the RWEA used as the base for the output floor at risk level. It includes an additional column for the EU-specific calculation of the output floor, considering transitional provisions under Article 465 CRR3.

Template EU CMS2 focuses on credit risk and provides a comparison between RWEA computed under standardised and internal model approaches at exposure class and sub-class levels. It adds a column for the RWEA used in the EU output floor calculation, including transitional provisions.

EU CMS1 – Comparison of modelled and standardised risk weighted exposure amounts at risk level						
		Risk weighted exposure amounts (RWEAs)				
		RWEAs for modelled approaches that banks have supervisory approval to use	RWEAs for portfolios where standardised approaches are used	Total actual RWEAs (a + b)	RWEAs calculated using full standardised approach	RWEAs calculated using full SA after application of transitional provisions on output floor S-TREA (Article 465 (3) (4) (5) (5b) of Regulation (EU) No 575/2013)
2025						
1	Credit risk (excluding counterparty credit risk)	216,209	45,454	261,664	431,174	383,471

Countercyclical buffer

ING's countercyclical buffer requirement rose from 0.832% at the end of 2024 to 0.935% at the end of 2025. See below for an overview of the exposure distribution for the most relevant countries (having an own funds

requirements weight larger than 1% and/or having in place or announced a countercyclical buffer rate larger than 0%).

Countercyclical buffer

Own funds

The CRR requires ING to disclose information on own funds in a specific format that was provided in the EBA Implementation Technical Standards. The EBA templates Annex I, II and Annex VI are disclosed in the [appendix](#).

EU CC1 - Composition of regulatory own funds				
		2025	2024	Source based on reference numbers/letters of the balance sheet under the regulatory scope of consolidation
Common Equity Tier 1 (CET1) capital: instruments and reserves				
1	Capital instruments and the related share premium accounts	17,147	17,148	CC2 - 26
	of which: Ordinary Shares	17,147	17,148	
2	Retained earnings	31,059	29,953	CC2 - 28
3	Accumulated other comprehensive income (and other reserves)	-689	-47	
EU-3a	Funds for general banking risk			
4	Amount of qualifying items referred to in Article 484 (3) CRR and the related share premium accounts subject to phase out from CET1			
5	Minority interests (amount allowed in consolidated CET1)	575	485	
EU-5a	Independently reviewed interim profits net of any foreseeable charge or dividend	3,164	3,118	
6	Common Equity Tier 1 (CET1) capital before regulatory adjustments	51,256	50,657	
Common Equity Tier 1 (CET1) capital: regulatory adjustments				
7	Additional value adjustments (negative amount)	-731	-691	
8	Intangible assets (net of related tax liability) (negative amount)	-1,166	-1,078	CC2 - 9
9	Not applicable			
10	Deferred tax assets that rely on future profitability excluding those arising from temporary differences (net of related tax liability where the conditions in Article 38 (3) CRR are met) (negative amount)	-52	-83	CC2 - 11

11	Fair value reserves related to gains or losses on cash flow hedges of financial instruments that are not valued at fair value	1,268	1,693	
12	Negative amounts resulting from the calculation of expected loss amounts	-1,132	-1,234	
13	Any increase in equity that results from securitised assets (negative amount)			
14	Gains or losses on liabilities valued at fair value resulting from changes in own credit standing	49	15	
15	Defined-benefit pension fund assets (negative amount)	-413	-437	
16	Direct, indirect and synthetic holdings by an institution of own CET1 instruments (negative amount)	-3,108	-2,010	
17	Direct, indirect and synthetic holdings of the CET 1 instruments of financial sector entities where those entities have reciprocal cross holdings with the institution designed to inflate artificially the own funds of the institution (negative amount)			
18	Direct, indirect and synthetic holdings by the institution of the CET1 instruments of financial sector entities where the institution does not have a significant investment in those entities (amount above 10% threshold and net of eligible short positions) (negative amount)			
19	Direct, indirect and synthetic holdings by the institution of the CET1 instruments of financial sector entities where the institution has a significant investment in those entities (amount above 10% threshold and net of eligible short positions) (negative amount)			
20	Not applicable			
EU-20a	Exposure amount of the following items which qualify for a RW of 1250%, where the institution opts for the deduction alternative			
EU-20b	of which: qualifying holdings outside the financial sector (negative amount)			
EU-20c	of which: securitisation positions (negative amount)			
EU-20d	of which: free deliveries (negative amount)			
21	Deferred tax assets arising from temporary differences (amount above 10% threshold, net of related tax liability where the conditions in Article 38 (3) CRR are met) (negative amount)			
22	Amount exceeding the 17,65% threshold (negative amount)			

23	of which: direct, indirect and synthetic holdings by the institution of the CET1 instruments of financial sector entities where the institution has a significant investment in those entities			
24	Not applicable			
25	of which: deferred tax assets arising from temporary differences			
EU-25a	Losses for the current financial year (negative amount)			
EU-25b	Foreseeable tax charges relating to CET1 items except where the institution suitably adjusts the amount of CET1 items insofar as such tax charges reduce the amount up to which those items may be used to cover risks or losses (negative amount)			
26	Not applicable			
27	Qualifying AT1 deductions that exceed the AT1 items of the institution (negative amount)			
27a	Other regulatory adjustments	-1,404	-1,572	
28	Total regulatory adjustments to Common Equity Tier 1 (CET1)	-6,689	-5,397	
29	Common Equity Tier 1 (CET1) capital	44,567	45,260	
Additional Tier 1 (AT1) capital: instruments				
30	Capital instruments and the related share premium accounts	7,464	7,970	CC2 - 24
31	of which: classified as equity under applicable accounting standards			
32	of which: classified as liabilities under applicable accounting standards	7,464	7,970	
33	Amount of qualifying items referred to in Article 484 (4) CRR and the related share premium accounts subject to phase out from AT1			
EU-33a	Amount of qualifying items referred to in Article 494a(1) CRR subject to phase out from AT1			
EU-33b	Amount of qualifying items referred to in Article 494b(1) CRR subject to phase out from AT1			
34	Qualifying Tier 1 capital included in consolidated AT1 capital (including minority interests not included in row 5) issued by subsidiaries and held by third parties	112	85	
35	of which: instruments issued by subsidiaries subject to phase out			
36	Additional Tier 1 (AT1) capital before regulatory adjustments	7,576	8,055	
Additional Tier 1 (AT1) capital: regulatory adjustments				

37	Direct, indirect and synthetic holdings by an institution of own AT1 instruments (negative amount)	-5	-5	
38	Direct, indirect and synthetic holdings of the AT1 instruments of financial sector entities where those entities have reciprocal cross holdings with the institution designed to inflate artificially the own funds of the institution (negative amount)			
39	Direct, indirect and synthetic holdings of the AT1 instruments of financial sector entities where the institution does not have a significant investment in those entities (amount above 10% threshold and net of eligible short positions) (negative amount)			
40	Direct, indirect and synthetic holdings by the institution of the AT1 instruments of financial sector entities where the institution has a significant investment in those entities (net of eligible short positions) (negative amount)			
41	Not applicable			
42	Qualifying T2 deductions that exceed the T2 items of the institution (negative amount)			
42a	Other regulatory adjustments to AT1 capital		-19	
43	Total regulatory adjustments to Additional Tier 1 (AT1) capital	-5	-24	
44	Additional Tier 1 (AT1) capital	7,571	8,032	
45	Tier 1 capital (T1 = CET1 + AT1)	52,138	53,291	
Tier 2 (T2) capital: instruments				
46	Capital instruments and the related share premium accounts	10,643	9,887	CC2 - 24
47	Amount of qualifying items referred to in Article 484(5) CRR and the related share premium accounts subject to phase out from T2 as described in Article 486(4) CRR			
EU-47a	Amount of qualifying items referred to in Article 494a(2) CRR subject to phase out from T2			
EU-47b	Amount of qualifying items referred to in Article 494b(2) CRR subject to phase out from T2			
48	Qualifying own funds instruments included in consolidated T2 capital (including minority interests and AT1 instruments not included in rows 5 or 34) issued by subsidiaries and held by third parties	98	68	
49	of which: instruments issued by subsidiaries subject to phase out			
50	Credit risk adjustments			
51	Tier 2 (T2) capital before regulatory adjustments	10,742	9,956	

Tier 2 (T2) capital: regulatory adjustments				
52	Direct, indirect and synthetic holdings by an institution of own T2 instruments and subordinated loans (negative amount)	-35	-35	
53	Direct, indirect and synthetic holdings of the T2 instruments and subordinated loans of financial sector entities where those entities have reciprocal cross holdings with the institution designed to inflate artificially the own funds of the institution (negative amount)			
54	Direct, indirect and synthetic holdings of the T2 instruments and subordinated loans of financial sector entities where the institution does not have a significant investment in those entities (amount above 10% threshold and net of eligible short positions) (negative amount)			
54a	Not applicable			
55	Direct, indirect and synthetic holdings by the institution of the T2 instruments and subordinated loans of financial sector entities where the institution has a significant investment in those entities (net of eligible short positions) (negative amount)			
56	Not applicable			
EU-56a	Qualifying eligible liabilities deductions that exceed the eligible liabilities items of the institution (negative amount)			
EU-56b	Other regulatory adjustments to T2 capital		-19	
57	Total regulatory adjustments to Tier 2 (T2) capital	-35	-54	
58	Tier 2 (T2) capital	10,707	9,902	
59	Total capital (TC = T1 + T2)	62,845	63,194	
60	Total Risk exposure amount	340,739	333,708	
Capital ratios and requirements including buffers				
61	Common Equity Tier 1 capital	13.08 %	13.56 %	
62	Tier 1 capital	15.30 %	15.97 %	
63	Total capital	18.44 %	18.94 %	
64	Institution CET1 overall capital requirements	11.04 %	10.76 %	
65	of which: capital conservation buffer requirement	2.50 %	2.50 %	
66	of which: countercyclical capital buffer requirement	0.93 %	0.83 %	
67	of which: systemic risk buffer requirement	0.16		

EU-67a	of which: Global Systemically Important Institution (G-SII) or Other Systemically Important Institution (O-SII) buffer requirement	2.00 %	2.00 %	
EU-67b	of which: additional own funds requirements to address the risks other than the risk of excessive leverage	0.93 %	0.93 %	
68	Common Equity Tier 1 capital (as a percentage of risk exposure amount) available after meeting the minimum capital requirements	7.65 %	8.13 %	
National minima (if different from Basel III)				
69	Not applicable			
70	Not applicable			
71	Not applicable			
Amounts below the thresholds for deduction (before risk weighting)				
72	Direct and indirect holdings of own funds and eligible liabilities of financial sector entities where the institution does not have a significant investment in those entities (amount below 10% threshold and net of eligible short positions)	3,950	1,842	
73	Direct and indirect holdings by the institution of the CET1 instruments of financial sector entities where the institution has a significant investment in those entities (amount below 17.65% thresholds and net of eligible short positions)	3,924	3,827	
74	Not applicable			
75	Deferred tax assets arising from temporary differences (amount below 17,65% threshold, net of related tax liability where the conditions in Article 38 (3) CRR are met)	640	665	
Applicable caps on the inclusion of provisions in Tier 2				
76	Credit risk adjustments included in T2 in respect of exposures subject to standardised approach (prior to the application of the cap)			
77	Cap on inclusion of credit risk adjustments in T2 under standardised approach	572	355	
78	Credit risk adjustments included in T2 in respect of exposures subject to internal ratings-based approach (prior to the application of the cap)			
79	Cap for inclusion of credit risk adjustments in T2 under internal ratings-based approach	1,353	1,474	
Capital instruments subject to phase-out arrangements (only applicable between 1 Jan 2014 and 1 Jan 2022)				
80	Current cap on CET1 instruments subject to phase out arrangements			
81	Amount excluded from CET1 due to cap (excess over cap after redemptions and maturities)			

82	Current cap on AT1 instruments subject to phase out arrangements			
83	Amount excluded from AT1 due to cap (excess over cap after redemptions and maturities)			
84	Current cap on T2 instruments subject to phase out arrangements			
85	Amount excluded from T2 due to cap (excess over cap after redemptions and maturities)			

EU CC2 - reconciliation of regulatory own funds to balance sheet in the audited financial statements

		Balance sheet as in published financial statements	Under regulatory scope of consolidation	Reference
		2025	2025	
Assets - Breakdown by asset classes according to the balance sheet in the published financial statements				
1	Cash and balances with central banks	52,889	52,889

29	Shareholders' equity (parent)	49,698	49,698	
30	Non-controlling interests	1,255	1,255	
31	Total shareholders' equity	50,953	50,953	

Leverage ratio

The leverage ratio is a CRR/CRD IV measure indicating the level of the Tier 1 Capital compared to the total exposure. It aims to assess the risk of excessive leverage of the institution. In line with the regulatory requirements, ING Group will use the specific EBA templates as the basis for the presentation of its Leverage ratio. These EBA templates reflect the Leverage Ratio as calculated under the requirements of the CRR/CRD. The Final Draft Implementing Technical Standards (ITS) on disclosure of the leverage ratio have been approved by the European Commission and published in the EU Official Journal in early 2016. The official reporting of the Delegated Act Leverage ratio to the ECB has commenced as of September 2016.

As of January 2023, the G-SII buffer requirement (0.5%) has come into effect, increasing the overall Leverage Ratio requirement to 3.5% in accordance with Article 92(1a) of the CRR. Leverage ratio decreased in 2025 to 4.5% (from 4.7%), primarily due to an increase of the balance sheet.

EU LR1 - LRSum: Summary reconciliation of accounting assets and leverage ratio exposures			
		2025	2024
		Applicable amounts	Applicable amounts
1	Total assets as per published financial statements	1,054,405	1,020,545
2	Adjustment for entities which are consolidated for accounting purposes but are outside the scope of prudential consolidation		
3	(Adjustment for securitised exposures that meet the operational requirements for the recognition of risk transference)		
4	(Adjustment for temporary exemption of exposures to central banks (if applicable))		
5	(Adjustment for fiduciary assets recognised on the balance sheet pursuant to the applicable accounting framework but excluded from the total exposure measure in accordance with point (i) of Article 429a(1) CRR)		
6	Adjustment for regular-way purchases and sales of financial assets subject to trade date accounting		-895
7	Adjustment for eligible cash pooling transactions		
8	Adjustment for derivative financial instruments	22,879	12,927
9	Adjustment for securities financing transactions (SFTs)	5,520	5,900
10	Adjustment for off-balance sheet items (ie conversion to credit equivalent amounts of off-balance sheet exposures)	89,197	105,076
11	(Adjustment for prudent valuation adjustments and specific and general provisions which have reduced Tier 1 capital)		
EU-11a	(Adjustment for exposures excluded from the total exposure measure in accordance with point (c) of Article 429a(1) CRR)		
EU-11b	(Adjustment for exposures excluded from the total exposure measure in accordance with point (j) of Article 429a(1) CRR)		
12	Other adjustments	-16,511	-13,864
13	Total exposure measure	1,155,490	1,129,689

EU LR2 - LRCom: Leverage ratio common disclosure			
		2025	2024
		CRR/CRD IV	CRR/CRD IV
		Applicable amounts	Applicable amounts
On-balance sheet exposures (excluding derivatives and SFTs)			
1	On-balance sheet items (excluding derivatives, SFTs, but including collateral)	950,368	908,338
2	Gross-up for derivatives collateral provided, where deducted from the balance sheet assets pursuant to the applicable accounting framework		
3	(Deductions of receivables assets for cash variation margin provided in derivatives transactions)	-3,955	-7,465
4	(Adjustment for securities received under securities financing transactions that are recognised as an asset)		
5	(General credit risk adjustments to on-balance sheet items)		
6	(Asset amounts deducted in determining Tier 1 capital)	-4,867	-5,058
7	Total on-balance sheet exposures (excluding derivatives and SFTs)	941,546	895,815
Derivative exposures			
8	Replacement cost associated with SA-CCR derivatives transactions (ie net of eligible cash variation margin)	17,438	16,491
EU-8a	Derogation for derivatives: replacement costs contribution under the simplified standardised approach		
9	Add-on amounts for potential future exposure associated with SA-CCR derivatives transactions	28,731	26,172
EU-9a	Derogation for derivatives: Potential future exposure contribution under the simplified standardised approach		
EU-9b	Exposure determined under Original Exposure Method		
10	(Exempted CCP leg of client-cleared trade exposures) (SA-CCR)	-1	-24
EU-10a	(Exempted CCP leg of client-cleared trade exposures) (simplified standardised approach)		
EU-10b	(Exempted CCP leg of client-cleared trade exposures) (Original Exposure Method)		
11	Adjusted effective notional amount of written credit derivatives	10,284	16,320
12	(Adjusted effective notional offsets and add-on deductions for written credit derivatives)	-7,570	-13,763
13	Total derivatives exposures	48,882	45,195
Securities financing transaction (SFT) exposures			
14	Gross SFT assets (with no recognition of netting), after adjustment for sales accounting transactions	128,685	130,287
15	(Netted amounts of cash payables and cash receivables of gross SFT assets)	-48,623	-50,612

16	Counterparty credit risk exposure for SFT assets	5,520	5,900
EU-16a	Derogation for SFTs: Counterparty credit risk exposure in accordance with Articles 429e(5) and 222 CRR		
17	Agent transaction exposures		
EU-17a	(Exempted CCP leg of client-cleared SFT exposure)		
18	Total securities financing transaction exposures	85,582	85,575
Other off-balance sheet exposures			
19	Off-balance sheet exposures at gross notional amount	301,412	290,096
20	(Adjustments for conversion to credit equivalent amounts)	-212,215	-185,020
21	(General provisions deducted in determining Tier 1 capital and specific provisions associated with off-balance sheet exposures)		
22	Off-balance sheet exposures	89,197	105,076
Excluded exposures			
EU-22a	(Exposures excluded from the total exposure measure in accordance with point (c) of Article 429a(1) CRR)		
EU-22b	(Exposures exempted in accordance with point (j) of Article 429a(1) CRR (on and off balance sheet))		
EU-22c	(Excluded exposures of public development banks (or units) - Public sector investments)		
EU-22d	(Excluded exposures of public development banks (or units) - Promotional loans)		
EU-22e	(Excluded passing-through promotional loan exposures by non-public development banks (or units))		
EU-22f	(Excluded guaranteed parts of exposures arising from export credits)	-9,716	-1,972
EU-22g	(Excluded excess collateral deposited at triparty agents)		
EU-22h	(Excluded CSD related services of CSD/institutions in accordance with point (o) of Article 429a(1) CRR)		
EU-22i	(Excluded CSD related services of designated institutions in accordance with point (p) of Article 429a(1) CRR)		
EU-22j	(Reduction of the exposure value of pre-financing or intermediate loans)		
EU-22k	(Excluded exposures to shareholders according to Article 429a (1), point (da) CRR)		
EU-22l	(Exposures deducted in accordance with point (q) of Article 429a(1) CRR)		
EU-22m	(Total exempted exposures)	-9,716	-1,972
Capital and total exposure measure			
23	Tier 1 capital	52,138	53,291
Total exposure measure		1,155,490	1,129,689
Leverage ratio			

25	Leverage ratio (%)	4.51 %	4.72 %
EU-25	Leverage ratio (excluding the impact of the exemption of public sector investments and promotional loans) (%)	4.51 %	4.72 %
25a	Leverage ratio (excluding the impact of any applicable temporary exemption of central bank reserves) (%)	4.51 %	4.72 %
26	Regulatory minimum leverage ratio requirement (%)	3.00 %	3.00 %
EU-26a	Additional own funds requirements to address the risk of excessive leverage (%)

EU-10	Corporates	201,601	195,623
EU-11	Exposures in default	7,886	9,781
EU-12	Other exposures (eg equity, securitisations, and other non-credit obligation assets)	21,641	24,181

TLAC and MREL

TLAC requirements apply to ING Group at the consolidated level of the resolution group and are currently set at the higher of (a) 18% of RWA or (b) 6.75% TLAC leverage. In December 2020, CRD V was incorporated in Dutch law. This law specifies that CET1 capital used to meet the Combined Buffer Requirement (CBR) cannot be used to meet the RWA-based TLAC requirement, implying that the total RWA-based requirement (a) is 23.60% of RWA (18% plus the combined buffer requirement of 5.60%). This amounts to a €80.4 billion requirement. The second TLAC requirement (b), 6.75% of the Leverage ratio exposure, amounts to €80.0 billion. ING Group's TLAC capacity was €108.5 billion as of the end of 2025, € 28.1 billion in excess of the highest of (a) and (b). This compares to a TLAC Capacity per end 2024 of €111.2 billion, €36.2 billion in excess of the €75.0 billion TLAC requirement.

ING Group meets the MREL requirements with an MREL ratio as per 31 December 2025 of 31.8% of RWA and 9.4% of leverage ratio exposure compared to the more restrictive requirement of 28.2% of RWA or 7.24% of Leverage ratio exposure requirement applicable as per the reporting date as determined by the resolution authority.

The template "EU CCA: Main features of regulatory own funds instruments and eligible instruments" is disclosed in the [appendix](#).

EU KM2: key metrics - MREL and, where applicable, G-SII Requirement for own funds and eligible liabilities							
at the level of each resolution group		Minimum requirement for own funds and eligible liabilities (MREL)	G-SII Requirement for own funds and eligible liabilities (TLAC)				
			2025	31/12/2025	30/09/2025	30/06/2025	31/03/2025
Own funds and eligible liabilities, ratios and components							
1	Own funds and eligible liabilities	108,507	108,507	108,318	105,726	110,330	111,247

Credit Risk

Basis and scope of presentation

In the credit risk section of Pillar III, data included in the tables are related to ING's credit risk resulting from Lending (both on- and off-balance), Money Market activities, Investment Risks, Securities Financing and Derivatives. The Securities Financing and Derivatives portfolios are presented separately in the counterparty credit risk section. The amounts presented in this section relate to amounts used for credit risk management purposes, which follow ING's internal interpretation of the definitions as prescribed under CRR/CRD IV. Therefore, the numbers can be different from the accounting numbers as reported in the annual accounts under IFRS-EU. An example is the treatment of ONCOA (Other Non-Credit Obligation Assets) items – while the accounting numbers include ONCOA, they are excluded from the credit risk section of Pillar III.

The majority of the tables included in this section are based on gross or net carrying value. The gross carrying value refers to the original exposure pre-credit conversion factors for the on- and off-balance sheet items. The net carrying value corresponds to the original exposure (on- and off-balance) pre-credit conversion factors corrected for allowances, impairments and provisions.

READ is the Regulatory Exposure at Default (READ) and credit risk weighted assets (RWA) under the CRR/CRD IV definitions. READ is the sum of the on-balance and off-balance sheet: Lending, Investment, Money Market and counterparty activities plus an estimated portion of the unused credit facilities extended to the obligor. The amounts associated with Investment and Lending activities are based on the original amount invested less repayments.

The Securities Financing figures are based on the Financial Collateral Comprehensive Method applying supervisory volatility adjustments. The Derivatives figures are based on the Standardised Approach for Counterparty Credit Risk (SA-CCR). Under SA-CCR the exposure at default (EAD) estimate is based on two components: the current replacement cost (RC) and the potential future exposure (PFE). The RC reflects today's loss amount upon the default of a counterparty. The PFE reflects the future expected increase in loss amount. Both replacement cost and PFE are adjusted based on the underlying collateral and any legal netting or compensation that may be permitted under master agreement arrangements, such as International Swaps and Derivatives Association (ISDA) master agreements and Credit Support Annexes (CSAs).

Off-balance sheet exposures include letters of credit and guarantees, which are associated with the Lending risk category and are included under 'credit risk outstanding'. Additionally, off-balance sheet exposures include a portion of the unused limits, which represent the expected value of the outstanding at the theoretical moment of default. These are not counted under 'credit risk outstanding', but they contribute to total exposure and READ.

Investments in a financial sector entity, determined following art. 43 of the CRR are included in the item "amounts below the thresholds for deduction" of table EU-OV1 "ING Regulatory capital requirements" up to the level at which the combined significant investments are equal to 10% of the CET1 capital of ING. These exposures are subject to 250% risk weight.

A small part of the equity exposure of ING's portfolio is subject to the simple risk-weight method for calculating the regulatory capital.

Credit risk management objectives and policies

ING's universal banking business model, which combines Retail and Wholesale Banking, directly shapes its credit risk profile. Retail Banking contributes a diversified portfolio of exposures to private individuals through products such as mortgages and consumer loans, as well as lending to businesses across multiple geographies. Wholesale Banking, on the other hand, is characterized by lending and derivative exposures to corporate and financial institution clients, often concentrated in specific sectors and involving cross-border transactions. The strategic focus on growing customer value and deepening client relationships inherently drives the evolution of this credit risk profile, reflecting the balance between retail diversification and wholesale sectoral concentration.

To manage credit risk, ING relies on global policies, procedures, and processes across the full lifecycle: the Credit Risk Management Policy defines obligations for origination, approval, monitoring, and reporting of credit risk; the Credit Concentration Risk Policy governs concentrations covering single name as well as secondary/indirect and country concentrations—with defined metrics, limits, and escalation paths; the Credit Risk Appetite Policy sets quantitative Credit Risk Appetite limits by sector and product aligned to the Global Risk Appetite and overall credit strategy; the Lending Guidance Procedure translates that appetite into granular credit granting criteria (and, where relevant, sub portfolio limits) that support and are monitored against the Risk Appetite; and the Credit Assessment & Monitoring Procedure (CAMP) mandates proportional creditworthiness assessment and ongoing monitoring at individual transaction level. Together these frameworks manage credit risk at both portfolio and exposure level and operate as a closed loop so underwriting standards and limits remain continuously aligned with ING's strategic objectives and set risk appetite.

The credit risk management and control function is a central part of ING's overall risk management structure, which is based on the 'three lines of defence' model. The function is led by the Chief Risk Officer (CRO), a member of the Executive Board, who is responsible for ING's risk framework, risk appetite, and policies. This function is inde-

pendent of the business units (first line) and is responsible for the group-wide credit risk framework, including model development, validation, and monitoring.

ING applies the ‘three lines of defence’ model to define clear roles and responsibilities for credit risk management. The first line, represented by the business units, is responsible for day-to-day credit risk taking and management within established limits. The second line, comprising the risk control and compliance functions, operates independently from the business. The credit risk management function under the Chief Risk Officer (CRO) designs the risk framework, monitors adherence, and provides independent challenge, while compliance ensures conformity with laws and regulations. The third line, Internal Audit, delivers independent and objective assurance to the Supervisory Board on the effectiveness of governance, risk management, and internal controls, including those related to credit risk. Oversight of the interaction between these lines is provided by the Risk Committee, ensuring robust governance and accountability across all layers of the organisation.

Credit risk approach

ING applies the Internal Ratings Based (IRB) approach to the majority of its significant portfolios that contain credit risk in accordance with the required approvals granted by the ECB and various local regulators. The IRB approach is permitted by the regulator if there are regulatory approved rating models (PD, EAD and LGD) in place and if the (local) management understands and uses these rating models in their credit decision-making processes. However, a small portion of the portfolio remains subject to the Standardised Approach (SA).

Credit risk capital

Regulatory capital is the minimum amount of capital (based on 99.90% confidence level) that ING holds from a regulatory perspective as a cushion to be able to survive large unexpected losses.

RWA comparison

The differences in RWA among banks have been classified by the BIS in 3 categories:

- Risk based drivers that stem from the differences in underlying risk at the exposure/portfolio level and in business models/ strategies including asset class mix;
- Practice-based drivers including approaches to risk management and risk measurement; and
- Regulatory environment such as supervisory practices, implementing laws and regulations including national discretion and accounting standards.

Risk based drivers

ING’s portfolio is dominated by secured lending especially in the areas of residential mortgages, leasing and commercial real estate. Secured lending tends to have a much lower LGD, given the collateral involved, which is a key driver of RWA calculations. Therefore the regulatory formula for residential mortgages tends to result in lower RWA, all other factors being equal.

Practice based drivers

ING has a proactive approach to non-performing exposures. Non-performing exposures are recognised early based on unlikely to pay triggers. For non-retail, ING typically classifies default based on a borrower rating and not a facility rating which means that a customer will only have one PD (probability of default) regardless of the type(s) of transactions done with ING. As a consequence, if one facility is in default, usually all facilities of the client are in default. Non-performing clients which were granted forbearance measures have an additional probation period of 1 year starting from the last moment they are classified as forborne, before returning to performing status.

Regulatory environment

ING’s primary supervising entity is the ECB, which is supported by many host supervisors. The ECB supervises adherence to regulatory rules: the regulatory framework defined in CRR/CRD, implementing- and regulatory technical standards, European Banking Authority (EBA) guidelines and ECB guidance. Regulations require all ‘significant changes’ in internal models (PD, LGD and EAD) and policies to be reviewed and approved by the ECB, before implementation. Lower level model changes are either pre-notified or post-notified to the ECB.

Comparing capital levels across banks is a challenging exercise because of different risk profiles, differences in risk based drivers, practice based drivers and the regulatory environment (e.g. internal rating based approach or the standardised approach). These factors have a substantial impact on the regulatory capital/RWA of a financial institution. ING continues to work with industry groups and strives to adhere to the latest BIS and EBA recommendations to improve the transparent reporting of the bank’s capital calculations.

Economic capital

Economic capital reflects ING’s own view on credit risk, which allows it to be used in decision-making processes at (sub) portfolio level. Credit risk and transfer risk capital are calculated for all portfolios which contain credit or transfer risk, including investment portfolios. Economic capital is the minimum amount of capital required to cover unexpected losses within a 99.9% confidence level and a 12-month time horizon. It is used throughout ING in the decision-making process (mainly wholesale banking), in risk adjusted counterparty and portfolio profitability measurement tools (wholesale and retail banking), in investment and divestment decisions, in the country risk framework and in concentration risk management, including risk appetite statements (RAS). Economic capital is calculated using the economic values of rating models (PD, EAD and LGD), in line with regulatory requirements.

An important characteristic of our IT systems and framework is that models are built for several purposes, including economic capital, regulatory capital and loan loss provisioning. These credit risk models are used throughout the organisation which is compliant with the Basel Use Test requirement and facilitates active feedback on the risk parameters by business units.

Credit risk measurement

There are two ways to measure credit risk for regulatory reporting purposes within ING's portfolio, depending on whether the exposure is booked under an ING office that is permitted by the ECB to use the internal rating based (IRB) approach, or if it falls under SA..

Standardised approach

The SA applies a fixed risk weight to each asset as dictated by the CRR, and is based on the exposure class to which the exposure is assigned. As such, the SA is the least sophisticated of the regulatory capital methodologies and is not as sensitive as the risk-based approach. Where external rating agency ratings are available, they may be used as a substitute for using the fixed risk weightings assigned by the Financial Supervisory Authorities. Because the underlying obligors are relatively small for exposures treated under SA, with an exception of Governments and central banks, the underlying obligors tend not to have external ratings.

Internal rating based approach

There are five main elements that drive the determination of risk-weighted assets under the IRB approach.

- **Probability of Default (PD):** The first is the borrower's probability of default, which measures a client's creditworthiness in terms of the likelihood of going into default. It attempts to measure the senior, unsecured standalone creditworthiness of an organisation without consideration of structural elements of the underlying transactions, such as collateral, pricing, or maturity. Each borrower has a rating which translates into a specific PD.
- **Exposure at Default (EAD):** The second element is the borrower's exposure at default. EAD models are intended to estimate the outstandings amount or obligation at the moment of default. Since the time at which a client may go into default is unknown, and the level of outstandings that may occur on that date is also unknown, ING uses a combination of statistical and hybrid models to estimate the EAD. Except guarantees and letters of credit, the EAD is always equal to or higher than the associated credit risk outstandings, under the assumption that clients tend to absorb liquidity from available credit resources before financial problems become apparent to the clients' creditors. EAD is largely a function of the type of credit facility (overdraft, revolving, term) offered to the borrower.
- **Loss Given Default (LGD):** The third element is loss given default. LGD models are intended to estimate the amount ING would lose after liquidating collateral pledged in association with a given loan or financial obligation, or alternatively, from liquidating the company as a whole as part of a workout process. LGD models are based on cover types, estimated recovery rates given orderly liquidation, and (in)direct cost of liquidation.
- **Maturity (M):** The fourth element is the time to the maturity of the underlying financial obligation. Regulatory requirements floor the maturity element at one year and cap it at five years.
- **Exposure Class:** The fifth element is the exposure class (a regulatory prescribed grouping of a common obligor type or product type) which is a driver for the correlation factor. To calculate risk-weighted assets the default correlation between a transaction and all other transactions in the portfolio is taken into account.

The expected loss (EL) provides a measure of the value of the credit losses that ING may reasonably expect to incur on its portfolio. In its basic form, the expected loss can be represented as:

$$EL = PD * EAD * LGD$$

Credit risk tools

Models used for exposure classes

ING has developed PD, EAD and LGD models for Wholesale Banking and Retail Banking portfolios. These models are subject to Global Financial Risk Committee (GFRC) approval and changes which significantly impact the results require approval from the regulator before implementation. By nature, the above described exposure classes have different, specific characteristics. To capture these specific characteristics and to have suitable valuations and analyses in place, Model Development is continuously updating and developing models within each exposure class.

ING master scale

Internal rating grade and corresponding PD and external rating equivalent		
Internal rating grade	PD range for each grade	External Rating Equivalent
Performing		
Investment grade	1 0.00 - 0.01%	AAA
	2 0.01 - 0.03%	AA+
	3 0.03 - 0.04%	AA
	4 0.04 - 0.05%	AA-
	5 0.05 - 0.06%	A+
	6 0.06 - 0.08%	A
	7 0.08 - 0.11%	A-
	8 0.11 - 0.17%	BBB+
	9 0.17 - 0.26%	BBB
	10 0.26 - 0.37%	BBB-
Non-investment grade	11 0.37 - 0.58%	BB+
	12 0.58 - 1.00%	BB
	13 1.00 - 1.77%	BB-
	14 1.77 - 3.23%	B+
	15 3.23 - 6.05%	B
	16 6.05 - 11.67%	B-
	17 11.67 - 20.20%	CCC
Sub-standard grade	18 20.20 - 29.58%	CC
	19 >29.58%-100%	C
Non-performing		
Non-performing grade	20	1 Default
	21	1 Default
	22	1 Default

IRB models per exposure class

In the table below, the number of significant PD, EAD and LGD models per asset class are shown. Additionally a description of the model and methodology are provided per exposure class. The asset classes presented in this table do not align with the EBA Exposure classes as the scope has been redefined to better fit the scope of the model. SME exposure, for example, can be part of either corporate exposures or other retail depending on the size of the SME.

IRB models and methodology

	Model Type	Model description and methodology
Financial institutions	PD	The PD model follows a shadow rating approach based on long-term issuer ratings by rating agencies
Corporates - Specialized lending	PD	Expert based scorecards Models predict a rating for Commercial Property Finance, Project Finance, Trade and Commodity Finance.
	LGD	Hybrid LGD Models predict loss given default for Commercial Property Finance.
	EAD	There is a dedicated EAD model for commercial property finance due to the specificities of this portfolio.
Large Corporates	PD	The Corporate Large model is a global hybrid model build on 12 years of data, including balance sheet and qualitative information as well as country risk and parent influence.
SME	PD	The SME PD models are estimated statistically and directly predict a PD. Most of these models are developed locally to reflect regional/jurisdiction circumstances.
	LGD	Local statistical models or hybrid models use various data inputs on cure behaviour as well as cost and recovery.
	EAD	Local statistical models that use various data inputs, including product type and geography.
Secured by residential mortgages	PD	The PD mortgages models are all developed statistically and include borrower specific information, payment behaviour and product related information. These are statistical models that directly predict a PD.
	LGD	Local statistical models or hybrid models use various data inputs on cure behaviour as well as cost and recovery
	EAD	Local statistical models that use various data inputs, including product type and geography.
Private Individuals	PD	The PD models for private individuals are all developed statistically and include borrower specific information, payment behaviour and product related information. These are statistical models that directly predict a PD.
	LGD	Local statistical models use various data inputs on cure behaviour as well as cost and recovery.
	EAD	Local statistical models that use various data inputs, including product type and geography.

Credit quality

The following section focusses on non-performing loans, which are loans where there is a reasonable probability that ING may encounter a loss, unless ING intervenes with specific and significant actions. In other words, in this category an account or portfolio requires a more intensified approach, which may include renegotiation of terms and conditions and/or business/financial restructuring.

The credit quality of risk exposures is presented in several tables, that were introduced in 2021 due to changes in Pillar 3 regulations. The tables provide insight in the credit quality per exposure class, industry or counterparty type and geography. These tables present the gross carrying values, consisting of on- and off-balance sheet exposures, split over non-performing / performing, specific risk adjustments and impairments/allowances. The net carrying values are the result of specific risk adjustments and / or after impairments/allowances and are presented at the end of the tables. This section provides a comprehensive picture of the credit quality of the banks' assets per exposure class. The data excludes Counterparty Credit Risk exposures, Securitisations, CVA RWA, Equities and ON-COA. The net carrying values correspond to the original exposure (on and off-balance) pre-credit conversion factors corrected for allowances, impairments and provisions.

On-balance sheet items include loans and debt securities. Off-balance sheet items include guarantees given and irrevocable loan commitments. Pre-settlement exposures are not included in this section.

Definition of default

ING defines an exposure as in default (credit-impaired) when the borrower is unlikely to meet its obligations or when a material amount is more than 90 days past due, consistent with Article 178 CRR. In ING's framework, "default," "credit-impaired," and "non-performing" are equivalent statuses. For retail portfolios, default is applied at the facility level, or at obligor level, following EBA guidelines. "Past due" is any amount unpaid beyond its due date, with default triggered at >90 days, subject to materiality thresholds. ING also applies unlikely-to-pay indicators, such as bankruptcy or restructuring with loss, which can lead to default before 90 days past due. Once defaulted, obligors/exposures are classified as Stage 3 under IFRS 9. Non-performing status continues until conditions are cured and a probation period passes at least one year for forborne loans.

ING applies the IFRS 9 Expected Credit Loss (ECL) model for provisioning, using a three-stage approach. Stage 1 covers performing exposures with no significant increase in credit risk since origination, requiring a 12-month ECL. Stage 2 includes exposures that remain performing but show a significant increase in credit risk since origination (e.g., rating downgrade or >30+ days past due), for which a lifetime ECL is calculated. Stage 3 comprises defaulted (credit-impaired) loans, also subject to lifetime ECL, with interest recognised on a net basis. Provisions are determined through forward-looking models incorporating Probability of Default (PD), Loss Given Default (LGD), and Exposure at Default (EAD), adjusted for macroeconomic forecasts such as GDP, unemployment, and housing prices. ING's Provisioning Committee oversees the process, applying management overlays when models do not fully capture emerging risks. Stage 3 aligns with ING's regulatory default definition, ensuring consistency. Regular back-testing and model updates maintain accuracy, while any shortfall versus regulatory expected loss is deducted from capital. This approach combines quantitative rigor with expert judgment to ensure prudent provisioning.

ING applies the EBA definition of "restructured exposure" for default purposes, which includes concessions granted due to financial difficulty. This aligns with the concept of forbearance in Article 47b CRR.

Performing and Non-Performing Exposures and Related Provisions

The table below provides a breakdown by exposure class of the gross carrying amounts (GCA), the related provisions, partial write offs, and collateral and guarantees, split into performing and non-performing exposures and stages.

The overall exposure in 2025 increased to €1,229.2 billion consists of mainly in Loans and advances: households and other financial corporations. The non-performing exposure decreased to €13.6 billion (1.1% of the total exposure).

EU CR1: Performing and non-performing exposures and related provisions

Maturity of Exposures

In 2025, loans and advances decreased mostly in the 'on demand' and '≤ 1 year' maturity buckets. The debt securities dropped across all maturity buckets and principally in the '> 5 years' maturity bucket.

EU CR1-A: Maturity of exposures						
2025	Net exposure value					
	On demand	≤ 1 year	> 1 year ≤ 5 years	> 5 years	No stated maturity	Total
Loans and advances	230,793	170,254	255,223	491,927		1,148,197

Non-performing by geography

Columns "Of which non-performing" and "of which subject to impairment" are kept empty (greyed) in line with the requirements for institutions with an NPL ratio lower than 5%.

In 2025, the on- and off-balance-sheet exposures on a total level gross carrying amount increased to €1,299 billion, of which €13.6 billion is in default. The defaulted exposure was mainly witnessed in Belgium & Luxembourg and Poland.

EU CQ4: Quality of non-performing exposures by geography

Credit risk mitigation

ING's lending and investment businesses are subject to credit risk. As such, the creditworthiness of our customers and investments is continually monitored for their ability to meet their financial obligations to ING Bank. In addition to determining the credit quality and creditworthiness of the customer, ING uses various credit risk mitigation techniques and instruments to mitigate the credit risk associated with an exposure and to reduce the losses incurred after an event of default on an obligation a customer may have towards ING. The most common terminology used in ING for credit risk protection is 'cover'. While a cover can be an important method for mitigation of credit risk and an alternative source of repayment, generally it is ING's practice to lend on the basis of the customer's creditworthiness rather than exclusively relying on the value of the cover. Within ING, there are two distinct forms of covers: assets and third party obligations.

Cover forms Assets

The asset that has been pledged to ING as collateral or security gives ING the right to liquidate it in the event where the customer is unable to fulfil its financial obligation. As such, the proceeds can be applied towards full or partial payments of the customer's outstanding exposure. An asset can be tangible (such as cash, securities, receivables, inventory, plant & machinery and mortgages on real estate properties) or intangible (such as patents, trademarks, contract rights and licenses).

Third party obligation

Third Party Obligation, indemnification or undertaking (either by contract and/or by law) is a legally binding declaration by a third party that gives ING the right to expect and claim from that third party to pay an amount, if the customer fails on its obligations to ING. The most common examples are guarantees (such as parent guarantees and export credit insurances) and letters of comfort.

Cover valuation methodology

General guidelines for cover valuation are established to ensure consistency of the application within ING. These general guidelines also require that the value of the cover is monitored on a regular basis, in principle at least annually. Covers shall be revalued accordingly and whenever there is reason to believe that the market is subject to significant changes in conditions. The frequency of monitoring and revaluation depends on the type of covers.

The valuation method also depends on the type of covers. For asset collateral, the valuation sources can be the customer's balance sheet (e.g. inventory, machinery, and equipment), nominal value (e.g. cash, receivables), market value (e.g. securities and commodities), an independent appraiser (commercial real estate) and market indices (residential real estate). For third party obligations, the valuation is based on the value that is attributed to the contract between ING and that third party.

For the determination of the Credit Risk applicable amount for Pre-Settlement transactions, ING first matches trades with similar characteristics to determine their eligibility for offset. This offsetting effect is called 'compensation'. Subsequently, ING reduces the amount by any legal netting that may be permitted under various types of Master Agreements (such as ISDAs and GMRAs). Lastly, the amount is further reduced by any collateral that is held by ING under CSAs or other similar agreements.

For the other risk types and especially lending, covers are received that are intended to reduce the losses incurred after an event of default on an obligation a customer may have towards ING. These are subdivided into four groups called collateral values mortgages, cover values cash, cover value guarantees and other physical covers.

Collateral evaluation follows strict internal policies aligned with CRR requirements. Collateral is valued at market value, adjusted for haircuts based on volatility, liquidity and other regulatory requirements. ING has a distinct valuation approach per collateral type. Independent valuation is performed periodically, and collateral is monitored continuously.

The table below presents the ING portfolio excluding equities per loan type. Exposures represent the outstanding and a loan is presented as secured by collateral or a guarantee if such a cover exists on a facility type. The secured amounts represent the part of the loan that is covered by the collateral. If a loan has both collateral and a guarantee than these are both shown in the designated column.

Credit Risk Mitigations techniques – Overview

The table below presents the extent of the use of CRM techniques. All collaterals and financial guarantees are included for all secured exposures, irrespective of whether the SA or the IRB approach is used for RWA calculation. In the column Exposures unsecured – Carrying amount are the exposures (net of allowances/impairments) that do not benefit from a CRM technique.

In the column Exposures to be secured are the exposures that have at least one CRM mechanism (collateral, financial guarantees, credit derivatives) associated with them.

EU CR3 – CRM techniques overview: Disclosure of the use of credit risk mitigation techniques

	Unsecured carrying amount	Secured carrying amount		
		Of which secured by collateral	Of which secured by financial guarantees	
				Of which secured by credit derivatives
2025				
Loans and advances	235,609	640,060	590,878	49,182
Debt securities	106,501	1,282		1,282
Total	342,110	641,342	590,878	50,464
Of which non-performing exposures	2,411	5,952	4,933	1,020
Of which defaulted	6,815	5,952		

For more information on the covers, please see the section 'credit risk mitigation' part of the Risk Management section of the Annual Report 2025.

Collateral obtained by taking possession and execution processes

Table EU CQ7 provides information about the collateral that has been obtained within the reporting period. Collateral obtained by talking possession includes assets that were not pledged by the debtor as collateral, but obtained in exchange for the cancellation of debt.

The value at initial recognition reflects the gross carrying amount at the point in time of the initial recognition in the balance sheet, while accumulated negative changes reflect the difference between the value at initial recognition and the carrying amount at the reporting date.

EU CQ7: Collateral obtained by taking possession and execution processes

	2025	Collateral obtained by taking possession	
		Value at initial recognition	Accumulated negative changes
Property, plant and equipment (PP&E)		3	
Other than PP&E		5	
<i>Residential immovable property</i>		1	
<i>Commercial Immovable property</i>		5	
<i>Movable property (auto, shipping, etc.)</i>			
<i>Equity and debt instruments</i>			
<i>Other collateral</i>			
Total		8	

EU CQ7: Collateral obtained by taking possession and execution processes

	2024	Collateral obtained by taking possession	
		Value at initial recognition	Accumulated negative changes
Property, plant and equipment (PP&E)		2	
Other than PP&E		6	
<i>Residential immovable property</i>		1

Internal Rating Based approach (IRB)

Development of credit risk RWA

The table below explains the changes in Credit RWA in the IRB portfolio during the reporting period and provides additional information by linking the impact of changes in portfolio composition, model changes and shifts in the risk environment on Credit RWA. The table reconciles movements in Credit RWA for the period for each Credit RWA risk type of ING for the IRB portfolio. It does not include counterparty credit risk exposures under the Internal Model Method (IMM), as ING has not yet received regulatory approval to use IMM.

EU CR8 – RWEA flow statements of credit risk exposures under the IRB approach

	2025	2024
	Risk-weighted exposure amount	Risk-weighted exposure amount
Risk weighted exposure amount as at the end of the previous reporting period	192,630	185,711
Asset size (+/-)	18,910	9,487
Asset quality (+/-)	-863	-4,854
Model updates (+/-)	-6,401	-1,197
Methodology and policy (+/-)		
Acquisitions and disposals (+/-)		
Foreign exchange movements (+/-)	-3,030	2,263
Other (+/-)	-19,228	1,219
Risk weighted exposure amount as at the end of the reporting period	182,017	192,630

Over the year 2025, the credit RWA in the AIRB and FIRB (excluding pre-settlement) decreased by € 10.6 billion from € 192.6 billion to € 182.0 billion.

- Asset Size impact was mainly in Retail Banking, in line with strong portfolio growth, particularly on mortgages;
- Asset quality improvements caused RWA to decrease in 2025; the impact is smaller than in 2024, amongst others, due to a methodology improvement to classify RWA movements;
- Total Model / Methodology impact includes multiple model updates;
- FX impact caused RWA to decrease mainly due to the depreciation of the US dollar;
- Other items decrease are mainly due to Basel4 Day1 RWA impact, Significant Risk Transfers in Wholesale Banking and reclassification of some portfolios to Standardised Approach.

Overall, RWA management has a high priority throughout ING in all aspects of our business. From product design to pricing, RWA allocation and consumption are extensively monitored, reported and managed at all levels of the organisation.

Scope of the use of IRB and SA approaches

IRB approach

ING applies the Internal Ratings-Based (IRB) approach across a large proportion of its credit portfolios. and the template EU CR6-A, outlines exposure values by exposure class and clarifies where IRB models are in use versus standardised methodologies.

ING provides a comprehensive governance and control framework that applies consistently across both Advanced (AIRB) and Foundation (FIRB) IRB portfolios. This framework covers the full model lifecycle: development, independent validation, implementation, change management, and periodic monitoring. Risk Management designs, governs and challenges all IRB rating systems, while Internal Audit (CAS) independently assesses the effectiveness of controls and adherence to procedures. Functional separation is strictly enforced: Model Development creates, recalibrates and documents models, whereas independent review functions such as the Credit Risk Control Unit (CRCU), Model Change Oversight (MCO), the Change Board, and CAS evaluate methodology, regulatory compliance, change classifications, and evidence quality.

Rating systems undergo continuous review through annual monitoring, back-testing, materiality assessments and change classification processes. The Change Board challenges methodological soundness and documentation, ensuring submissions to the ECB and that classification choices are consistent with policy. Committees such as the Credit Risk Committee (CRC), Global Financial Risk Committee (GFRC), Credit Risk Model Committee (CRMC), and Model Risk Management Committee (MoRMC) provide final approvals depending on materiality and scope. Clear accountability is embedded: the Change Owner prepares change applications and ensures regulatory alignment; Rating System Owners maintain full and accurate inventories; independent oversight bodies validate compliance, challenge assumptions, and safeguard objectivity; senior committees ensure governance-level ownership; and CAS provides periodic assurance.

ING uses internally developed PD, LGD and CCF models tailored to each exposure class. PD models rely on statistical, hybrid or expert-based approaches, including pooled datasets for low-default portfolios, and are calibrated to long-run default rates. LGD models use workout or hybrid methods, incorporate collateral and recovery experience, and apply downturn conservatism. CCF models estimate off-balance-sheet utilisation based on product behaviour and historical drawdowns. All models undergo robust validation through back-testing, benchmarking, and monitoring of assumptions to ensure conservatism and regulatory compliance. IRB-related outputs are embedded in both Pillar 3 disclosures and internal risk reporting, supporting transparent RWA and risk exposure measurement.

IRB credit exposures by exposure class and PD range

The table below provides an overview of the main parameters used for the calculation of capital requirements for IRB models. The on- and off-balance sheet exposures are shown by the four main exposure classes and according to PD grades to enable an assessment of the credit quality of the portfolio. The exposures are bucketed in PD Scales prescribed by EBA. This bucketing of PD scales is not used within ING. ING's Probability of Default (PD) rating

models are based on a 1-22 scale, which corresponds to the same rating grades that are assigned by external rating agencies. Risk Ratings (PD) for performing loans (1-19) are calculated within ING with regulatory approved models. Risk Ratings for non-performing loans (20-22) are set on the basis of an approved discretionary methodology by the Global or Regional Restructuring unit. Overall, the risk weights of the ING portfolio are a mixture of low risk weights for sovereigns and residential mortgages, combined with higher risk weights for Corporates. Many central governments' exposures receive a zero risk weight due to the high-quality rating. Mortgages generally

benefit from large levels of (over) collateralisation.

The average Credit Conversion Factor (CCF), which is the conversion of off-balance sheet exposure into credit exposure equivalents, is calculated as the off-balance exposure post-CRM and post-CCF over the original off-balance sheet exposure. The CCF percentages are applied on the product or transaction level and are regulatory driven.

Please note that the A-IRB Regulatory Government portfolio is not displayed, as it contains no exposures.

The PD, LGD, EAD and maturity are drivers of RWA and RWA density. RWA density are measured as the RWA over the EAD and increases with each PD scale. In several instances, the RWA Density is lower than one might expect due to the loans guaranteed by an Export Credit Agency (ECA). For instance, in Corporates-Other, cashpool activities from BMG are included, causing a low RWA density. These ECAs offer loans and insurance to help remove the risk of uncertainty of

exporting to other countries and underwrite the political risk and commercial risks of overseas investments, and as such lower the LGD for these loans. With very low LGDs, as a result, the RWA is lower than would be assumed in a higher PD class.

Compared to 31 December 2024, the overall IRB-based RWA amount decreased from €193.1 billion to €181.7 billion, driven largely by the regulatory transition to CRR3.

Backtesting of model parameters

ING has dedicated IRB credit risk models per business line and geography. The performance and predictive power of the models are monitored by Model Development. Moreover, an independent Model Risk Management department periodically reviews all IRB models. All models are backtested when possible by both the Model development and the independent Model Risk Management departments.

If a model is considered not to be robust or backtesting indicates insufficient performance, then the model is either re-calibrated or re-developed. All model recommendations from the Model Risk Management department are tracked via an internal database that management uses to track issues detected by the Internal Audit department, incidents and non-financial risk issues. All significant model changes are submitted to the ECB and implemented after regulatory approval.

PD backtesting

The PD backtesting is performed per exposure class and PD-range, which are reported in the CR9 templates below.

EU CR9 –IRB approach – Back-testing of PD per exposure class (only for PD estimates)

Simple risk weight method

A small part of the equity exposure of ING's portfolio is subject to the simple risk-weight method for calculating the regulatory capital. The table below shows more details on the equity exposure for which the simple risk weight method is used.

EU CR10.5 – Equity exposures under the simple risk-weighted approach		
Equity exposures under Articles 133 (3) to (6) and Article 495a(3) CRR		
	2025	
Equity exposures		On balance sheet amount
		Off balance sheet amount
Total		4,543
		10,532

EU CR10.5 – Equity exposures under the simple risk-weighted approach					
Equity exposures under the simple risk-weighted approach					
	2024				
Categories	On balance sheet amount	RW	Exposure amount	RWA	Capital requirements
Private equity exposures	141	290%	141	409	33
Exchange-traded equity exposures	523	190%	523	993	79
Other equity exposures		370%			
Total	664		664	1,402	112

Standardised Approach

List of the nominated ECAI/ECA per exposure class/item class

Based on Article 444, ING is required to disclose the names of the nominated ECAIs and ECAs and the reasons for any changes in those nominations over the disclosure period, and the exposure classes for which each ECAI or ECA is used.

Name of the nominated ECAI			
	Type of the External Rating	Exposure class	Item Class
KBRA	Transaction rating	Institutions/Corporate	Capital Call Facilities
Fitch	Transaction rating	Institutions/Corporate	Capital Call Facilities
AM Best	Issuer rating	Institutions/Corporate	Insurance Companies
Scope Rating Agency	Transaction Rating	Institutions/Corporate	Money Market Fund
Scope Rating Agency	Issuer Rating	Institutions/Corporate	Automotive Finance
Moody's	Issuer/Issue rating (related to public ratings – availability as specified in the External Ratings Procedure)	All exposure classes	For all asset types
Fitch			
S&P			

Name of the nominated ECA			
	Type of the External Rating	Exposure class	Item Class
Atradius Dutch State Business (DSB) and consensus Country Risk Classification (Art 137(1))	When the external rating of nominated ECAI is not available for the exposure class: central governments or central banks, ING can use credit assessments of the nominated ECA (based on MEIP score)	Central governments or central banks	For all asset types of the respective exposure class

In 2025, Scope Rating Agency was added to the pool of ECAIs nominated by ING to enhance the capital efficiency of certain transactions after the implementation of CRR3.

ING receives issue and issuer data feeds from the nominated ECAIs on external credit assessments (also known as external ratings). This is provided for the intended scope and in line with the internal rating strategy.

For all types of issuer level external ratings, 1st line of defence inserts the reference ID to an ECAI in the internal system, which then automatically gets the external rating from the data feed. The trigger to get the rating into the internal system is to activate the respective cross-reference with the ID. That is used to match the correct entity in the internal system and upload its rating data.

For a certain type of issue level external ratings, 1st and 2nd line of defence feeds the external ratings directly into the system, where the equivalent CQSs to the external ratings are stored in a reference data table format. Reference data tables are updated and distributed to all subscribed systems. For the remaining types of issue level external ratings, the Bloomberg code is used to automatically obtain the external ratings into internal systems.

After the obtained external ratings/CQSs are processed by 1st and 2nd line of defence in the system, they are automatically fed into the internal system for RWA calculations. The process for SA calculation is automated, and it does not allow for manual intervention. CQS at the issue level follow the same process for SA calculations as any external rating at the issuer level.

ING uniquely relies on the standard association between external ratings and CQS as published by EBA.

Exposures before and after risk mitigation for the SA portfolio

The table below shows how credit risk mitigation (CRM) in the SA portfolio is distributed over the exposure classes. ING's exposure value is shown before and after credit risk mitigation. There are three principal methods for reducing or mitigating Credit Risk: i) by reduction of credit risk through the acceptance of pledged financial assets as collateral or mitigation or shifting of credit risks to a lower risk weighting group, ii) by accepting guarantees from unrelated third parties, or iii) secured by mortgages. ING uses these methods to take CRM effects into account. For financial markets collateral, ING uses the Financial Collateral Comprehensive Method to allow for mitigation effects.

The table below illustrates the effect of all CRM techniques applied in accordance with Part Three, Title II, Chapter 4 of Regulation (EU) 575/2013 on the standardised approach capital requirements' calculations.

EU CR4 – standardised approach – Credit risk exposure and CRM effects

Exposure classes	2025		Exposures before CCF and before CRM		Exposures post CCF and post CRM		RWAs and RWAs density

The changes in the table above in 2025 are mainly explained by the revised treatment of some portfolios following implementation of the CRR3.

Risk weights per exposure class

The table below presents the breakdown, post conversion factor and post risk mitigation techniques of exposures under the Standardised approach by exposure class and risk weight (corresponding to the riskiness attributed to the exposure according to the SA approach). The risk weights presented encompass all those assigned to each credit quality step in Article 113 to Article 134 in Part Three, Title II, Chapter 2 of Regulation (EU) 575/2013. The main exposure of the SA portfolio is in the Central governments or central banks with a low risk-weight.

Counterparty Credit Risk

The main activities that qualify under counterparty credit risk are derivatives trading activities and securities financing. To mitigate the credit risk of these transactions, ING enters into master agreements such as ISDA master agreements and Global Master Repurchase Agreements (GMRAs) that ensure netting of the outstanding positions. To further eliminate the risk on the netted positions, both ING Bank and its counterparties may agree to pledge additional collateral to each other. The actual amount that ING may be required to pledge varies based on ING's portfolio composition of both derivatives and securities pledged in securities financing transactions, market circumstances, the number of downgrade notches, as well as the terms and conditions of future CSAs or other similar agreements.

CCR risk approach

Analysis of the counterparty credit risk exposure by approach

The main purpose of the derivatives portfolio of ING is to facilitate the hedging of the lending portfolio as well as hedging for clients. The portfolio consists mainly of plain vanilla interest rate and foreign exchange derivatives. It must also be noted that - in line with regulatory requirements - ING novated the bulk of its new trades via qualifying central counterparties (CCPs), which compresses the exposure via the use of the large netting pool of a CCP.

In the tables below, ING's counterparty credit risk portfolio is presented. The tables are reported following the implementation of the updated reporting requirements under CRR3, as a result comparative numbers are not available for all the templates. Under Pillar 1, ING uses the Standardised Approach for Counterparty Credit Risk to determine the exposure value (SA-CCR) (in line with CRR art. 274). In June 2021, ING went live with the SA-CCR, which replaced the current exposure method (CEM)/ mark-to-market method. There are no exposures under the advanced, Internal Model Method (IMM) under Pillar1. Under Pillar 2, however, for FX and interest rate derivatives, ING uses a risk sensitive approach based on Monte Carlo simulations.

Under Pillar 1, according to the SA-CCR, the regulatory exposure at default (READ) measure consists of the replacement cost and potential future exposure components. The exposure at default is calculated on a daily basis to take into account the changes in the MTM value due to market movements and changes in the portfolio composition. This calculation is done on:

- Gross basis (ignoring any collateral received and ignoring any netting between trades).
- Net basis (ignoring any collateral received, but applying netting between trades with a positive and negative MTM in case there is a legally enforceable netting agreement in place).
- Net basis after collateral (subtracting any post haircut value of collateral received, and applying netting between trades with a positive and negative MTM in case there is a legally enforceable netting agreement in place).

READ also takes into account the credit valuation adjustment (CVA) recognised as an incurred write-down in line with art. 273(6) CRR.

Standardised approach – CCR exposures by regulatory portfolio and risk

The following table presents the CCR exposures that are calculated according to the Standardised approach (SA), which is only an insignificant part of ING's portfolio.

RWA density is the average risk weight.

Collateral held on exposure values

Collateral

The composition of collated ING posted/received used in CCR exposures and related to SFT transactions can be observed in the following table.

EU CCR5 – Composition of collateral for CCR exposures

Collateral type	2025 Collateral used in derivative transactions				Collateral used in SFTs			
	Fair value of collateral received		Fair value of posted collateral		Fair value of collateral received		Fair value of posted collateral	
	Segregated	Un-Segregated	Segregated	Un-Segregated	Segregated	Un-Segregated	Segregated	Un-Segregated
Cash – domestic currency	5,423	1,914	1,006	2,276		419		2,170
Cash – other currencies	512	1,316	2,103	1,422		264		838
Domestic sovereign debt	1,141	313	3,647	509		43,518	814	52,057
Other sovereign debt	912	977	3,047	18		103,094	622	77,823
Government agency debt								
Corporate bonds	864	344	1,207			12,280		15,162
Equity securities						18,880		10,361
Other collateral	864	39				67,284		79,281
Total	9,715	4,901	11,010	4,224		245,739	1,436	237,692

Excluding exposure class securitisation

EU CCR5 – Composition of collateral for CCR exposures

Collateral type	2024 Collateral used in derivative transactions				Collateral used in SFTs			
	Fair value of collateral received		Fair value of posted collateral		Fair value of collateral received		Fair value of posted collateral	
	Segregated	Un-Segregated	Segregated	Un-Segregated	Segregated	Un-Segregated	Segregated	Un-Segregated
Cash – domestic currency	2,160	2,049	2,001	2,580	6	306		2,220
Cash – other currencies	645	2,148	4,278	1,110		912		1,469
Domestic sovereign debt	940	312	2,892	435		52,608	1,588	53,441
Other sovereign debt	1,087	627	2,507	15		106,808	618	95,539
Government agency debt						43		52
Corporate bonds	499	575	1,268			14,173		11,758
Equity securities						25,854		21,588
Other collateral	740					52,016		78,574
Total	6,070	5,712	12,946	4,141	6	252,721	2,206	264,640

Excluding exposure class securitisation

The bulk of collateral posted/received is in cash and government bonds for OTC derivatives. For SFTs the majority of collateral received is sovereign debt, while the collateral posted is predominantly sovereign debt, corporate bonds and other collateral.

Central Counterparties

In line with EMIR regulation - for standard products - the use of Central Clearing Parties (CCPs) is mandatory and thus a large part of the portfolio has been shifted from bilateral trades to CCPs in recent years

The table below presents the exposures to central counterparties, broken down by qualified (QCCP) and non-qualified CCPs:

EU CCR8 – Exposures to CCPs

	2025		2024	
	Exposure value	RWEA	Exposure value	RWEA
Exposures to QCCPs (total)		501		333
Exposures for trades at QCCPs (excluding initial margin and default fund contributions); of which	6,984	156	4,372	91
(i) OTC derivatives	3,518	71	2,614	56
(ii) Exchange-traded derivatives	1,772	51	843	17
(iii) SFTs	1,693	34	915	18
(iv) Netting sets where cross-product netting has been approved				
Segregated initial margin				
Non-segregated initial margin				
Prefunded default fund contributions	1,063	345	865	242
Unfunded default fund contributions				
Exposures to non-QCCPs (total)		32		11
Exposures for trades at non-QCCPs (excluding initial margin and default fund contributions); of which	3	3	7	7
(i) OTC derivatives	3	3	7	7
(ii) Exchange-traded derivatives				
(iii) SFTs				
(iv) Netting sets where cross-product netting has been approved				
Segregated initial margin				
Non-segregated initial margin				
Prefunded default fund contributions	2	29		4
Unfunded default fund contributions				

¹ By definition, segregated initial margin does not contribute to exposure

² The status "qualified" is based on the European Securities and Markets Authority (ESMA) qualification.

Note: ING reports CCPs as "qualified" CCPs (QCCPs) if they have files for the European Securities and Markets Authority (ESMA) approval, which enables credit institutions to calculate capital in a preferential way.

Credit default swaps

ING participates in the credit risk derivative trading market as a net purchaser of credit risk protection from other counterparties.

EU CCR6: Credit derivatives exposures

	2025		2024	
	Protection bought	Protection sold	Protection bought	Protection sold
Notionals				
Single-name credit default swaps	11,382	7,274	11,725	8,154
Index credit default swaps	5,563	3,897	9,960	7,736
Total return swaps	5,143	8	4,235	
Credit options				
Other credit derivatives				
Total notionals	22,088	11,179	25,920	15,889
Fair values				
Positive fair value (asset)	84	227	21	288
Negative fair value (liability)	-337		-615	

For ING's credit derivative positions as of 31 December 2025, the largest notional is under single-name credit default swap (CDS).

Credit valuation adjustment risk

The Counterparty Exposure Management (CEM) Hedging operates under a risk-neutral framework, with no directional trading intent. The function is focused solely on offsetting accounting XVA (Credit, Debit, Funding and Collateral Valuation Adjustment) reserve movements rather than taking directional trading positions. However, achieving true risk neutrality is inherently complex. It demands a clear and shared definition of risk neutrality, especially given the presence of basis risks, model assumptions, and the need for proxy hedging across multiple risk factors. Given the inherent complexity and dynamic nature of the XVA reserve position, perfect neutrality is unattainable. As such, the desk operates under defined trading limits across the various risk factors that drive P&L. These limits are essential to ensure that hedging activity remains controlled, transparent, and aligned with the desk's mandate. Ideally, trades that hedge accounting reserve movements would also qualify for capital mitigation. However, this is not always the case. Consequently, trades may be executed that do not deliver accounting benefits but do reduce capital consumption.

Furthermore, FM CEM must record eligible CVA hedges in dedicated book(s), which are included for CVA capital calculations. Separate books exist for non-eligible hedges, such hedges are capitalized under the market risk framework. Internal reporting includes periodic checks on hedge eligibility correctness. The LCS (Limit Control Sheet), which is owned by Financial Risk (FR) TRM, specifies the relevant limits and eligibility conditions for hedging. Consequently, FR TRM provides risk management on eligible CVA hedging.

ING uses the SA-CVA method as the basis for both internal risk measurement and for regulatory reporting. The approach requires calculation of SA-CVA sensitivities for the modelled regulatory CVA exposures and eligible CVA hedges. ING received approval for using this approach from the JST/ECB.

In case it is not possible to use the SA-CVA method (e.g., for regulatory or technical reasons), the BA-CVA approach is chosen. The internal model documentation by FR TRM explains on when and how to choose between SA- and BA-CVA. FR and Model Development/Model Quants apply appropriate change management to all CVA related models, in accordance with ING model governance.

ING does not use the simplified approach set out in Article 385 of the CRR.

EU CVA 1 – Credit valuation adjustment risk under the Reduced Basic Approach (R-BA)		
	2025 Components of Own Funds Requirements	Own Funds Requirements
Aggregation of systematic components of CVA risk		123
Aggregation of idiosyncratic components of CVA risk		27
Total		43

Within ING, CVA risk is subject to the three-lines-of-defence model. From a first-line perspective, CEM business within Financial Markets, i.e. FM CEM, manages and hedges CVA risk in line with agreed business strategy and risk appetite (set by MBB/GFRC).

Senior management is involved in CVA risk management via:

- Trading and Counterparty Risk Committee (TCRC), consisting of senior management of both the first and second line, and chaired by the global head of Financial Risk, approves decisions on CVA risk management (as defined in ING's TCRC Charter). The overall RAS is defined by MBB (most importantly in the GFRC (Global Financial Risk Committee) to which TCRC reports.
- The MoRMC (Model Risk Management Committee) (if not delegated to TCRC) can decide upon significant CVA modelling decisions. For example, the MoRMC/TCRC is consulted for the remediation of model validation findings, the use of add-ons and the approval of (material) models.
- Senior Management receives daily (internal) reporting on XVA risks and corresponding P&L. The consolidated market risk report for Financial Markets (FM) is sent to the senior management daily and contains a granular view on the market risks: VaR and SVaR. It also includes a limit overview that visualises the VaR daily variations and limit utilisations. Limit breaches are highlighted separately.
- Additionally, regulatory and economic CVA capital figures are being reported on a monthly basis to FR management team and the Capital and ALM Risk committee (CARC).

The governance on CVA Risk follows a three-lines-of-defence set-up. Departments with a substantial role and their corresponding responsibilities are shown below:

- First line of defence:
 - FM CEM: model owner of accounting CVA model, actively manages and hedges the CVA exposures (within the limit framework and in line with ING's strategy).
 - Front Office Quants/Model Development: Support on technical modelling (model development and implementation) and implementation of business initiatives into modelling.
 - WB Tech FM GT/ Front Office Quants/: IT implementation of CVA measurement and modelling.
- Second line of defence:
 - FR TRM: model owner of CVA risk models, risk management for CVA measurement and management.
 - FR P&R (Policies and Regulations): Owns internal control documents for financial risk related to CVA, most importantly the CVA Policy.
 - MoRM/Model Validation: Validation of CVA modelling.
- Third line of defence:
 - CAS (Corporate Audit Services): ING's internal audit function provides insight and has the responsibility that the existing internal controls are adequate and that governance and risk management processes are effective.

tive for CVA management and measurement. CAS oversees the first and second lines of defence and raises CAS findings.

Securitisations

The following is prepared taking into account the 'Industry Good Practice Guidelines on Pillar 3 disclosure requirements for securitisations' issued by the European Banking Federation and other industry associations on 31 January 2010, and the CRR/CRD IV disclosure requirements. It includes qualitative and quantitative disclosures addressing both the exposure securitised as well as securitisations positions held. While quantitative disclosures are limited to those securitisations that are used for the purpose of calculating the regulatory capital requirements under the CRR/CRD IV, qualitative information has a broader scope and gives a view on ING's entire securitisation activity.

Depending on ING's role as investor, originator, or sponsor, the objectives, the involvement and the rules applied may be different. ING is primarily engaged in securitisation transactions in the role of investor (in securitisations arranged by others). ING is also an originator or sponsor of securitisations and the latter through its support of the ABCP conduit MontBlanc. ING does not re-securitise its securitisations exposure, and even though ING hedges its securitisation positions, such instruments are not recognised as credit risk mitigation for regulatory capital purposes. ING does not engage in securitisation of any impaired assets from its own balance. Furthermore, ING does not have any securitisation position in its trading book.

Exposures associated with Securitisations (Asset Backed Financing, Commercial / Residential Mortgage Backed Securities) are shown separately because of their specific treatment. These amounts also relate to the amount invested before any impairment or mark-to-market adjustments. These amounts are also considered to be 'Credit Risk outstanding'.

Valuation and accounting policies

ING's activities regarding securitisations are described in Note 44 'Structured entities' in the annual accounts. The applicable accounting policies are included in Note 1 'Basis of preparation and significant accounting' in the ING Financial Statements. The most relevant accounting policies for ING's own originated securitisation programmes are 'Derecognition of financial assets' and 'Consolidation'. Where ING acts as an investor in securitisation positions, the most relevant accounting policy is 'Classification and measurement of financial instruments'.

Regulatory capital methodology

ING has implemented SEC-IRB, SEC-SA, SEC-ERBA and SEC-IAA in line with of Regulation 2017/2401. This regulation became effective for securitisations originated as of 1 January 2019 and as of 1 January 2020 for all securitisation positions.

For securitisations originated before 1 January 2019, ING continued to use the AIRB approach for credit risk. For these positions ING uses the Rating Based Approach (RBA) for investments in tranches of asset-backed securities (ABS) and mortgage-backed securities (MBS), which have been rated by external rating agencies. Rating agencies which are used by ING under the RBA include Standard & Poor's, Fitch and Moody's.

Under the RBA, RWA are determined by multiplying the amount of the exposure by the appropriate regulatory risk weights, which depend on: the external rating or an available inferred rating, the seniority of the position and the granularity of the position.

ING uses the Internal Assessment Approach (IAA) for the liquidity support facilities it provides to Asset Backed Commercial Paper (ABCP) conduit Mont Blanc Capital Corp., based on externally published rating agency methodologies. Under the IAA approach, the unrated position is assigned by the institution to an internal rating grade. The individual liquidity facilities are then attributed a derived rating by mapping the internal rating grade to an externally published credit assessment corresponding to that rating grade.

For securitisations originated after 1 January 2019, ING applies the hierarchy of methods as introduced in Regulation 2017/2401. Following the prescribed hierarchy securitisation positions are reported under SEC-IRBA, SEC-SA, SEC-ERBA or SEC-IAA. As of 1-1-2020, all securitisation positions will be reported under the SEC-IRBA, SEC-SA, SEC-ERBA or SEC-IAA approach based on the regulatory hierarchy of methods.

Under all approaches in the hierarchy, the risk weight for STS-compliant securitisations is subject to a floor of 10% for senior tranches and 15% for non-senior tranches.

Investor securitisations

ING's goal is to maintain a portfolio of high-quality liquid assets that meets the regulatory requirements of CRR/CRD IV and the Delegated Act of October 2014 regarding liquidity. ING invests in high-quality Asset Backed Securities (ABS), keeping close track of the securitisation investment positions via monthly monitoring reports and weekly update calls. Additionally, ING invests in securitisation positions to facilitate client business from the Wholesale Banking Securitisation department.

Sponsor securitisations

In the normal course of business, ING structures financing transactions for its clients by assisting them in obtaining sources of liquidity by selling the clients' receivables or other financial assets to a Special Purpose Vehicle (SPV). The senior positions in these transactions are funded by the ING administered multi seller Asset Backed Commercial Paper (ABCP) conduit Mont Blanc Capital Corp. (rated A-1/P-1). Mont Blanc Capital Corp. funds itself externally in the ABCP markets.

In its role as administrative agent, ING facilitates these transactions by acting as administrative agent, swap counterparty and liquidity provider to Mont Blanc. ING also provides support facilities (liquidity) backing the transactions funded by the conduit. The types of assets currently in the Mont Blanc conduit include trade receivables, consumer finance receivables and car leases.

ING supports the commercial paper programmes by providing Mont Blanc Capital Corp. with short-term liquidity facilities. Once drawn, these facilities bear normal credit risk.

The standby liquidity facilities are reported under irrevocable facilities. All facilities, which vary in risk profile, are granted to the SPV subject to normal ING credit and liquidity risk analysis procedures. The fees received for services provided and for facilities are charged subject to market conditions. Mont Blanc is consolidated by ING. These transactions are therefore on-balance sheet arrangements.

In line with the Internal Assessment Approach, which has been approved for use by ECB for ING in relation to the ING sponsored ABCP conduit, Mont Blanc Capital Corp, the credit quality of the positions is internally assessed by following publicly available assessment methodology of external rating agencies. This includes differing stress factors for different asset classes as outlined by rating agencies, as well as assessing the entire structure of the transaction, including additional quantitative and qualitative features. This will result in the calculation of a certain credit enhancement. Other protections in a transaction (eligibility criteria, early amortization triggers, commingling protections, etc.) are factored in and that then results in an internal rating. This rating is then directly mapped to an external rating, which is used to determine the RWA for the liquidity facilities provided by ING to support the transactions and is outlined in a defined approach. Any changes to rating agency methodology are tracked annually with a procedure in place within the credit risk measurement department, that verifies that any changes are captured in an update to the approach.

The credit approval process for individual transactions follows ING's standard credit approval procedures. At inception, initial data is required to be received outlining the historical performance of the assets. Due diligence is carried out on the underlying asset pool. Following ING policy, each transaction is reviewed (including reassessing the internal assessment approach analysis for that transaction) regularly. The performance of each transaction is closely monitored on an ongoing basis through a.o. detailed transaction reports.

Originator securitisations – liquidity and funding purposes

ING originates its own securitisation transactions for liquidity and funding purposes. For such securitisation transactions, the senior tranches are used to obtain funding and/or provide contingent liquidity. To be eligible as collateral for central banks, securitised exposures must be sold to a Securitisation Special Purpose Entity (SSPE) which, in turn, issues securitisation notes ('traditional securitisations') in two tranches, one subordinated tranche and one senior tranche, rated AAA by a rating agency. The AAA tranche can then be used by ING as (stand-by) collateral in the money market for secured borrowings. The assets awaiting securitisations are originated from a banking book and are valued in line with the respective accounting framework. In principle, loans that are securitised are valued at cost. As long as the subordinated securitisation tranches created are not transferred to third parties, the regulatory capital remains unchanged as well as the accounting and regulatory reporting treatment. Apart from the structuring and administration costs of these securitisations, they are profit/loss neutral.

Originator securitisations – risk and regulatory capital purposes

ING also originates its own securitisation transactions in order to transfer exposure on portfolios of credit risk. Often classed as Significant Risk Transfer (SRT) securitisations, these transactions are typically executed in a synthetic format, whereby ING retains ownership of the underlying credit assets, but purchases protection on first loss or mezzanine tranches of the exposure. Protection is normally purchased in the form of a financial guarantee or credit-linked note.

When structured and executed in compliance with relevant regulations and approved by the competent authority, these SRT's can result in reductions in Risk Weighted Assets associated with the underlying portfolios.

Securitisation Exposure

In the table below, the securitisations are given, broken down by underlying exposure. The total position of our securitisations in 2025 increased to €30.3 billion (2024: €18.1 billion) following an increase in SRT securitisations. The underlying exposures are loans to corporates and Lease and receivables.

Market Risk

Market Risk Strategy, Governance, and Reporting Framework

ING's market risk primarily originates from the Financial Markets business. ING Financial Markets operates as a core product pillar within ING Wholesale Banking, supporting corporate and institutional clients with FX, Rates, Credit, Equity & Commodity solutions in the form of hedging, financing, and risk management products. ING Financial Markets is not run as a standalone trading organisation, but as a client-driven, balance sheet disciplined business that reinforces ING's role as a core relationship bank.

Market risk management processes are embedded within the bank's overall risk framework, guided by the Risk Appetite Framework (RAF) and overseen by the Supervisory Board's Risk Committee, which holds responsibility for all market risks. ING uses a comprehensive set of methodologies and techniques to measure market risk in trading books, including Value at Risk (VaR) and Stressed Value at Risk (SVaR), Incremental Risk Charge (IRC), and Stress Testing. Systematic validation processes are in place to validate the accuracy and internal consistency of data and parameters used for the internal models and modelling processes. This is reinforced by P&L analysis, model monitoring and backtesting processes that validate the continued effectiveness of hedges.

Market risk management is embedded within ING's centralized risk governance framework. The Supervisory Board's Risk Committee holds ultimate oversight for market risk, ensuring strategic alignment and regulatory compliance. Day-to-day management is supported by the independent risk management function under the Chief Risk Officer (CRO), who is a member of the Executive Board. This function operates as the second line of defence within the bank's 'three lines of defence' model, providing independent challenge and control over market risk activities. The relationship between the business units, primarily Financial Markets as the first line, and the independent risk control function is clearly defined by this model. The Trading and Counterparty Risk Committee (TCRC) is the market risk committee that, within the risk appetite set by the Group Financial Risk Committee (GFRC), sets the market risk limits both on an aggregated level and a desk level. The TCRC has delegated authority from GFRC for the management of market risk related to all trading and banking book activities within Financial Markets (FM).

Market risk is regularly reported at the highest governance level within ING. That includes the Supervisory Board's Risk Committee, the GFRC and the TCRC. TCRC sets, within the risk appetite set by the GFRC, the market risk limits both on an aggregated level and a desk level. Measurement systems are embedded in the risk framework and include advanced risk models and stress testing practices. In addition, scenario and sensitivity analyses are applied to assess the impact of changing market conditions, including interest rate movements, on the bank's portfolio. This integrated approach combines quantitative modelling with forward-looking stress testing, supporting proactive risk management and strategic decision-making.

Market risk under the standardised approach

The table below explains the changes in Market RWA under the standardised approach during 2025 and provides additional information by linking the impact of changes in portfolio composition, model changes, and shifts in the risk environment on Market RWA.

EU MR1 - Market risk under the standardised approach		
	2025	2024
	RWA	RWA
Outright products		
1 Interest rate risk (general and specific)	92	31
2 Equity risk (general and specific)		
3 Foreign exchange risk	4,968	4,374
4 Commodity risk		
Options		
5 Simplified approach		
6 Delta-plus method		
7 Scenario approach		
8 Securitisation (specific risk)		
9 Total	5,060	4,405

Market RWA under the internal model approach (IMA)

Total Market Risk Regulatory RWA for the Trading Book has decreased in 2025 from 2024 by €0.2 bln. The move is mainly driven by a decrease in (S)VaR, partly offset by the increased IRC and Other (RNIME).

EU MR2-A: Market risk under internal model approach

		2025		2024	
		RWA	Total own funds requirements	RWA	Total own funds requirements
1	VaR (higher of values a and b)	1,521	122	1,964	157
(a)	Previous day's VaR (VaRt-1)		33		49
(b)	Multiplication factor (mc) x average of previous 60 working days (VaRavg)		122		157
2	SVaR (higher of values a and b)	2,877	230	4,915	393
(a)	Latest available SVaR (SVaRt-1))		51		116
(b)	Multiplication factor (ms) x average of previous 60 working days (sVaRavg)		230		393

(b)	12 weeks average IRC measure		161		117
4	Comprehensive risk measure (higher of values a, b and c)				
(a)	Most recent risk measure of comprehensive risk measure				
(b)	12 weeks average of comprehensive risk measure				
(c)	Comprehensive risk measure - Floor				
5	Other	582	47	340	27
6	Total	6,994	560	8,676	694

The table below explains the changes in Market RWA under the Internal Model Approach (IMA) during 2025 and provides additional information by linking the impact of changes in portfolio composition, model changes, and shifts in the risk environment on Market RWA.

EU MR2-B: RWA flow statements of market risk exposures under the IMA

		2025					2024			
		VaR	SVaR	IRC	Comprehensive risk measure	Other	Total RWEAs	Total own funds re-quirements	Total RWEAs	Total own funds re-quirements
1	RWEAs at previous period end	1,964	4,915	1,457		340	8,676	694	9,449	756
1a	Regulatory adjustment	1,356	3,469	3			4,828	386	6,023	482
1b	RWEAs at the previous quarter-end (end of the day)	608	1,446	1,454		340	3,848	308	3,426	274
2	Movement in risk levels	-192	-805	349		242	-407	-33	422	34
3	Model updates/changes									
4	Methodology and policy									
5	Acquisitions and disposals									
6	Foreign exchange movements									
7	Other									
8a	RWEAs at the end of the disclosure period (end of the day)	416	641	1,803		582	3,441	275	3,848	308
8b	Regulatory adjustment	1,105	2,236	212			3,553	284	4,828	386
8	RWEAs at the end of the disclosure period	1,521	2,877	2,014		582	6,994	560	8,676	694

- It is required to fill in Rows 1a/1b and 8a/8b when the RWA/capital requirement for any of the columns (VaR, SVaR, IRC) is the 60-day average (for VaR and SVaR) or the 12-week average measure (for IRC) and not the RWA/capital requirement at the end of the period. According to regulatory guidelines the values in rows 1a/8b are calculated as differences between values in rows 1 and 1b and 8 and 8a, respectively.
- Movement in risk levels: Changes due to position changes between end-of-day values for two reporting periods in question.

The ING Bank Market RWA under the Internal Model Approach decreased from €8.7 billion in 2024 to €7.0 billion in 2025.

Internal Model Framework for Market Risk: Tradability, Valuation, VaR/SVaR and IRC Methodologies

The trading book positions are typically held with the intention of short-term trading or to hedge other positions in the trading book. Policies and processes are in place to monitor the inclusion of positions in either the trading or banking book, as well as to monitor the transfer of risk between the trading and banking books. Part of this framework is a holding period for securities.

In addition, within the Valuation Control Framework, the Global Valuation and Impairment Committee is responsible for the oversight and approval of the valuation processes. It oversees the quality and coherence of valuation methodologies and performance. As part of this process, the Trading and Counterparty Risk Committee is responsible for the approval of all valuation models used for the Fair valuation (IFRS) and Prudent Valuation (CRR) of positions measured at fair value.

ING uses a comprehensive set of methodologies and techniques to measure market risk in trading books:

- Value at Risk (VaR) and Stressed Value at Risk (SVaR), Incremental Risk Charge (IRC), and stress testing. Systematic validation processes are in place to validate the accuracy and internal consistency of data and parameters used for the internal models and modelling processes.
- TRM uses the historical simulation VaR methodology (HVaR) as its primary risk measure. The HVaR for market risk quantifies, with a one-sided confidence level of 99 percent, the maximum overnight loss that could occur in the trading portfolio of ING due to changes in risk factors (e.g. interest rates, equity prices, foreign exchange rates, credit spreads, implied volatilities), considering the positions remain unchanged for a time period of one day.
- Next to general market movements in these risk factors, HVaR also takes into account market data movements for specific moves in, for example, the underlying issuer or securities. A single model which diversifies general and specific risk is used. In general, a full revaluation approach is applied, while for a limited number of linear trading positions and risk factors in commodity and equity risk classes, a sensitivity-based approach is applied. The potential impact of historical market movements on today's portfolio is estimated, based on equally weighted observed market movements of the previous year (260 business days). When simulating potential movements in risk factors, depending on the risk factor type, either an absolute or a relative shift is used. The data used in the computations is updated daily. ING uses HVaR with a one-day horizon for internal risk measurement, management control, and backtesting, and HVaR with a 10-day horizon for determining regulatory capital. To compute HVaR with a 10-day horizon, the one-day risk factor shifts are scaled by the square root of 10 and then used as an input for the revaluation. The same model is used for all legal entities within ING with market risk exposure in the trading portfolio.

HVaR has some limitations: it uses historical data to forecast future price behaviour, but future price behaviour could differ substantially from past behaviour. Moreover, the use of a one-day holding period (or 10 days for regulatory capital calculations) assumes that all positions in the portfolio can be liquidated or hedged in one day. In periods of illiquidity or market events, this assumption may not hold. Also, the use of a 99 percent confidence level means that HVaR does not take into account any losses that occur beyond this confidence level.

Backtesting is a technique for the ongoing monitoring of the plausibility of the HVaR model in use. Although HVaR models estimate potential future trading results, the estimates are based on historical market data. In a backtest, the actual daily trading result (excluding fees and commissions) is compared with the one-day HVaR.

In addition to using actual results for backtesting, ING also uses hypothetical results, which exclude the effects of intraday trading, fees, and commissions. When an actual or a hypothetical loss exceeds the HVaR, an 'outlier' occurs. Based on ING's one-sided confidence level of 99 percent, an outlier is expected once in every 100 business days.

The stressed HVaR (SVaR) is intended to replicate the HVaR calculation that would be generated on the bank's current portfolio with inputs calibrated to the historical data from a continuous 12-month period of significant financial stress relevant to the bank's portfolio.

To calculate SVaR, ING uses the same model that is used for 1DHVaR, with a 10-day horizon. The data for the historical stress period used currently includes the height of the credit crisis around the fall of Lehman Brothers (2008-2009), and this choice is reviewed regularly. The historical data period is chosen so that it gives the worst scenario loss estimates for the current portfolio. The same SVaR model is used for management purposes and for regulatory purposes. The same SVaR model is used for all legal entities within ING with market risk exposure in the trading portfolio.

Stress testing is a valuable risk management tool. In addition to the bank wide stress test framework as described in the stress testing section, Trading Risk Management performs stress tests specific to the trading book with various frequencies. The trading book stress tests evaluate the impact on the bank's trading book under severe but plausible stress scenarios, using a full revaluation approach. The framework is based on historical, as well as, hypothetical scenarios. The stress result is an estimate of the profit and loss caused by a potential event and its worldwide impact for ING. The results of the stress tests are used for decision-making, aimed at maintaining a financially healthy going concern institution after a severe event occurs.

In stress scenarios, shocks are applied to prices (credit spreads, interest rates, equity, commodities, and FX rates) and volatilities. Depending on the type of stress test, additional scenario assumptions can be made, for example, on correlations, dividends, or recovery rates. The structural scenarios are defined to cover market moves in various directions and capture different asset class correlations. Scenarios are calculated using the full revaluation approach. The worst scenarios are determined for each product line, business line and super business line, and compared against limits.

The incremental risk charge (IRC) for ING is an estimate of the default and migration risks for credit products (excluding securitisations) in the trading book, over a one-year capital horizon, with a 99.9 percent confidence level. Trading positions (excluding securitisations) of ING, which are subject to specific interest rate risk included in the internal model approach for market risk regulatory capital, are in scope of the IRC model. By model choice, equity is excluded from the model. For the calculation of IRC, ING performs a Monte Carlo simulation based on a multi-factor t-copula. In the multi-factor IRC model, the supervisory asset correlations are no longer applicable, and the calibration of the correlations is based on historical market data. The rating change is simulated for all issuers over the different liquidity horizons (i.e. time required to liquidate the position or hedge all significant risks) within one year. Movements across different rating categories and probabilities of default are governed by a credit-rating transition matrix. An internal transition matrix along with internal LGDs, is used to comply with the consistency requirement. The financial impact is then determined for the simulated migration to default, or for the simulated migration to a different rating category, based on LGD or credit spread changes, respectively.

More information regarding the use of internal market risk models can be found in the Market Risk section within Risk Management section of the ING Group Annual Report 2025.

ING doesn't calculate comprehensive risk capital charge and therefore it appears as n/a in the table below.

EU MR3 - IMA values for trading portfolios		
	2025	2024
VaR (10 day 99%)		
1 Maximum value	59	73
2 Average value	41	48
3 Minimum value	29	29
4 Period end	33	47
Stressed VaR (10 day 99%)		
5 Maximum value	149	175
6 Average value	90	109
7 Minimum value	47	56
8 Period end	51	98
Incremental risk charge (99.9%)		
9 Maximum value	288	232
10 Average value	144	125
11 Minimum value	46	64
12 Period end	144	100
Comprehensive risk capital charge (99.9%)		
13 Maximum value	n/a	n/a
14 Average value	n/a	n/a
15 Minimum value	n/a	n/a
16 Period end	n/a	n/a

EU MR4. Consolidated trading VaR ING Bank

Overall, in 2025, there was 1 hypothetical P&L outlier from 05-03-2025 coming from CEM, caused by higher Euro rates (+25bps at 10Y tenor, -500k BPV) due to anticipated changes in German fiscal policy.

Interest rate risk in the banking book (IRRBB)

EU IRRBB1 - Interest rate risks of non-trading book activities

2025

Supervisory shock scenarios	Changes of the economic value of equity		Changes of the net interest income		
	Current period	Last period	Current period	Last period	
	1	Parallel up	-4,817	-4,216	439
2	Parallel down	1,003	438	-905	-846

6	Short rates down	915	793		

Table EU IRRBBA - Qualitative information on interest rate risks of non-trading book activities

<p>(a) A description of how the institution defines IRRBB for purposes of risk control and measurement.</p>	<p>Interest rate risk in the banking book (IRRBB) refers to the potential adverse impact of interest rate movements on a bank's earnings, capital position, and market value. This risk arises from positions held within the banking book and is a key component of ING's overall market risk profile.</p> <p>ING applies risk measures based on both an earnings perspective and a value perspective. The following (sub-)risk types are considered for the measurement of IRRBB: Gap Risk, Customer Behaviour Risk, Tenor Basis Risk, Vega Optionality Risk. In addition, ING measures Market Risk Economic Capital for the banking book.</p> <p>ING recognises the importance of sound market risk management and bases its market risk management framework on the need to identify, assess, control, and manage market risks. The approach consists of a cycle of five recurring activities: risk identification, risk assessment, risk control, risk monitoring and risk reporting.</p> <ul style="list-style-type: none"> >> Risk identification is a joint effort of the first and second lines of defence. Its purpose is to detect potential new/emerging risks and any changes in known risks. >> Identified risks are assessed and measured by means of various risk metrics to determine the importance of the risk to ING and subsequently to identify the control measures needed. >> Risk control measures used by ING include policies, procedures, minimum standards, limit frameworks, management buffers to cover for uncertainties, and stress tests. >> Risk monitoring ensures that the implemented risk controls are executed, complied with across the organisation, and are effective. >> Market risk management results and findings are reported to the necessary governing departments and approval bodies. 	<p>Article 448.1 (e), first paragraph</p>
<p>(b) A description of the institution's overall IRRBB management and mitigation strategies.</p>	<p>The IRRBB strategy establishes a clear link between the overarching ING business strategy to the acceptable tolerance level for IRRBB, expressed via the Risk Appetite Statements. The Risk Appetite Statements are translated into metrics and corresponding limits to enable effective allocation, implementation, and monitoring of risk limits.</p> <p>The IRRBB risk appetite is reviewed or updated at least annually and must be based on strategic objectives, identified IRRBB risks, and regulatory requirements. The limits are defined at the consolidated level across the different risk categories and cascaded down through the organisation. The Management Board Bank approves higher-level limits of ING Group while the cascading to sub-metrics and locations has been delegated to the Group Financial Risk Committee (GFRC).</p> <p>ALCO Bank discusses and steers monthly, the overall risk profile of all ING Bank's balance sheet and capital management risks. This oversight ensures alignment with the Bank's strategic priorities and adherence to regulatory thresholds (Supervisory Outlier Tests), supported by various IRRBB metrics: Net Interest Income-at-Risk, Net Present Value-at-Risk, Revaluation Reserve-at-Risk, IFRS P&L volatility, and Market Risk Economic Capital for the banking book.</p> <p>The management of interest rate risk is governed by the IRRBB framework, as approved by ALCO Bank. This framework describes roles, responsibilities, risk metrics, the policies, and procedures related to interest rate risk management. As a result of this framework, ING centralises interest rate risk management from commercial books (that capture the interest rate risks in the products sold to clients) to globally managed interest rate risk books within Group Treasury.</p> <p>The IRRBB framework uses complimentary views for the measurement of IRRBB:</p> <ul style="list-style-type: none"> >> Sensitivity view: Assess individual IRRBB risk types. The sensitivity view includes the IRRBB-specific regulatory measures as well as internal management metrics. >> Integrated view: Measures all IRRBB risk types coherently from both an earnings perspective and/or value perspective. This includes economic capital, internal stress testing and regulatory stress testing. >> Specific (for example product specific) stress testing. <p>ING implements hedging and risk mitigation strategies that range from the use of traditional market instruments, such as interest rate swaps, to more sophisticated hedging strategies to address a combination of risk factors arising at the portfolio level.</p> <p>Furthermore, ING's follows the well established three model lines of defence (MLOD) approach, providing a robust structure for managing model risk. This approach aims to provide a sound governance framework for model risk management by defining and implementing three different management layers with distinct roles and oversight responsibilities. In this structure, models used in the IRRBB domain, globally or locally, are subject to regular validations/audits by Independent Model Validation (2nd MLOD) and Corporate Audit Service (3rd MLOD).</p>	<p>Article 448.1 (f)</p>

(c)	<p>IRRBB measures: ING applies a comprehensive suite of IRRBB measures to assess the impact of interest rate movements on earnings, economic value, and capital strength. The key metrics are defined as follows:</p> <p>>> Net Interest Income-at-Risk measures the impact of changing interest rates on net interest income (before tax) of the banking book over a time horizon of one year (expanding to a horizon of three years). This excludes credit spread sensitivity and fee income. >> NII Supervisory Outlier Test is a regulatory metric that measures changes in net interest income over a one-year period under sudden parallel interest rate change scenarios, assuming a constant balance sheet. >> Net Present Value-at-Risk measures the impact of changing interest rates on value. The NPV-at-Risk is defined as the outcome of an instantaneous increase and decrease in interest rates from applying currency-specific scenarios. >> Economic Value of Equity (EVE) Supervisory Outlier Test is a regulatory metric that measures changes in the net present value of the interest rate sensitive instruments. >> Customer Behaviour Risk measures the sensitivity of NII and NPV to modelled customer behaviour by shifting the parameters of behavioural models. >> Tenor basis risk measures the sensitivity of NII and NPV to changes in the basis spread between different swap curves where the basis spreads relative to the most liquid swap curve are shifted. >> Vega optionality risk measures the impact of changes in interest rate volatilities on the NPV. >> NII FV-at-Risk measures the future fair value sensitivities of positions accounted for at FVtPL and FVtOCI in the banking book over a one-year period, extending to a three-year horizon. This measure provides insight into impact of fair market values changes on P&L and equity. Combined with the Net Interest Income-at-Risk, it forms an overall Earnings-at-Risk measure. >> From an Economic Capital perspective, IRRBB is also measured as it is covered by Market Risk EC. This is measured and reported to Capital and ALM risk Committee (CARC) on a monthly basis.</p> <p>IRRBB metrics are calculated managed and reported on a monthly for internal metrics and quarterly for regulatory metrics.</p>	Article 448.1 (e) (i) and (v); Article 448.2
(d)	<p>A description of the interest rate shock and stress scenarios that the institution uses to estimate changes in the economic value and in net interest income (if applicable).</p> <p>>> ING uses plethora of scenarios ranging from parallel, non parallel and narrative based scenarios for both NII-at-Risk and NPV-at-Risk. >> For the regulatory view, ING uses prescribed 6 regulatory scenarios (parallel and non-parallel) for EVE SOT and 2 parallel scenarios for NII SOT. >> Customer Behaviour Risk scenarios are defined and applied to portfolios exposed to embedded behavioural risk. Typically, this entails applying stress assumptions on behavioural model parameters for both assets and liabilities (e.g. prepayment rate for mortgages on asset side and pricing/volume developments on savings) >> Two scenarios (tightening and widening) are defined for Basis Risk to measure the sensitivity from both earnings (NII) and value perspective (NPV). >> For Vega Optionality, one scenario is applied for parallel increase of the normal volatility surface to measure the sensitivity of Net Present Value (NPV).</p>	Article 448.1 (e) (iii); Article 448.2
(e)	<p>A description of the key modelling and parametric assumptions different from those used for disclosure of template EU IRRBB1 (if applicable).</p> <p>For internal measurement reporting, NII-at-Risk figures are reported from the earnings perspective and NPV-at-Risk from the value perspective. For these measures the following key modelling parametric assumptions differ from the regulatory reporting measurements: >> Currency specific interest rate gradual movements (1-in-10 year scenario) are applied for NII-at-Risk while instant movements (1-in-10) are applied for NPV-at-Risk. >> Post-shock interest rate floors apply for both regulatory and internal measurements but differ in the levels of interest rate floors. >> Straight aggregation across currencies is applied to both NPV and NII measures. This approach differs from the EVE and NII SOT changes reported in IRRBB1, which adhere to the currency aggregation rules prescribed in the Regulatory Technical Standards on Supervisory Outlier Tests. >> The base case scenario for yield curve development is based on the assumption of implied forward rates. >> The NII-at-Risk figures are measured based on the assumption of the balance sheet developments in line with the dynamic plan and repricing assumptions using the business view in line with dynamic plan. >> For NII-at-Risk, it is assumed that the projections of the balance sheet development don't change under the alternative scenarios but the behavioural impact of models assumptions is taken into account. >> NII-at-Risk is defined as the outcome of a ramped (i.e. gradual) increase and decrease in interest rates versus a base scenario. >> Repricing assumptions on NII-at-Risk are based on the business view. >> Cashflows for NPV-at-Risk are based on full coupons differing from EVE metric where margins are stripped from coupon cashflows. The discounting curve of the NPV-at-Risk figures is product specific risky curve (i.e. entailing relevant spread components) of the Swap curve, FTP curve and commercial margin, while for the regulatory measurement, it is discounted at the risk-free rate.</p>	Article 448.1 (e) (ii); Article 448.2

(f)	A high-level description of how the bank hedges its IRRBB, as well as the associated accounting treatment (if applicable).	<p>ING uses derivatives for economic hedging purposes to manage its asset and liability portfolios and structural risk positions. The primary objective of ING's hedging activities is to manage the risks which arises from structural imbalances in the duration and other profiles of its assets and liabilities in accordance with its risk appetite. The main risks which are being hedged are interest rate risk and foreign currency exchange rate risk. These risks are primarily hedged with interest rate swaps, cross currency swaps and foreign exchange forwards/swaps.</p> <p>For these several hedge accounting programs are used to align the accounting with the economic hedging purposes of these swaps. ING uses fair value hedge and cash flow hedge accounting programs in relation to IRRBB.</p> <p>ING applies fair value hedge accounting on micro level in which one hedged item is hedged with one or multiple hedging instruments as well as on macro level whereby a portfolio of items is hedged with multiple hedging instruments.</p>	Article 448.1 (e) (iv); Article 448.2
(g)	A description of key modelling and parametric assumptions used for the IRRBB measures in template EU IRRBB1 (if applicable).	<p>The key modelling and parametric assumptions used, aim at:</p> <ul style="list-style-type: none"> >> Reporting Economic Value of Equity in line with the regulatory requirements. >> Modelling customer behaviour of mortgages, loans, savings, and demand deposits, is based on extensive research. Per business unit and product type, exposures are typically segmented based on expected client behaviour to obtain homogenous portfolios. For the segments, customer behaviour is determined based on historical data and expert opinion. >> Applying behavioural modelling to its non-maturity deposits that reflects the product characteristics of the deposits, such as rate-sensitivity, volume stability and depositor type. Additionally, the modelling approach distinguishes between transactional, rate-insensitive deposits (primarily current accounts), which are modelled using an rate insensitive (unconditional) cash flow approach, and non-transactional, rate-sensitive deposits (primarily savings), where the modelled cash flows depend on the interest rate scenario. >> Behavioural modelling of loan prepayments can either be rate insensitive or rate sensitive. Rate-insensitive loans (typically floating rates) use an unconditional rate insensitive (unconditional) cash flow model, while rate-sensitive loans (typically fixed rates) model cash flows that are rate sensitive (conditional on interest rates changes). Depending on the characteristics of the portfolio, additional factors such as seasonal patterns or loan age, among others may also be incorporated. >> Asset- and liability behavioural models are reviewed at least annually. >> ING applies a scenario independent spread across products for NII SOT. However, for NMDs, the margin is adjusted in line with internal measurement metric. 	Article 448.1 (c); Article 448.2
(h)	Explanation of the significance of the IRRBB measures and of their significant variations since previous disclosures	<ul style="list-style-type: none"> >> ΔEVE has shown a slight increase in absolute terms over the reporting period under the most penalizing scenario, BCBS Parallel Up, driven by an increase in duration of the investments of own funds. It remains well within internal risk appetite and regulatory boundaries. >> ΔNII has shown minor increase in absolute terms over the reporting period for the most penalizing scenario, BCBS Parallel Down, with no material driver to be highlighted. It remains well within internal risk appetite and regulatory boundaries. 	Article 448.1 (d)
(i)	Any other relevant information regarding the IRRBB measures disclosed in template EU IRRBB1 (optional)		
(1) (2)	Disclosure of the average and longest repricing maturity assigned to non-maturity deposits	<p>The behavioural modelling outcomes of non-maturity deposits are translated into replicating portfolios, representing the repricing maturities assigned to these deposits. The volume-weighted average repricing maturity of non-maturity deposits within the scope of behavioural modelling is 2.7 years and its duration of 2.5 years. It is important to note that the longest assigned repricing maturity depends on the characteristics of each individual segment. The longest assigned repricing maturity in ING Group is 15 years.</p> <p>>> ING restricts the maximum duration allowed for the modelling of non-maturing products to 5 years in line with regulatory guidance.</p>	Article 448.1 (g)

Prudent Valuation Adjustments

The fair valued instruments of ING portfolio are subject to valuation adjustments, supported by a bank-wide valuation policy framework meeting IFRS and CRR requirements. Based on IFRS rules, the fair value adjustments booked through P&L or OCI reflect the fair exit price. Additionally, based on CRR Article 105 and Article 34, the Additional Valuation Adjustment (AVA) that captures the 90% confidence prudency in the fair value is deducted from the Common Equity Tier 1 capital.

EU PV1: Prudent valuation adjustments (PVA)													
	Risk Category					Category level AVA - Valuation uncertainty		Total category level post-diversification			Total category level post-diversification		
	Equity	Interest Rates	Foreign ex- change	Credit	Commodities	Unearned cred- it spreads AVA	Investment and funding costs AVA		Of which: Total core approach in the trading book	Of which: Total core approach in the banking book		Of which: in the trading book	Of which: in the banking book
2025													
Market price uncertainty	27	20	2	104		1		97	75	23	146	41	106
Close-out cost	35	6		4	3	1		30	28	1	38	32	6
Concentrated positions	13	6	1	87				108	18	89	81	11	69
Early termination													
Model risk	18	28		17	1	45	21	131	107	24	150	124	26
Operational risk	3	2		7				13	10	2			
Future administrative costs				3				3	3		3	3	
Total Additional Valuation Adjustments (AVAs)								731	231	500	691	210	481

The difference between the total AVA and the sum of the underlying components (internal models) is the fall-back approach.

As of 31 December 2025, the total Additional Valuation Adjustments (AVAs) is €731 million (2024: €691 million). The increase is mainly driven by the increase in the concentrated positions AVA, mainly due to the new single Syndication position in Q3 and due to lower market liquidity in Q4. On a quarterly basis, the fair value adjustments and additional valuation adjustments are discussed and approved in the Global Valuation and Impairment Committee (GV&IC), who oversees the bank-wide valuation framework.

Funding and liquidity risk

Funding and liquidity risk is the risk that ING or one of its subsidiaries cannot meet its financial liabilities when they come due, at reasonable cost and promptly. ING ensures that long-term obligations are adequately met with a diversity of stable funding instruments under both normal and stressed conditions. For more information, please refer to the Risk Management paragraph of the Annual Report.

Asset encumbrance

As part of the liquidity buffer management, ING monitors the existing asset encumbrance. Encumbered assets represent the on- and off-balance sheet assets that are pledged or used as collateral for ING's liabilities. The presented numbers for encumbered and unencumbered assets are based on the CRR (Part VIII) requirements.

In 2025, the median asset encumbrance ratio for ING Group is 17.7%.

EU AE4 - Accompanying narrative information

- ING Group manages its balance sheet prudently whereby a variety of funding sources is readily available. Given this situation, the level of encumbrance of ING Group's balance sheet is relatively low.
- (a) The amounts are presented as the median of the four quarter end values of the reporting year. The median is calculated as the average of the two values in the middle of the order of four quarter end values.
- Encumbered assets on ING Group's balance sheet comprise to a large extent mortgages and other loans which are used as cover pool for covered bond programs issued by subsidiaries in the Netherlands, Belgium and Germany, as well as external securitisations and other types of collateralised deposits. Of the total encumbered assets of the Group, €71 billion are loans and advances, mostly mortgages, that serve as collateral for these type of liabilities. The cover pool assets are not considered encumbered when the securities are retained within ING Group. The issued securitisations and especially the covered bonds have over-collateralisation, meaning that the assets in the cover pool are higher than the issuance.
- (b) Furthermore, assets are encumbered as a result of the repo- and securities lending business and cash and securities collateral posted for derivative and clearing transactions in which pledging collateral is a requirement. As part of its normal securities financing and derivatives trading activities ING enters into standard master agreements such as ISDA and Global Master Repurchase Agreements (GMRA), which contain Credit Support Annexes (CSA) or other similar clauses. Under the terms of these contracts ING could be required to provide additional collateral in the event ING is downgraded by one of the established rating agencies. Refer to the paragraph Counterparty Credit Risk.

To optimise the usage of collateral between the entities of the group ING has significant intragroup encumbrance

Liquidity requirements

Liquidity risk management

ING's core liquidity strategy is to maintain a stable and diversified funding base, primarily driven by customer deposits, representing the majority of the balance sheet. ING's long-term professional funding is well diversified across maturities and currencies. The main portion of long-term professional funding is euro and US dollar denominated, which is in line with the currency composition of customer lending. Additionally, diversification is also achieved through a mix of retail deposits across multiple locations or and deposits from corporate clients. Treasury has a complementary role to ING's diversification by managing money market funding, contributing through counterparty diversification.

All liquidity management activities are governed by the Risk Appetite Framework (RAF), ensuring alignment with the bank's overall risk strategy and regulatory requirements.

The Chief Risk Officer (CRO), as a member of the Executive Board, holds the ultimate responsibility for the risk framework, including liquidity risk. Oversight is provided by the Supervisory Board's Risk Committee, which explicitly monitors liquidity and funding risks.

This governance structure is supported by the 'three lines of defence' model, ensuring independent risk control and clear segregation of responsibilities between business units, risk management, and internal audit. Together, these elements provide a robust framework for managing liquidity risk in alignment with the bank's risk appetite and regulatory requirements.

Additionally, the Risk Committee and CRO are responsible for defining the group-wide framework and risk appetite, ensuring consistency across the organisation. Within this framework, local entities such as retail banking countries and wholesale banking hubs are responsible for generating customer deposits and managing funding at the operational level. The group's Treasury function plays a pivotal role in managing the aggregate liquidity position and executing money market activities, and ensuring alignment with strategic objectives. This structure combines strong central oversight with decentralized execution, supporting stability, diversification, and compliance with regulatory liquidity requirements.

Liquidity risk is regularly reported at the highest governance levels within ING. The Risk Committee receives updates on the status of liquidity metrics, while the Audit Committee reviews assessments of the bank's liquidity position, ensuring comprehensive board-level oversight.

The liquidity coverage ratio (LCR) and the net stable funding ratio (NSFR) regulatory metrics are monitored in terms of both ING's risk appetite and normative requirements, alongside internal indicators including the customer deposit funding ratio and net core deposit growth. Taking into consideration identified risk drivers (of short-term and future liquidity and funding), ING regularly estimates its current and future liquidity adequacy and, if

deemed necessary, takes action to further improve ING's liquidity position and maintain sufficient counterbalancing capacity. A Liquidity Adequacy Statement is formulated on a regular basis to substantiate and reflect the management view on the current funding and liquidity position, as well as the potential future challenges. The Liquidity Adequacy Statement is an important part of ING's ILAAP process.

ING assesses its F&L adequacy through three lenses – stress, economic, and normative:

- Through the stress lens, ING evaluates its ability to withstand periods of prolonged F&L stress for both normative and economic requirements. Limits under idiosyncratic, market-related, combined idiosyncratic and market-related, and climate risk scenarios, which lead to customer deposit outflows, deterioration of access to funding markets, and lower liquidity value of counterbalancing capacity, are evaluated.
- Through the economic lens, ING assesses the extent to which its customers, professional counterparties, and investors are comfortable providing deposits and funding in the tenors, currencies, and instruments necessary to sustainably fund the business (intraday, short-term, and long-term) in a going-concern situation.
- Through the normative lens, ING ascertains that the bank is in a position to meet current and future domestic and host regulatory requirements.

For each lens, ING has established a related set of risk appetite statements, which define ING's risk appetite, commensurate with the principles of liquidity adequacy

The F&L risk appetite statements are translated into metrics with appropriate boundaries and instruments, which are used to regularly measure and manage ING's funding and liquidity risk. The risk appetite with respect to the stress lens aims to have sufficient counterbalancing capacity under various internally defined stress scenarios. Regarding the economic perspective, an internally defined stable funding to loans (SFTL) ratio and stable funding surplus (SFS) metric (supplemented by other metrics) is used to stimulate a diversified funding base and to prevent overreliance on professional funding. Finally, the liquidity coverage ratio (LCR) and the net stable funding ratio (NSFR) regulatory metrics are monitored in terms of both ING's risk appetite and normative requirements.

Liquidity stress testing

Funding and liquidity stress testing forms part of the overall F&L framework. It allows ING to examine the effects of exceptional, but plausible future events on ING's funding and liquidity position, and provide insight into which entities, business lines, or portfolios are vulnerable to which types of risk drivers or scenarios.

Liquidity stress testing is a core component of ING's liquidity risk management framework. ING continuously assesses its liquidity position under stress conditions using various scenarios and time horizons, and monitors the outcomes against the RAS limits in risk committees at both local and group levels. In addition to routine monitoring, stress testing is used for ad-hoc analyses on developing situations (e.g. the U.S. Import Tariffs) and as input for various other processes, including Recovery and Resolution planning. Stress testing enables ING to identify poten-

tial F&L vulnerabilities and supports ING's steering of the liquidity position to ensure resilience against crisis situations.

The stress-testing framework encompasses the funding and liquidity risks of the consolidated balance sheet of ING Group, including all entities, business lines, as well as on- and off-balance sheet positions. The net liquidity position (NLP) is the main stress-testing measure and is measured at different time buckets.

The stress-testing framework considers idiosyncratic, market-wide, combined (idiosyncratic and market-wide), climate-stress scenarios, and the framework can be extended to additional ad-hoc scenarios. For example, it can be used as input for firm-wide stress testing and reverse stress testing.

Contingency funding planning

ING's Contingency Capital and Funding Plan (CCFP) sets out the procedure and actions to be taken to address capital and liquidity shortfalls under stressed conditions or contingent events, which might result in intensified monitoring and in the execution of mitigating measures to ensure that ING meet the institution's commitments, with minimal costs and disruption.

The objectives of the CCFP include:

- Establishment of a monitoring framework to detect approaching contingent events as well as their impact on ING's F&L position;
- Provision of a plan for responding to various and increasing levels of a bank's liquidity and capital shortfall under adverse and stressed conditions;
- Designation of management responsibilities, crisis communication methods and channels, and reporting requirements;
- Identification of contingent capital and liquidity sources under escalating adverse and stressed conditions; and
- Description of the steps needed to ensure the bank's capital and liquidity sources are sufficient to fund scheduled operating requirements and meet the institution's commitments, with minimal costs and disruption.

EU LIQB on qualitative information on LCR, which complements template EU LIQ1.

(a)	Explanations on the main drivers of LCR results and the evolution of the contribution of inputs to the LCR's calculation over time	ING Group's consolidated LCR ratio, based on a 12-month rolling average, was 140% in 4Q25, stable compared to 3Q25 of 140%.
(b)	Explanations on the changes in the LCR over time	ING Group has maintained the consolidated Group LCR above regulatory requirements as well as internal risk appetite and target steering levels. The consolidated Group LCR remained at a stable level throughout 2025 despite ongoing uncertainty in the geopolitical and macroeconomic environments.
(c)	Explanations on the actual concentration of funding sources	ING Group maintains a well-diversified and stable funding and liquidity base in order to fund commercial activities under both normal and stressed market circumstances across the bank's various geographies, currencies, and tenors. ING Group has funding mix limits in place which have been established by risk management and are managed by Group Treasury. Funding mix developments are monitored monthly by ALCO Bank. The largest funding sources in 4Q25 were deposits from private individuals, corporate and business deposits, and long-term senior debt. A significant share of the deposit funding base is covered by the Deposit Guarantee Scheme (DGS) and is considered to be a source of stable funding for ING Group.
(d)	High-level description of the composition of the institution's liquidity buffer.	94% of the liquidity buffer consists of Level 1 items, of which approximately 23% are withdrawable central bank reserves. 53% of Level 1 items are central government and central bank assets.
(e)	Derivative exposures and potential collateral calls	<p>ING employs a Collateral Funding framework, where expected Collateral exposures are long-term funded via the Matched Funding framework. The expected collateral exposures are generated using risk-neutral, market-implied information, and the resulting profiles are rebalanced on a monthly basis.</p> <p>ING covers potential collateral calls in two ways:</p> <ol style="list-style-type: none"> 1. Derivatives Funding Framework: expected collateral exposures are long-term funded via the Matched Funding framework. The expected collateral exposures are generated using a statistical model, and the resulting profiles are rebalanced monthly. 2. HLBA (Historic Look-Back Approach): Potential collateral calls, from market developments, are taken into account in the LCR via a 24-month look-back approach.
(f)	Currency mismatch in the LCR	ING steers and reports LCR above 100% for both ALL-CCY and USD, in line with the Funding & Liquidity Risk Appetite Statement and regulatory requirements. ING also reports LCR to the regulator in EUR, RON, and HUF. ING monitors LCR per currency and manages any liquidity gap in significant currency positions. This strategy has been implemented to mitigate the risks of ING towards any unexpected currency mismatches.
(g)	Other items in the LCR calculation that are not captured in the LCR disclosure template but that the institution considers relevant for its liquidity profile	The LCR disclosure template presents the consolidated LCR for ING Group. ING Group also manages and reports LCR for subsidiaries, material currencies, foreign currencies of significant branches (RON and HUF) and for the liquidity subgroups.

Environmental social and governance risk

Environmental Risk

Sustainability and Strategic Context

At ING, sustainability is a core pillar of our business strategy. We recognise that resilience and long-term business success depend on managing the growing risks of global warming and nature degradation. At the same time, we support our clients in remaining resilient and successful, as their strength reinforces ours.

ESG Risk Framework and Governance

The environmental, social and governance (ESG) risk framework provides a definition of ESG risk, the governance structure supporting the management of ESG risk, and an overview of the various roles and responsibilities related to ESG risk. The framework assists in managing ESG risk effectively through the application of the risk management process at various levels of the organisation. The framework integrates governance components, including the three lines of defence, defined organisational responsibilities, and ESG oversight bodies, and is underpinned by a continuous ESG Risk Management Cycle encompassing identification, assessment, mitigation, reporting, and monitoring, as described in detail below.

The ESG Risk Framework is supported by the double materiality assessment (DMA) and the ESG Risk Policy, which are designed to ensure the implementation of obligations, processes, and control requirements from the framework.

The ESG Risk Policy explains how ING identifies, assesses, mitigates, monitors, and reports ESG-related risks in line with our risk appetite, by considering applicable and material risks and negative impacts across the value chain. It applies to ING Groep N.V. and all majority-owned entities, unless local laws require deviations. The policy considers relevant legislation and guidance, including EBA ITS on Pillar 3 ESG disclosures, CSRD, EU Taxonomy, SFDR, and EBA Guidelines on ESG Risk Management. It sets objectives, references applicable regulations, and outlines high-level obligations and control objectives for managing ESG risks across the value chain. The ESG Risk Department oversees implementation and compliance.

ESG risks influence financial and non-financial risk types. Therefore, ESG risk management is embedded in existing processes such as credit granting, risk appetite management, and credit risk management. Local entities adapt global requirements to local regulations and practices, mainly through lending criteria, loan-management systems, and sales procedures

Integration into Existing Risk Management Processes

ESG risk management is embedded in ING's existing processes, including credit granting, risk appetite management, and credit risk management. ING applies differentiated approaches in business lines where climate change represents a material financial risk.

Climate Risk Management in Residential Mortgages

ING integrates transition and physical climate risks into its mortgage portfolio strategy, risk appetite, lending criteria, and collateral valuation. Local entities apply the ESG Risk Policy using global guidance, adapting to local regulations and practices. Key actions include:

- Customer engagement: Advisory services and duty-of-care procedures to facilitate our customers to realise low-emission buildings.
- Data collection: ING implemented controls that are designed to ensure the mandatory collection of EPC data for new loans and remediation of existing portfolios through proxy models.
- Risk appetite: Aligned with business strategy and metrics for managing low-quality EPCs at origination are monitored under the Risk Appetite Framework, with escalation to the ESG Risk Committee when needed.
- Credit acceptance process: Climate risk is considered in the credit risk assessment of our clients as it may pose a financial risk. Lending criteria require mandatory credit risk mitigations, such as insurance or alternative measures. These include collecting additional data during underwriting to demonstrate risk adaptation. For commercial and residential real estate, material hazards by jurisdiction must be reflected in the property's market value.

Business Banking Lending

ING sets decarbonisation goals for certain sectors with significant negative impact and supports these through dedicated lending criteria, data controls (e.g., EPC data for real estate), and regular monitoring. We engage with clients to support them in increasing energy efficiency of their buildings and mitigating high energy costs.

In line with our risk appetite, we accept certain transition risks but monitor and manage them through client-specific assessments, exposure limits, and key risk indicators (KRIs). Risks outside our appetite must be mitigated or may not be accepted. Mitigation measures include insurance for physical risks, covenants requiring sustainabil-

ity investments, and incorporating climate risks into collateral valuation. Sector-specific lending policies and data collection enable accurate portfolio assessment and active management.

Wholesale Banking Lending

While our decarbonization actions target the carbon-intensive sectors, we manage climate-related risks across the entire Wholesale Banking portfolio through the ESG Risk Framework, lending policies, and due diligence processes. These efforts are supported by quantification methodologies and advanced tools, ensuring that risks are identified, assessed, and managed if they present a financial risk throughout the full origination-to-monitoring cycle.

Key actions include:

- **Climate Risk Assessments:** Our focus is on climate matters that pose a material financial risk to ING, such as the risk of stranded assets, revenue instability, declining demand, regulatory uncertainty, litigation risk or uninsurable areas or assets due to extreme weather events, among other matters. We also use a holistic, longer-range financial risk horizon in terms of managing our lending portfolio, resulting in an emphasis on sustainability and continued through-the-cycle growth. Consistent with our approach across all sectors, the climate risk assessments of a client or prospective client is factored into a broader credit and financial risk assessment by the Credit Risk department. The climate risk assessment is part of a broad risk identification process and helps determine the level of due diligence that may be needed or highlights financial risks that may require further investigation. It is one of many indicators that may be considered during the credit risk assessment. The overall ESG risk assessment is applied to clients individually and objectively, on the basis of financial and credit-risk analysis.
- **Climate Risk Appetite:** Selected risk appetite statements, which are targeted at managing exposure to inherently high-climate-risk assets and clients, covering long-term structural shifts through transition, physical & nature risks.
- **Lending policies:** Sector lending policies reference the ESG Risk Policy and apply its minimum requirements. They include ESG factors and transmission channels relevant to each sector, detailing acceptable mitigants to address potential financial risks from ESG factors.
- **Client engagement and data infrastructure:** We engage clients to help them improve climate performance and continuously enhance ESG data infrastructure by integrating internal and external sources. This provides granular insights for portfolio management and supports data-driven solutions.
- **Collateral valuation:** Climate risks affecting property values are embedded in valuation, monitoring, and revaluation processes for commercial real estate.

Measurement methodologies

ING measures its exposure to ESG risks by assessing risks through risk quantification methodologies and tools. The methodologies take into account qualitative and quantitative criteria, different time horizons, and scenario analy-

sis and stress testing, supporting an assessment of the organisation's resiliency under various climate and ESG-related conditions. Quantification leverages on top-down and bottom-up approaches when applicable.

Physical risk tool: ING has developed a tool to measure and assign a level of physical risk for four chronic and nine acute physical risks across the short, medium, and long term for portfolios and geographies in which ING operates. The tool assesses the exposure of assets to physical risks under an adverse scenario in the long term before any form of mitigation. This range of hazards is recognised under EU Taxonomy. The thorough selection of hazards means this tool caters for broad, continent-spanning risks as well as local and nuanced ones. The tool has been developed using physical risk maps obtained and recognised by academically reputable sources.

The Transition risk scorecard is used by ING to quantify transition risk with a scorecard approach at client level. Methodology helps to identify the pool of high-risk clients within specific sectors, in order to subsequently manage these high-risk subsegments, taking into account ING's public commitments and sector-specific climate strategies (Terra approach). This pool of high-risk clients is subsequently managed via the climate risk-appetite setting.

ESG risk-assessment tool: For WB, ING has developed an ESG risk-assessment approach which considers the (climate and) environmental, social and governance risk factors, negative impacts and dependencies of our WB customers, and fully integrates the previous ESR framework, which is now embedded under the umbrella of the new ESG Risk Framework. Tooling was developed to support the implementation of the assessment approach in the credit granting process. Depending on the ESG risk-assessment outcome and the impact on financial risks, additional mitigation might be required and factored in as one factor for the broader credit risk assessment.

Climate Stress Test and Resilience Analyses: ING continues to enhance its climate stress-testing methodology to assess the impact of climate risks on corporate and mortgage exposures from a credit risk perspective under different climate scenarios. The methodology for short/medium-term stress test (referred to as Climate Stress Test or CST) builds on existing stress test methodology (e.g., ICAAP, EBA), while a dedicated long-term methodology has been developed (referred to as Climate Resilience Analysis or CRA) to assess the impact on provisions under various scenarios and portfolio assumptions.

For both CST and CRA, dedicated climate scenarios are used, developed using NGFS short-term and long-term (Phase V) scenario publications as foundational inputs. These scenarios cover different narratives and explore the impact of 1) a baseline/continuation of current policies scenario, 2) a Net-Zero smooth transition scenario, 3) a delayed and abrupt transition scenario, 4) a low transition risk but high physical risk scenario. These scenarios influence macro-economic variables projections (e.g. GDP, unemployment rate, house prices, etc.), which, in turn, determine the forecast of the main credit risk parameters (e.g. risk migrations, PDs, LGDs, etc.). This is referred to as the "macro" transmission channel.

In addition, dedicated climate overlays are incorporated to account for the impact of transition, physical and nature risk on a more granular level. This is referred to as the "micro" transmission channel.

For mortgages, transition risk is modelled by estimating the relationship between household income and probability of default (PD), factoring in rising carbon prices, energy costs, and renovation expenses required for low-energy label properties. A PD multiplier is then derived per portfolio, per energy performance certificate (EPC) levels. Physical risk is assessed using ING's in-house Physical Risk Tool, which combines hazard maps and property-level exposure data to estimate expected losses. LGD is adjusted based on modelled damage functions and loss estimates of material Physical Risk.

For corporates, the dedicated overlays are implemented in the form of PD multipliers across 16 NACE sectors. These multipliers are derived using ING's EEST (Environmental Elasticity Scenario Tool), which assesses the impact of transition, physical and nature risk shocks on the market price and volume per sector, and subsequently the impact of these shocks on the counterparty's financial position. The resulting financial stress is then reflected in stressed PDs.

The long-term analysis informs the resilience of the bank's business model. Climate and environmental-related risk drivers have an impact on long-term credit quality and income. Thus, our focus is on managing underlying risks by increasing risk management intensity with ING's proactive portfolio management, sector-specific transition engagement, and transaction-level risk-management measures, collectively enhancing the bank's capacity to navigate increasing climate pressures and preserve its business resilience over time.

Climate and Environmental risks impact

Credit risk

- **Climate transition risk**

ING has credit exposure to clients whose business models might not align with the transition to an environmentally sustainable economy. As a result, these clients might face a higher risk of business disruption and reduced earnings, which may impair their ability to repay loans or meet other financial obligations. Collateral depreciation is also possible in adverse climate conditions.

- **Climate physical risk**

Climate-related physical impacts can lead to significant losses, unexpected expenses, and reduced income and profits for borrowers. This may impair their ability to repay loans, thereby increasing credit risk for ING. Additionally, the frequency and intensity of extreme events can affect the value of real estate or other collateral, altering the relationship between the loan and the asset's value.

- **Biodiversity and ecosystems (impact on species)**

The negative impact on biodiversity, which can result in a demise in natural resources, can disrupt clients' operations, leading to financial losses.

Financial losses can also occur due to reputational damage. This may leave them unable to repay loans or meet their obligations on other financial transactions at the same time as reducing the value of the business.

- **Compliance risk**

Climate transition risk: Assuming that regulation in Europe will continue to increase in the coming years and decades, the inherent risk may rise accordingly. These risks are expected to become more pronounced in the medium and long term, driven by increased regulatory expectations and stronger embedding in the prudential framework. Biodiversity and ecosystems: compliance risk due to increasing expectations on the integration of biodiversity and ecosystems into European regulation and the prudential framework.

- **Business and strategy risk**

Climate transition risk: High transition risk may materialise if ING's clients are unable to adapt their business models in line with climate regulation or changing market requirements. In such cases, increasing carbon costs, regulatory restrictions, or declining market demand can weaken clients' profitability and balance-sheet strength. This may translate into reduced lending opportunities, ultimately affecting future income generation.

Failing to meet commitments made can result in a loss of trust among ING's customers and stakeholders, resulting in customers choosing to take their business elsewhere. ING may therefore face increased costs related to customer acquisition and retention efforts, ultimately affecting profitability.

Sustainable Finance Opportunities

To support our Wholesale Banking clients in their sustainable transition, we tailor our offerings across lending, debt and capital advisory, transaction services, and financial markets to meet individual needs and sustainability goals. This approach enables us to accelerate sustainable business practices, including the energy transition.

We also see opportunities in financing energy transition to build a more sustainable future, and support our broader transition goals. With this in mind, we tripled our target for financing renewable power generation up to €7.5 billion annually by 2025, from the target of €2.5 billion set in 2022.

Retail Banking has significant opportunities to support the transition to a low-carbon economy through green mortgages. For private individuals, by offering preferential pricing and mortgage extensions for properties with better EPC ratings, we can attract customers seeking energy-efficient homes and differentiate our offering in a growing market segment. Moreover, we can create opportunities by financing renovations that improve energy performance, such as insulation upgrades or installing solar panels, enabling customers to enhance property value and reduce emissions. This not only supports environmental goals but also strengthens borrowers' financial resilience, as energy-efficient homes typically have lower energy bills, contributing to a more robust credit profile.

Similarly, Business Banking lending presents opportunities to support clients in their transition through sustainable finance products. Loans used to fund low-carbon investments, such as renewable energy or energy efficiency,

enable businesses to transition to more sustainable operations, positioning ING as a trusted partner in their decarbonisation journey.

Treasury

Our Global Green Funding Framework promotes opportunities for ING, its investors, and clients to support a low-carbon economy on both sides of the balance sheet. On the asset side, we finance green buildings and renewable energy portfolios to drive the transition to a low-carbon economy. On the liability side, we issue green bonds and other funding instruments to attract investors and clients who prioritise sustainability in their investment decisions and diversify funding sources. To ensure transparency and accountability, we publish an annual Allocation Report and Impact Report, demonstrating how bond proceeds are exclusively allocated to green projects and the impact achieved. These reports are published on [ing.com](https://www.ing.com).

Social Risk

Social risks refer to any negative financial and/or non-financial impact due to current or future social factors impacting society, employees, customers, and stakeholders. To ensure these risks are consistently identified and assessed, ING applies a set of methodologies and tools, which include qualitative and quantitative criteria, and different time horizons. These include the Double Materiality Assessment, ESG risk classification methodologies, ING's taxonomy of social factors, and risk assessment & mitigation instruments such as the ESG risk assessment, the Equator Principles for project-level assessments, and customer- and workforce-related mechanisms supporting the identification of social risks which might cause a financial risk for ING. Through this structure, ING ensures that social risks are identified, assessed and managed consistently and in alignment with regulatory requirements.

ING identifies, measures and monitors activities and exposures sensitive to social risk through the ESG Risk Framework. Identification begins with the Double Materiality Assessment and ING's ESG taxonomy of social factors, which help determine relevant social impacts, dependencies and transmission channels across value-chain segments. ING applies ESG risk classification methodologies that use qualitative and quantitative criteria and multiple time horizons to assess the materiality of social risks at the client, portfolio and value-chain level.

ING uses the ESG risk assessment to assess the financial impact of social risks. Consistent with our approach across all sectors, the social risk assessments of a client or prospective client is factored into a broader credit and financial risk assessment by the Credit Risk department.

ING's Customer Centricity Policy (CCP) supports the prevention and mitigation of risks related to social inclusion, access to quality information, mis-selling, unfair customer treatment and accessibility.

For ING's own operations, workforce surveys and whistleblower policies ensure prevention and mitigation of discrimination, violence and harassment.

Monitoring is carried out through key risk indicators and regular reviews under the ESG Risk Dashboard.

Through this integrated structure, ING ensures ongoing oversight of activities and exposures sensitive to social risk.

ESG Risk Framework

Social factors can lead to negative financial and non-financial impacts through a variety of risk linkages known as transmission channels. A transmission channel describes the causal chain through which ESG risks impact an institution's financial and non-financial risk profile. In the case of social risks, issues such as changes in social policy, workforce or customer health and safety, impacts on affected communities, shifts in market sentiment, economic inequality, or the social exclusion of consumers can transmit into financial risks through mechanisms including

negative customer and investor preference, legal liability for damages, or negative impacts on the workforce. These channels can ultimately contribute to credit-related pressures, supply-chain disruptions, damages and disruptions to operations, deviations from expected income or costs, and heightened litigation risks.

To manage these risks, ING has in place the ESG Risk Framework, which outlines ING's approach to managing ESG risk through the application of the risk management process at various levels of the organisation. The Framework sets out governance, roles and responsibilities, and the processes used to identify, assess, mitigate and monitor ESG risks, ensuring that ESG risk is embedded within all material risk categories across the three lines of defence. It also provides oversight, methodologies, and mandatory instructions that guide risk functions and business units in incorporating ESG-related risk aspects into their activities, thereby supporting consistent and effective management of ESG risks across ING's full value chain.

As part of its approach to managing social risks, ING also maintains policies and procedures that guide its engagement with counterparties on their management of social risks. In line with the ESG Risk Framework, ING undertakes engagement with counterparties to understand and support the level of mitigation, ensuring that socially related risk drivers are addressed where they may pose material financial impacts. .

In addition, the ESG Risk Framework incorporates mechanisms for setting and monitoring ESG-related risk appetites. As part of the broader Risk Appetite Framework, ING embeds material ESG risk into the Risk Appetite Statement, expressing the type and level of ESG risk it is willing to tolerate and ensuring that "exposures moving beyond the tolerance risk levels are identified and proactively acted upon." This limit-setting process is supported by regular monitoring of ESG-related key risk indicators and breaches through the ESG Risk Dashboard. Furthermore, the Framework assigns the second line of defence oversight, challenge, and "escalation/veto power in relation to activities and decisions that are judged to present unacceptable risks to ING," enabling timely escalation where social-related ESG risks exceed acceptable thresholds. Through these measures, ING ensures that social risks are systematically constrained within defined boundaries and that any breaches of risk tolerance are promptly identified and addressed.

Governance Structure

ING's governance of social risk is embedded within its broader risk management structure, overseen at multiple organisational levels. The Supervisory Board's ESG Committee monitors ESG-related matters—including social topics—and advises on trends, disclosures and ING's overall strategic response. The Executive Board and Management Board Banking integrate ESG, including social impacts, risks and opportunities, into day-to-day management and long-term strategic decision making, ensuring that social risk considerations are reflected across the business. The ESG Risk Committee provides technical oversight and supports the implementation of ESG risk-related matters raised by the Supervisory Board, acting as a cross-functional forum that aligns risk and business functions. Management of specific social risks—such as those affecting the workforce or customers—is further supported by

dedicated governance processes, including HR, Compliance, and customer protection mechanisms, all of which feed into ING's established risk management and internal control framework.

This enterprise-level governance framework is complemented by more granular structures that manage social risk topics within ING's own workforce. Global HR oversees engagement with employees, supported by Group Compliance for topics such as harassment. ING conducts regular workforce surveys, such as the Organisational Health Index and Employee Index, to capture insights on working conditions and employee experience, and maintains internal policies to mitigate discrimination, misconduct, and other social risk exposures. ING further embeds international human rights expectations by applying stricter requirements in countries where local legislation exceeds the Universal Declaration of Human Rights and ILO Core Conventions, and by aligning internal policies with the UN Guiding Principles on Business and Human Rights. A level governance framework is complemented by more granular structures that manage social-risk topics within ING's own workforce.

Own workforce strategy - Unlocking our people's full potential

As a globally operating bank, we are continuously navigating the complexities of global and local regulations. In some instances, we set general, globally applicable policies to help address the material risks and material negative impacts our workforce may face, with consideration for local laws and regulations, which may necessitate tailored local policies to ensure full compliance. ING maintains workforce-related policies designed to mitigate discrimination, misconduct and other workforce-related risks.

At ING, we denounce all forms of discrimination. Our global policy, global strategy and various DIB action plans are aimed at preventing discrimination and driving inclusion. Discrimination includes any distinction, exclusion or preference made on the basis of age, sex, gender identity or expression, gender reassignment, sexual orientation, family responsibility (including pregnancy, maternity, paternity, and adoption), partnership status, cultural background, religion, race, ethnicity, physical or mental disability, nationality, political opinion, social origin, or any other status, that has the effect of nullifying or impairing equal opportunity or treatment in employment. Any distinction, exclusion, or preference not based on the inherent requirements of the job is deemed as discrimination.

Violence, Harassment, and Whistleblowing

Risks and negative impacts related to violence and harassment are addressed through ING's Whistleblower Policy, which sets out confidential "speak-up" channels (to managers, HR, confidential advisers, Whistleblower Reporting Officers, or the anonymous whistleblower platform) and requires that concerns be handled fairly, timely, proportionately and with care. Robust anti-retaliation safeguards apply, and protections are extended to anyone that raises or assists with a concern. All reported concerns are categorised, monitored and reported quarterly by the Group Chief Compliance Officer to the Supervisory Board Risk Committee, with handling aligned to the Global Investigations Charter.

Whistleblower concerns are linked to internationally recognised human rights, and the severity of human-rights-related issues is assessed using scale, scope and remediability of impact. To strengthen effectiveness, ING provides mandatory training on the whistleblower channel (covering anonymity, confidentiality, rights, responsibilities and follow-up), actively monitors completion, and supplements this with a specialist learning journey for Reporting Officers. Local policy annexes are used where national transpositions of the EU Whistleblowing Directive require additional provisions.

Harassment- and violence-related concerns are tracked among defined whistleblower categories (aggression and violence, bullying, harassment, sexual harassment), enabling structured analysis and governance reporting. In 2025, ING recorded 275 total concerns raised by its workforce across categories, with quarterly reporting to the Supervisory Board and severity assessment applied to determine whether issues qualify as severe human-rights incidents.

Customer Centricity and Fair Treatment

ING's Customer Centricity Policy (CCP) supports the prevention and mitigation of risks related to social inclusion, access to quality information, mis-selling, and unfair customer treatment. The policy defines high-level obligations to ensure products and services are suitable, fairly priced, and aligned with customer needs throughout the relationship lifecycle.

Customer centricity is embedded through internal controls and processes, including the Product Review and Approval Process (PARP). A global CCP enables consistent application across all products and customer segments. Complaint channels are also used to gain insight into customer impacts and drive structural improvements.

Governance Risk

Supervisory Board and ESG Oversight

The ESG Committee assists the Supervisory Board (SB) on ESG-related matters, including the development of ESG and its integration into ING's strategy, as well as ESG-related disclosures, reporting, and assurance (the latter together with the Audit Committee). The Committee also monitors and advises on relevant ESG trends, developments, and potential impediments, and how these connect to ING's actions, targets, and responses, based on the ESG dashboard.

Management Board Engagement

ESG is a regular agenda item for ING's management boards, the Executive Board (EB) and the Management Board Banking (MBB), reflecting their responsibility for day-to-day management and ING's long-term (ESG) strategy. ESG-related impacts, risks, and opportunities, and their implications for strategy, are embedded across a wide range of discussions within both boards.

ESG Risk Governance

The ESG Risk Committee (ERC) oversees the implementation and delivery of ESG risk-related matters raised by the Supervisory Board or its committees. Within its mandate, the ERC acts as a technical adviser, sets ESG risk priorities, serves as a planning body, and advises on the approval of all material ESG risk-related items.

The Disclosure Committee supports the Boards in fulfilling their responsibilities regarding ING's disclosure obligations and related activities.

Sustainability Governance in Wholesale Banking

The Wholesale Banking Sustainability Steering Committee assigns ownership, accountability, and resources within Wholesale Banking (WB) and relevant support functions to set and implement WB's sustainability commitments. The committee steers ESG key performance indicators within WB and defines the WB sustainability strategy, including sector targets and associated sector-based transition plans.

Sustainability Governance in Retail Banking

For Retail Banking, including Private Individuals, Business Banking, and Private Banking, the development of sustainable products and progress of lending portfolios toward climate goals are steered by the respective business heads in the Retail countries. Strategic ESG development and roadmaps are endorsed and monitored through councils such as the Net Zero Housing Council, Financial Health Council, and Sustainable Finance Business Banking Council. Sustainability leads in local entities maintain a functional reporting line to the global head of Sustainability to strengthen alignment between global and local activities.

Anti-Bribery and Corruption

ING applies a zero-tolerance approach to bribery and corruption in all business relationships. Accepting or paying bribes, offering improper inducements, or any actions perceived as such are not permitted, and the same standards are expected of business partners and third parties. Investigations into potential breaches are handled independently by CSI. All ING entities are required to report bribery and corruption incidents in line with the Global Event Management Procedure, including reporting to the MBB and the Chair of the Supervisory Board.

Climate Risk and Credit Risk Assessment

Climate risk assessments for clients and prospective clients are incorporated into broader credit and financial risk assessments conducted by the Credit Risk department. These assessments form part of the overall risk identification process and help determine the required level of due diligence or highlight financial risks requiring further investigation.

Whistleblowing and Human Rights Categories

In line with the Whistleblower Policy and related control standards, all reported concerns are categorised and monitored. Whistleblower concerns are grouped into human-rights-related categories, including discrimination; aggression, violence, and bullying; breaches of confidentiality and data privacy related to employees; (sexual) harassment; work pressure or unrealistic targets; and retaliation.

ESG Risk Framework

ING considers the governance performance of its counterparties as part of its external-focus governance risk definition, which requires identifying and evaluating governance factors that may affect the financial performance or solvency of clients or third-party contractual partners. In this framework, counterparty governance is treated as one of the ESG risk drivers that the first line is responsible for assessing, while the second line provides oversight and challenge within the broader ESG Risk Framework. Further details on the underlying methodology are provided in the Environmental and Social sections of this report.

Climate change Transition risk

Transition risks refer to any negative financial and/or non-financial impact due to the effect of the transition to a net-zero and more environmentally sustainable economy. The transition includes:

- Climate and environment-related policy changes.
 - Technological changes.
 - Market sentiment and demand changes.

Templates 1, 2, 3, 4 and 5, as disclosed hereunder are providing information on indicators of potential climate change transition risk of the banking book of ING.

Credit quality of exposures

The purpose of Template 1 of the Pillar 3 ESG ITS is to show information on those assets prone to risks related to the transition to a low-carbon and climate-resilient economy, i.e. transition risk. In particular, institutions must disclose information on their exposures towards non-financial corporations that operate in sectors that contribute highly to climate change and in carbon-related sectors, and on the quality of those exposures, including credit quality information on non-performing exposures, stage 2 exposures and related impairments and provisions.

In particular, institutions must disclose in this template information on the gross carrying amount of loans and advances, debt securities and equity instruments provided to non-financial corporates, other than those included in the held-for-trading or held-for-sale portfolios, classified by NACE economic sector. The sectors have been determined by EBA as those highly contributing to climate change.

In addition, institutions must provide in column b of the template a further breakdown of exposures towards companies excluded from EU Paris-aligned Benchmarks. In column 'b', ING used data acquired from an external data provider (Bloomberg) for the data on companies considered to do significant harm to environmental objectives (Article 12.2). ING's exposure towards companies excluded from the Paris-aligned benchmark has decreased compared to YE 2024 for the sectors that highly contribute to climate change.

The greenhouse gas (GHG) financed emissions (scope 1, 2, and 3) have been incorporated in columns i, j and k. For the calculations, we use an external data provider (CDP) to estimate our loan book emissions. ING discloses scope 3 emissions for both upstream and downstream, covering our whole footprint of the value chain. ING calculates absolute financed emissions using the PCAF's Global GHG Accounting and Reporting Standard for the Financial Industry.

ING makes use of the PCAF Data Quality Scores (1 to 5) to assess the accuracy of our emissions estimates. As per the PCAF standard, data quality score 1 and 2 relate to high-quality data coming from a company's disclosure or actual asset-level data. Score 3 relates to medium-quality using estimates based on physical data, whereas data quality 4 and 5 relate to low-quality data, i.e. based on revenue or sector average proxies. At ING, we are continuously working on improving our data to be able to have the highest quality emissions estimates on all asset classes. More information on the PCAF scores is in the Sustainability Statement part of the Annual Report 2025.

For the maturity buckets, the following assumptions have been used:

- Where the amount is repaid in installments, the exposure shall be allocated in the maturity bucket corresponding to the last installment (in line with ITS Annex II instructions).
- Where the amount is on demand, such as interbank loans, the exposure shall be allocated in the shortest maturity bucket "< 5 years".
- Where an exposure has no stated maturity for reasons other than the counterparty having the choice of the repayment date, or in the case of equity holdings, the amount of this exposure shall be disclosed in the largest maturity bucket "> 20 years" in line with ITS Annex II instructions.

Lastly, column 'Of which environmentally sustainable (CCM)' (column c) shows the portion of the exposure per NACE sector that contributes to climate change mitigation in alignment with the EU Taxonomy (EUT). However, following the no action letter from EBA, this column has been suspended until the end of 2026.

Template 1: Banking book- Climate Change transition risk: Credit quality of exposures by sector, emissions and residual maturity

Sector/subsector	Gross carrying amount (mln €)				Accumulated impairment, accumulated negative changes in fair value due to credit risk and provisions (Mln €)			GHG financed emissions (scope 1, scope 2 and scope 3 emissions of the counterparty) (in tons of CO2 equivalent)		GHG emissions (column i): gross carrying amount percentage of the portfolio derived from company-specific reporting	<= 5 years	> 5 year <= 10 years	> 10 year <= 20 years	> 20 years	Average weighted maturity
	Of which exposures towards companies excluded from EU Paris-aligned Benchmarks in accordance with points (d) to (g) of Article 12.1 and in accordance with Article 12.2 of Climate Benchmark Standards Regulation	Of which environmentally sustainable (CCM)	Of which stage 2 exposures	Of which non-performing exposures **	Of which Stage 2 exposures	Of which non-performing exposures	Of which Scope 3 financed emissions

* In accordance with the Commission delegated regulation EU) 2020/1818 supplementing regulation (EU) 2016/1011 as regards minimum standards for EU Climate Transition Benchmarks and EU Paris-aligned Benchmarks -Climate Benchmark Standards Regulation - Recital 6: Sectors listed in Sections A to H and Section L of Annex I to Regulation (EC) No 1893/2006

** Of which non-performing exposures is excluding POCI (purchased originated credit impaired).

*** Sector K has been included in accordance with EBA Q&A 2022_6600 (the amount is aligned with finrep including reverse repurchase loans).

Loans collateralised by immovable property collateral – Energy efficiency of the collateral

Template 2 of the Pillar 3 ESG ITS shows the gross carrying amount of loans collateralised with immovable property and of repossessed real estate collaterals with a breakdown by EPC label of the collateral.

The information on the level of energy efficiency of the collaterals is key to determine the climate change transition risk faced by these exposures.

The template consists of two main sections:

- Level of energy efficiency based on Energy Performance in kWh/m² of the collateral. Immovable properties non-eligible for EPC are not in scope; and
- Level of energy efficiency based on EPC labels of the collateral. Only collateral that could have an EPC label that meet the Energy Performance of Buildings Directive are reported in this section. For instance, a (piece of) land might be given as collateral but is not eligible for EPC.

In line with the ITS instructions, the Energy Performance in kWh/m² is determined based on the EPC label or estimated in the absence of the EPC label. The extent to which this data is estimated and not based on EPC labels is visible in row 5 for EU area and row 10 for non-EU area. Data quality improvement projects are ongoing locally on EPC labels and Energy Performance data availability, as well as the development of new EP proxy models to estimate the energy efficiency score where not available. All EP estimations are carried out by the local units.

In countries where EPC labels are issued with a higher level than A, these have been included in the column A. Same, in countries where EPC labels are present that are lower than G, these have been added to the column G. On the collected labels, only valid labels have been considered, meaning labels that have been issued by the authorized authority and not older than 10 years.

The increase in EPC labels availability in EU countries from € 87.6 billion in December 2024 to € 126.3 billion in December 2025 is explained by our continuous efforts to increase data availability.

Alignment metrics

The sectors (columns a and b) represent the NACE codes that cover the most carbon-intensive parts of the value chain and the exposure in these sectors (column c). The sectors in this template are managed under ING's Terra approach. Each sector has a specific metric to measure the carbon intensity of the activities in terms of CO₂ or CO₂ equivalent (column d), except for the Shipping and Steel sector which are based on the alignment delta or percentage deviation. In addition, for Steel, the metric is also translated into a CO₂ intensity metric. ING does not cover the Chemicals sector due to a lack of data and the absence of external guidance to determine the scope for this sector. Please refer to the technical notes in the Sustainability Statement in the ING Group Annual Report 2025 for the detailed description of the methodologies used for the scoping of activities and the calculation of the intensity metric.

ING set portfolio targets based on pathways that are derived from the IEA Net Zero scenarios or other relevant 1.5°C scenarios from recognised and credible institutions for the Sectors. These convergence with the global IEA objectives for 2030 and 2050 and take ING's specific composition of the portfolio into account. The distance to the pathway (column f) represents the distance of the intensity level (column d) per the reference year (column e) to the 2030 target on the Sector's convergence pathway. A positive sign means that the emission intensity needs to

decrease further to meet the 2030 objective. A negative sign means that the sector has already met the 2030 target. Note that ING's CSRD Sustainability Statement also reports the remaining reduction towards the 2030 targets, which reflects the difference between the target reduction and the achieved reduction. For Shipping, this column is left blank as the metric is based on the delta that measures alignment with the pathway - ING follows the Poseidon Principles methodology and applies the DNV 1.5°C Initiative scenario.

The Target (column g) represents the intensity level for the year of reference plus 3 years on the Sector's convergence pathway. Except for Aviation and Shipping, this means the Sectors' convergence pathway intensity level for 2028. ING does not manage the portfolio on the intensity levels for the year of reference plus 3 years. ING manages the portfolio with targets for 2030 and 2040, which are derived from the 2050 global climate objectives. In the CSRD Sustainability Statement, ING also reports the required reduction from the baseline year of measurement towards the 2030 target. For more details on the transition plans please refer to the Sustainability Statement part of the Annual Report.

In this template, we have updated our metric (column d) for (1) Upstream Oil & Gas sector from outstandings to loans limits and (2) Steel from SSP alignment score to SSP percentage deviation. More detailed explanations on the changes by sector can be found in the Sustainability Statement, part of the Annual Report 2025.

Top 20 carbon-intensive firms in the world

Template 4 is showing aggregated information of ING's exposures towards the top 20 carbon-intensive companies in the world. It includes information on the average maturity of the exposures, providing some insight into how these exposures may be impacted by longer-term climate change transition risks. For more information on our decarbonising strategy for the Oil & Gas sector, we refer you to the Annual Report.

The identification of the counterparties constituting the list of the 20 companies considered to have the highest emissions is based on the most recent published list by CDP (The Carbon Majors Database - CDP Carbon Majors Report 2024) and, more particularly, the sample emission from 2016 to 2022.

The assets that are considered in this table comprise loans and advances, debt securities and equity instruments. As of December 2025, ING's total exposure towards the top 20 was € 2.5 billion, an increase of € 0.9 billion compared to December 2024. The exposure in December 2025 accounts for 0.2% of the portfolio's gross carrying amount. The increase is primarily due to the adoption of the updated CDP list, which contains a slightly different set of companies. The reported figure includes indirect financing of non-recourse discount type of invoices issued by these companies and aimed at financing their suppliers or the customers of the 20 companies considered to have the highest emissions.

The column CCM shows the portion of the exposure of these top 20 companies that contributes to climate change mitigation in alignment with the EU Taxonomy (EUT). However, following the no action letter from EBA, this column has been suspended until the end of 2026.

Climate change physical risk

'Physical risk' is defined as the risk of losses arising from any negative financial impact on the institution stemming from the current or prospective impacts of the physical effects of environmental factors on the institution's counterparties or invested assets.

Template 5 disclosed hereunder provide information on potential impact from climate-related physical risk hazards on the banking book exposure of ING.

Exposures subject to physical risk

Template 5 provides information on exposures in the banking book (including loans and advances, debt securities and equity instruments not held for trading and not held for sale) towards non-financial corporates, on loans collateralised by immovable property and on repossessed real estate collateral that are exposed to chronic and/or acute climate-related hazards, with a breakdown by NACE economic sector.

Further, the ITS mentions that a breakdown of the exposures by geography of the location of the activity of the counterparty or of the collateral should be disclosed. Based on a best effort basis, for the NACE sectors we used the country of residence of the counterparty to define the geographical breakdown rather than the requested location of the activity.

Determination of geographical areas

The ITS stipulates that the breakdown shall cover the geographical areas exposed to negative impact from climate change physical events. Based on this, ING decided to disclose separate templates for countries with the highest exposure, besides the consolidated template reflecting the entire ING portfolio exposed to negative impact from climate change physical events. As the NUTS classification is only defined for EU member states, and knowing that ING has significant exposure outside of the EU, ING preferred to use the country breakdown for the geographical overview.

Sensitivity methodology

In absence of clear guidance whether banks should report physical risk excluding or including supporting measures (i.e. inherent or residual risks) such as insurance coverage or government schemes, and based on the discussions in the industry, we decided to disclose the inherent risk (also market practice) as information on the supporting measures is not readily available for all the physical risk factors or all exposures. Besides, residual risk would not provide the risk level of information to determine which exposures are physical at risk.

For the loans collateralized by immovable property (rows 17 and 18) and NACE sectors for Business Banking clients, we collected granular location data and matched it with individual climate hazards assessed with an ING tool that has been internally developed. During this process, the collaterals were assessed against 3 chronic and 6

acute (2 chronic and 1 acute specific for the Netherlands) different climate risk hazards using their geographical location. The climate risk hazards have been mapped and aggregated into acute and/or chronic events as required in the ITS. For each asset, the level of risk is classified between low and high. For a specific collateral, the asset is considered at risk for acute (respectively chronic) if at least one of the hazard levels of risk within the acute (respectively chronic) hazards is high. Additionally, these levels of risk are provided for three different time horizons, and as the ITS suggests, the maturity of the loan was used to determine which time horizon to use in the assessment.

In terms of methodology, for the NACE sectors (rows 1 to 17), we have used a combination of resources. For business banking clients, the location of its headquarters (where the company was registered) was used to assess physical risk. For these counterparties, the internal tool was used with 4 chronic and 6 acute (1 chronic and 1 acute specific to the Netherlands) climate hazards assessed. For clients where the geolocation data is not available, estimations on the physical risk scores were based on the available ones, per country and subsector. It was decided to apply a different approach for wholesale and business bank exposures. This is due to a single location being a reasonable characterisation of the physical risk for business bank exposures. Wholesale exposures, on the other hand, may have multiple locations which have varying financial importance for a counterparty. Hence, a single approach was deemed inappropriate for the full book. Moreover, the wholesale approach is also in line with the one used for the double materiality assessment.

The wholesale bank assessment approach uses 2 chronic and 6 acute physical risks of each NACE sector. In this approach, focus is on the sector of operation and physical risk transmission channels as opposed to the head office location. Moreover, as wholesale counterparties may be affected by a range of acute and chronic physical risks either directly or through their supply chain, physical risk exposure for these counterparties is deemed to be a combination of both acute and chronic physical risk.

Compared to December 2024 a couple of improvements have been made to the model which has increased the exposure sensitive to physical risk. On the one hand, ING has implemented local and more granular maps for some of the hazards considered in the assessment, as well as improved the geolocation accuracy which is used to run the physical risk tool. On the other hand, the methodology of some metrics has been reviewed and updated to better reflect risk dynamics.

Consolidated table and breakdown per sensitive geographical area

This table represents the sensitivity exposure for the consolidated ING portfolio. From the € 56.9 billion of our portfolio that is sensitive to physical risk, € 22.3 billion (39%) is related to acute climate change events. The sensitive portfolio increased compared to last year following methodology updates described above. Based on the size of our portfolio, Belgium, The Netherlands and Germany, covering 62% of our portfolio, are separately reported.

In August 2025, the EBA issued a no-action letter confirming the postponement of ESG Templates 6-10, consequently, these templates are not included in this publication.

Other risks

Non-financial risk

Risk Management Objectives and Policies

The bank maintains a comprehensive Non-Financial Risk (NFR) Management Framework aligned with regulatory requirements and supervisory expectations. The framework defines the strategy for identifying, assessing, controlling, mitigating, and monitoring operational risks across all business lines.

The bank's policies include:

- A clearly defined governance structure
- A standardised operational risk taxonomy
- Minimum control expectations
- Escalation and reporting protocols

provide strategic direction and receive regular updates on operational risk developments.

Scope and Nature of the Operational Risk Measurement System

The bank applies the Standardised Measurement Approach (SMA) to calculate Pillar 1 capital requirements for operational risk.

Operational risk events and associated data are recorded and managed within iRisk, which functions as the bank's central repository and single source of truth for NFR information. iRisk captures:

- Operational loss events, including gross and net loss amounts
- Accounting, creation, discovery, and event start dates
- Internal recoveries and insurance recoveries
- Data generated by NFR processes (issues, risks, controls, risk assessments, audit findings, policies, etc.)

This comprehensive system supports regulatory capital calculations, risk assessments, scenario analysis, and internal reporting.

Operational Risk Reporting Framework

Operational risk information is consolidated through the Non-Financial Risk Dashboard (NFRD), which presents key indicators, material incidents, control performance, thematic developments, and emerging risks.

These elements ensure consistent and proactive management of operational risks throughout the organisation.

Structure and Organisation of the Operational Risk Management Function

The bank applies the three-lines-of-defence model to ensure effective segregation of duties and independent oversight.

- **First Line of Defence – Business Units**
Responsible for identifying, managing, and mitigating operational risks inherent in daily processes and activities.

- **Second Line of Defence – Corporate Operational Risk Management (CORM)**
Provides independent oversight, sets policies and minimum standards, challenges risk assessments, and monitors the effectiveness of the risk management framework.

- **Third Line of Defence – Internal Audit**
Delivers independent assurance on the adequacy, design, and operational effectiveness of risk management, control, and governance processes.

Oversight is further supported by the Non-Financial Risk Committees (NFRCs) and the Board Risk Committee, which

Reports are distributed regularly to senior management, risk committees, and the Board. Formal escalation mechanisms ensure that material losses, significant control failures, or policy breaches receive timely and adequate management attention.

Policies and Strategies for Risk Mitigation and Risk Hedging

The bank employs a broad range of mitigation strategies to reduce exposure to operational risk, including:

- Strengthening internal controls
- Process redesign and automation
- Employee training and awareness programmes
- Business continuity planning and crisis preparedness

Risk transfer mechanisms are used where appropriate, such as insurance policies covering fraud, cyber incidents, and other specific operational risk categories.

The effectiveness of internal controls is assessed regularly through testing and monitoring activities. Outcomes are reported through governance channels and drive continuous improvements in the operational risk management framework.

Crypto assets

ING has no material exposure on crypto assets, hence the CAE1 is currently not applicable.

Compliance risk

Whistleblower

ING deems it's important that ING employees, former employees, candidates, and parties with whom ING has a business relationship (such as contractors, subcontractors and suppliers) can report, anonymously or not, alleged irregularities ('Concerns') regarding accounting or auditing matters, as well as any suspected or actual criminal conduct, unethical conduct or other misconduct, including a (suspected) breach of (EU) law, within the company,

Whistleblower concerns reported

in accordance with its Whistleblower Policy. ING exercises the utmost care to protect the confidentiality of such a report and the anonymity of the Whistleblower, within the limits as defined by applicable laws and regulations. ING will not discharge, demote, suspend, threaten, harass or in any other way harm a whistleblower who has reported a Concern in good faith or of any person who participates or has participated in an investigation following a reported Concern.

Concerns are recorded in accordance with specific categories, as represented in the table below. The overview is limited to concerns reported through the dedicated whistleblower channels as an alternative to standard reporting and escalation channels. The Concerns are reported periodically (in numbers and on content) via the Chief Compliance Officer up to the level of the Supervisory Board.

Remuneration

Introduction

This 2025 remuneration disclosure provides detailed information on ING's remuneration principles and practices for Identified Staff, including members of the Executive Board and Management Board. Additionally, it demonstrates how ING is complying with applicable remuneration regulations in the financial services sector.

The data presented is based on policies and processes applicable in 2025 and relates to performance year 2025. Where we report for CRR disclosure, this includes the Pillar III disclosure.

This report should be read in conjunction with the Remuneration report on pages 60 to 86 of ING's Annual Report 2025.

Qualitative information

Identified Staff selection

ING's selection of Identified Staff is based on the European Banking Authority's Regulatory Technical Standards (RTS) of 25 March 2021.

The RTS comprises qualitative and quantitative selection criteria. ING has carefully considered how to apply these criteria and, based on this, has identified positions and individuals that qualify as Identified Staff.

The selection and deselection of Identified Staff is an ongoing process to reflect staffing and organisational changes. ING reviews its application of Identified Staff selection criteria annually and, if necessary, amends this process to comply with applicable regulations.

The number of Identified Staff at ING increased in 2025 (768) compared to 2024 (761).

Performance management

Performance management is a core people management process at ING. It aligns individual performance objectives with ING's strategy and priorities in order to build a long-term and successful business for all its stakeholders

within its risk appetite. Performance management is linked to remuneration and aims to reward for performance and not reward for failure.

Performance management supports ING's long-term interests and remuneration is a part of this. Assessing the performance of Identified Staff, and subsequently awarding variable remuneration to those who qualify, is carried out as a part of a multiple-year framework. This longer-term performance management horizon ensures variable remuneration remains 'at risk' throughout the deferral period by means of a possible holdback and /or clawback, as well as the fact that the equity part is subject to share price fluctuations.

Variable remuneration is linked to non-financial and financial performance. At least 50 percent of the variable remuneration award must be based on non-financial performance criteria. In addition, employees in control functions (Risk, Compliance and Audit), predominantly have non-financial targets. Variable remuneration takes into account group performance, business line performance and individual performance. Undesired risks that were taken, or compliance issues that were not apparent when the variable remuneration was awarded, are taken into account at every deferred vesting of variable remuneration.

Remuneration philosophy and governance

Remuneration philosophy

The primary objective of ING's remuneration philosophy is to attract, retain and motivate leaders and employees with the right values, skills, and behaviours, to support ING's ambition to be the best European bank. We refer to the Remuneration report of the Annual Report for further details on the remuneration philosophy.

ING's remuneration principles apply to all staff and are embedded in the ING Remuneration Regulations Framework (IRRF). The IRRF complies with relevant international and local legislation and regulations. It sets specific requirements for Identified Staff, control functions, the members of the Executive Board and the Management Board (defined as Management Function in this disclosure). All business units in countries where ING is located and all majority-owned entities must adhere to this framework and are obliged to sign a certificate stating that their remuneration principles comply with the IRRF. The only applicable deviations are those based on mandatory local legislation or in a limited transformation period (e.g. negotiations with employee representative bodies).

Remuneration requirements for Identified Staff

Fixed remuneration

Fixed remuneration for Identified Staff is sufficiently high to reward for the respective level of expertise, skills and range of responsibilities required for fulfilling a specific job in a business unit and region. The level of fixed remuneration is sufficiently high to allow a fully flexible approach to variable remuneration, including the possibility of paying no variable remuneration.

Benefits

Like all other staff, Identified Staff are eligible to receive employee benefits such as pension, medical or accident insurance. Benefits are regulated locally and follow market practices and may therefore differ on a local level. ING does not award discretionary pension benefits.

Variable remuneration

Variable remuneration, where applicable, is primarily focused on creating long-term value and is based on individual, business line and Group performance criteria. Where Identified Staff qualify for variable remuneration, it is subject to specific and/or regulatory conditions. These conditions aim, in part, to ensure the variable remuneration is aligned with ING's ongoing risk profile over a longer period.

With respect to variable remuneration for Identified Staff the following generally applies¹:

Variable remuneration is split into two parts:

1. An upfront award, which is delivered for a maximum of 50 percent in cash and a minimum of 50 percent in shares or other equity-linked instruments;
2. A deferred award, which is delivered for a maximum of 50 percent in cash and a minimum of 50 percent in shares or (in a few countries) other equity-linked instruments.²
 - A minimum of 40 percent of variable remuneration is deferred over a period of four to five years (depending on job position), typically with a tiered vesting schedule.
 - A retention period is applied to all non-cash elements post vesting. Note that for the members of the Executive Board and Management Board variable retention periods are applied to satisfy both; five years following the date of the award and one year following the date of the vesting.
 - Vesting is conditional on continued employment, provided limited exceptions.

ING applies different percentages to the upfront and deferred portions of variable remuneration, varying from 40 percent to 60 percent upfront, depending on job position.

ING benefits from the derogation as laid down in Article 94(3)(b) of Directive 2013/36/EU (the proportionality principle) for Identified Staff whose variable remuneration (i) does not exceed a total amount of €50,000 per year and (ii) does not represent more than 10 percent of the staff member's total remuneration. Proportionality means that in such case, no deferral or pay-out in instruments need to be applied. The number of Identified Staff that benefits from these derogations is 20. The total remuneration of Identified Staff that benefits from the derogations amounts to €4,096,627, consisting of €3,884,627 of fixed remuneration and €211,999 of variable remuneration.

¹ Subject to local jurisdictional deviations

² For the Executive Board the full total variable remuneration is paid out in shares.

Sign-on/buy-out arrangements

Sign-on and buy-out arrangements are types of remuneration that are only awarded in exceptional cases and relate to the start of employment. The buy-out arrangement or sign-on arrangement are awarded under specific conditions.

Sign-on arrangements are excluded from the variable remuneration ratio for the first performance period, where the sign-on arrangement is awarded to a new staff member who was hired before the first performance period starts.

In the event of a buy-out arrangement, ING compensates for the loss of deferred variable remuneration awarded by a prior employer that was forfeited as a direct result of joining ING. The buy-out arrangement should not compensate the new staff member for a loss of variable remuneration or for variable remuneration that has already been compensated by ING or the previous employer. Written evidence of the forfeit needs to be provided to ING. The value of the forfeited deferred shares or other instruments is determined based on the fair market value at the commencement date of employment.

For buy-out arrangements, remuneration requirements, such as but not limited to deferral, retention periods, pay out in instruments, holdback and clawback, will apply. Buy-out arrangements are subject to the vesting schedule of the previous employer (adjusted to ING vesting dates) and are awarded in line with regulatory requirements.

Severance

Severance payments are compliant with the remuneration regulations, including locally applicable employment law. ING applies the principle of 'no reward for failure'.

ING will not pay out any form of severance payment to a staff member in the event of:

- early termination of the employment relationship at the initiative of a staff member, unless this results from seriously imputable acts or failures on the part of ING;
- seriously imputable acts or failures by the staff member in the performance of their duties; or
- the staff member continues to work for ING in another function.

The maximum severance payment that can be paid out to daily policymakers will amount up to 100 percent of their annual fixed remuneration.

The amount of the severance payment is typically determined according to a predefined, generic calculation method and/or criteria as set out in the applicable local severance policy. Severance proposals for members of the Executive Board and Management Board are decided on by the Supervisory Board but are contractually limited to 100 percent of their annual fixed remuneration.

Variable remuneration cap

Based on applicable laws and regulations, ING applies maximum percentages of variable remuneration compared to fixed remuneration for different categories of staff. ³⁴

Geographic scope	Staff categories	Maximum percentage
Netherlands	Staff (mainly) working in the Netherlands and solely remunerated on the basis of the collective labour agreement (CLA)	20% individual
Netherlands	Staff (mainly) working in the Netherlands whose remuneration does not exclusively follow the CLA	20% on average 100% individual ³
EEA	Staff (mainly) working inside the European Economic Area (EEA) and outside the Netherlands	100% individual
Non-EEA	Staff (mainly) working outside the EEA	100% individual which may be increased on an individual level to 200% subject to shareholders' approval ⁴

Pre-award and post-award assessment process; adjustment, holdback and clawback

Based on the remuneration regulations, specific risk adjustment mechanisms must be applied to the pay-out process of variable remuneration for Identified Staff. To this end, ING operates a so-called pre-award and post-award assessment process when determining variable remuneration. All awards are subject to regulatory maximum variable remuneration percentages.

The pre-award assessment process aims to consider potential risk adjustments on a current and future risk basis. As part of this process, ING takes into account Group performance, business line and individual performance, as well as a capital test. In addition, risk requirements apply to all Identified Staff in so-called risk-taker roles. These risk requirements set the minimum standards to be met during the performance year. Deviation from these standards may lead to a downward adjustment of variable remuneration (risk modifier).

The post-award risk assessment process analyses whether the outcomes of the initial pre-award risk assessment process were correct. This can, and in certain situations should, result in a downward adjustment of variable remuneration by applying a holdback (i.e. forfeiture of up to 100 percent of the awarded and unvested variable re-

muneration) and/or clawback (surrender of up to 100 percent of the paid or vested variable remuneration). Any decision to apply holdback or clawback to an Identified Staff is at the discretion of the Supervisory Board.

ING sets specific criteria (as outlined in the table on the right) for the application of holdback or clawback provisions. Depending on the criterion used, ING will apply either a mandatory (in a case that falls under criterion 1 and/or 2) or discretionary (in a case that falls under criterion 3 and/or 4) adjustment to an individual's variable remuneration reduction. The mechanisms at ING's disposal include (i) in-year variable remuneration reduction which is applied to non-deferred variable remuneration, (ii) holdback which is applied to deferred variable remuneration and/or (iii) clawback which is applied to vested or paid variable remuneration.

³ Within ING this exemption is only used for a limited group of employees (i.e. employees meeting one or more of the following criteria: (i) very specific and unusual circumstances, (ii) exceptional talent, (iii) a unique job function.

⁴ In 2021, the Annual General Meeting voted in favour of continuing to increase the variable remuneration percentages to 200 percent for performance years 2022 to 2026 for no more than 1 percent of ING staff globally. Related to 2025, 30 Identified Staff received variable remuneration exceeding 100 percent. At the 2026 AGM, we will ask for a new mandate to apply an increased maximum percentage of up to 200% for employees outside the EEA for further period of five performance years, from 2027 until 2031.

Ex post risk adjustment criteria

Criterion 1.

The staff member failed to meet appropriate standards of fitness or propriety

Sub criterion 1.a.

Engaging in conduct or acts considered fraud or other types of criminal activities.

Sub criterion 1.b.

Serious misbehaviour or error by a staff member, including a serious breach of:

- (i) fundamental principles set out in the Dutch banker's oath and its foreign counterparts,
- (ii) internal codes of conduct or other internal rules, especially those concerning risk, or (iii) his/her employment contract, relevant laws or regulations.

Criterion 2.

The staff member participated in or was responsible for conduct which resulted in significant losses to ING or any of the legal entities in its group

Sub criterion 2.a.

In the event of specific conduct that leads to the material re-statement of ING annual accounts and/or significant (reputational) harm to ING or any of its subsidiaries or affiliates.

Criterion 3.

Payment of the VR award would be unacceptable according to the principles of reasonableness and fairness.

Sub criterion 3.a.

Whether the Institution and/or the business unit subsequently suffers a significant downturn in its financial performance (e.g. specific business indicators).

Sub criterion 3.b.

Whether the Institution and/or the business unit in which the staff member works suffers a significant failure of risk management.

Sub criterion 3.c.

Significant increases in the Institution's or business unit's economic or regulatory capital base.

Sub criterion 3.d.

Any regulatory sanctions where the conduct of the staff member contributed to the sanction.

Criterion 4.

The VR payment was made on the basis of incorrect information relating to the achievement of the targets underlying the VR award or circumstances that the VR award depended upon.

Remuneration governance

The Remuneration Committee prepares the discussion and decision-making within the Supervisory Board and reviews, assesses and recommends actions to the Supervisory Board. The Remuneration Committee will prepare decisions on remuneration to be taken by the Supervisory Board, in particular regarding the remuneration of individual members of the Executive Board, Management Board and senior control functions as well as of other Identified Staff and other employees whose total annual remuneration is awarded at €1,000,000 or more.

The Remuneration Committee is supported by the Finance, Risk, Audit, Compliance, Legal and HR departments. Moreover, as set out in the IRRF, other relevant stakeholders are involved in the design of remuneration policies as well. To ensure the Remuneration Committee receives adequate and accurate information, there are delegated commissions and business line compensation committees in place. In addition, remuneration is a key topic of annual review by Audit.

There is a strong alignment and cross-participation between the Remuneration Committee, Risk Committee, Nomination and Corporate Governance Committee and ESG Committee to support effective performance and remuneration decision-making.

On 31 December 2025, the members of the Remuneration Committee were Herna Verhagen (chair), Margarete Haase, Karl Guha and Harold Naus.

The Remuneration Committee met seven times in 2025.

As an annual recurring topic, the Remuneration Committee reviewed the remuneration report by way of benchmarking and alignment to shareholder expectations in order to further improve it. In addition, the Remuneration Committee discussed the progress and performance on the annual targets set for the EB and MBB, the EB and SB remuneration policies update (which were approved during the 2025 AGM), SB and EB remuneration matters including the benchmarking results (for further information see Herna Verhagen's letter on remuneration), the identified staff and high earner-related remuneration matters based on ING's remuneration governance structure, the variable remuneration and the application of ING's accompanying VRAM and updates to ING's Remuneration Regulations Framework.

The services of the following external consultants were used with regards to remuneration: Stibbe, Willis Towers Watson, Aon, Korn Ferry Hay Group and PricewaterhouseCoopers. These are independent consultants who, at the request of ING, provide advice.

The roles and responsibilities of the Remuneration Committee of ING Bank N.V. are outlined in the Charter of the Remuneration Committee. These are similar to the roles and responsibilities of the Remuneration Committee of ING Groep N.V., as outlined in the charter of that committee, which is available on ING's corporate website (www.ing.com).

Quantitative information

The following tables show the remuneration awards made by ING for Identified Staff for the performance year 2025.

Table 1 – Total fixed and variable remuneration awarded to Identified Staff

Appendices

Appendix B: EU LI 3: Outline of the differences in the scopes of consolidation (entity by entity)

ING's internal Securitisation Special Purpose Entities (SSPEs) without Significant Risk Transfer (SRT) primarily serve funding and liquidity needs, including contingent liquidity arrangements.

These entities on a stand-alone basis have a limited balance sheet size, as the underlying assets remain on ING's balance sheet. ING applies a look-through approach to the retained receivables to ensure that all underlying risks are appropriately captured.

Regarding article 436(g), ING currently does not make use of the option to exclude small entities from its scope of consolidation. Further, on article 436(h), ING does not apply a waiver for the application of prudential requirements on an individual basis for any ING subsidiary.

EU LI3 - Outline of the differences in the scopes of consolidation (entity by entity)

Name of the entity	Method of accounting consolidation	Method of prudential consolidation					Description of the entity

Disclaimer

Certain of the statements contained herein are not historical facts, including, without limitation, certain statements made of future expectations and other forward-looking statements that are based on management's current views and assumptions and involve known and unknown risks and uncertainties that could cause actual results, performance or events to differ materially from those expressed or implied in such statements. Actual results, performance or events may differ materially from those in such statements due to a number of factors, including, without limitation: (1) changes in general economic conditions and customer behaviour, in particular economic conditions in ING's core markets, including changes affecting currency exchange rates and the regional and global economic impact of the invasion of Russia into Ukraine and related international response measures (2) changes affecting interest rate levels (3) any default of a major market participant and related market disruption (4) changes in performance of financial markets, including in Europe and developing markets (5) fiscal uncertainty in Europe and the United States (6) discontinuation of or changes in 'benchmark' indices (7) inflation and deflation in our principal markets (8) changes in conditions in the credit and capital markets generally, including changes in borrower and counterparty creditworthiness (9) failures of banks falling under the scope of state compensation schemes (10) non-compliance with or changes in laws and regulations, including those concerning financial services, financial economic crimes and tax laws, and the interpretation and application thereof (11) geopolitical risks, political instabilities and policies and actions of governmental and regulatory authorities, including in connection with the invasion of Russia into Ukraine, other existing or emerging military conflicts, the risk of further military escalation, geopolitical tensions, trade restrictions and the related international response measures (12) legal and regulatory risks in certain countries with less developed legal and regulatory frameworks (13) prudential supervision and regulations, including in relation to stress tests and regulatory restrictions on dividends and distributions (also among members of the group) (14) ING's ability to meet minimum capital and other prudential regulatory requirements (15) changes in regulation of US commodities and derivatives businesses of ING and its customers (16) application of bank recovery and resolution regimes, including write down and conversion powers in relation to our securities (17) outcome of current and future litigation, enforcement proceedings, investigations or other regulatory actions, including claims by customers or stakeholders who feel misled or treated unfairly, and other conduct issues (18) changes in tax laws and regulations and risks of non-compliance or investigation in connection with tax laws, including FATCA (19) operational and IT risks, such as system disruptions or failures, breaches of security, cyber-attacks, human error, changes in operational practices or inadequate controls including in respect of third parties with which we do business and including any risks as a result of incomplete, inaccurate, or otherwise flawed outputs from the algorithms and data sets utilized in artificial intelligence (20) risks and challenges related to cybercrime including the effects of cyberattacks and changes in legislation and regulation related to cybersecurity and data privacy, including such risks and challenges as a consequence of the

use of emerging technologies, such as advanced forms of artificial intelligence and quantum computing (21) changes in general competitive factors, including ability to increase or maintain market share (22) inability to protect our intellectual property and infringement claims by third parties (23) inability of counterparties to meet financial obligations or ability to enforce rights against such counterparties (24) changes in credit ratings (25) business, operational, regulatory, reputation, transition and other risks and challenges in connection with climate change, diversity, equity and inclusion and other ESG-related matters, including data gathering and reporting and also including managing the conflicting laws and requirements of governments, regulators and authorities with respect to these topics (26) inability to attract and retain key personnel (27) future liabilities under defined benefit retirement plans (28) failure to manage business risks, including in connection with use of models, use of derivatives, or maintaining appropriate policies and guidelines (29) changes in capital and credit markets, including interbank funding, as well as customer deposits, which provide the liquidity and capital required to fund our operations, and (30) the other risks and uncertainties detailed in the most recent Annual Report of ING Groep N.V. (including the Risk Factors contained therein) and ING's more recent disclosures, including press releases, which are available on ing.com.

This document may contain ESG-related material that has been prepared by ING on the basis of publicly available information, internally developed data and other third-party sources believed to be reliable. ING has not sought to independently verify information obtained from public and third-party sources and makes no representations or warranties as to the accuracy, completeness, reasonableness or reliability of such information. This document may also discuss one or more specific transactions and/or contain general statements about ING's ESG approach. The approach and criteria referred to in this document are intended to be applied in accordance with applicable law. Due to the fact that there may be different or even conflicting laws, the approach, criteria or the application thereof, could be different.

Materiality, as used in the context of ESG, is distinct from, and should not be confused with, such term as defined in the Market Abuse Regulation or as defined for Securities and Exchange Commission (SEC) reporting purposes. Any issues identified as material for purposes of ESG in this Annual Report are therefore not necessarily material as defined in the Market Abuse Regulation or for SEC reporting purposes. In addition, there is currently no single, globally recognised set of accepted definitions in assessing whether activities are "green" or "sustainable". Without limiting any of the statements contained herein, we make no representation or warranty as to whether any of our securities constitutes a green or sustainable security or conforms to present or future investor expectations or objectives for green or sustainable investing. For information on characteristics of a security, use of proceeds, a description of applicable project(s) and/or any other relevant information, please reference the offering documents for such security.

This document may contain inactive textual addresses to internet websites operated by us and third parties. Reference to such websites is made for information purposes only, and information found at such websites is not incorporated by reference into this document. ING does not make any representation or warranty with respect to

the accuracy or completeness of, or take any responsibility for, any information found at any websites operated by third parties. ING specifically disclaims any liability with respect to any information found at websites operated by third parties. ING cannot guarantee that websites operated by third parties remain available following the publication of this document or that any information found at such websites will not change following the publication of this document. Many of those factors are beyond ING's control.

Any forward-looking statements made by or on behalf of ING speak only as of the date they are made, and ING assumes no obligation to publicly update or revise any forward-looking statements, whether as a result of new information or for any other reason.

This document does not constitute an offer to sell, or a solicitation of an offer to purchase, any securities in the United States or any other jurisdiction.
